Study of the scaling properties in SU(2) gauge theory with eight flavors

Thursday, 17 June 2010 17:40 (20 minutes)

We present our preliminary study of the SU(2) gauge theory with 8 flavor of fermions in fundamental representation. This theory could be a candidate of the gauge theory with conformal fixed point. By studying physical observables such as running gauge coupling in twisted boundary conditions, we investigate a possible signal for a conformal behavior.
