

PHOTO CAMERA

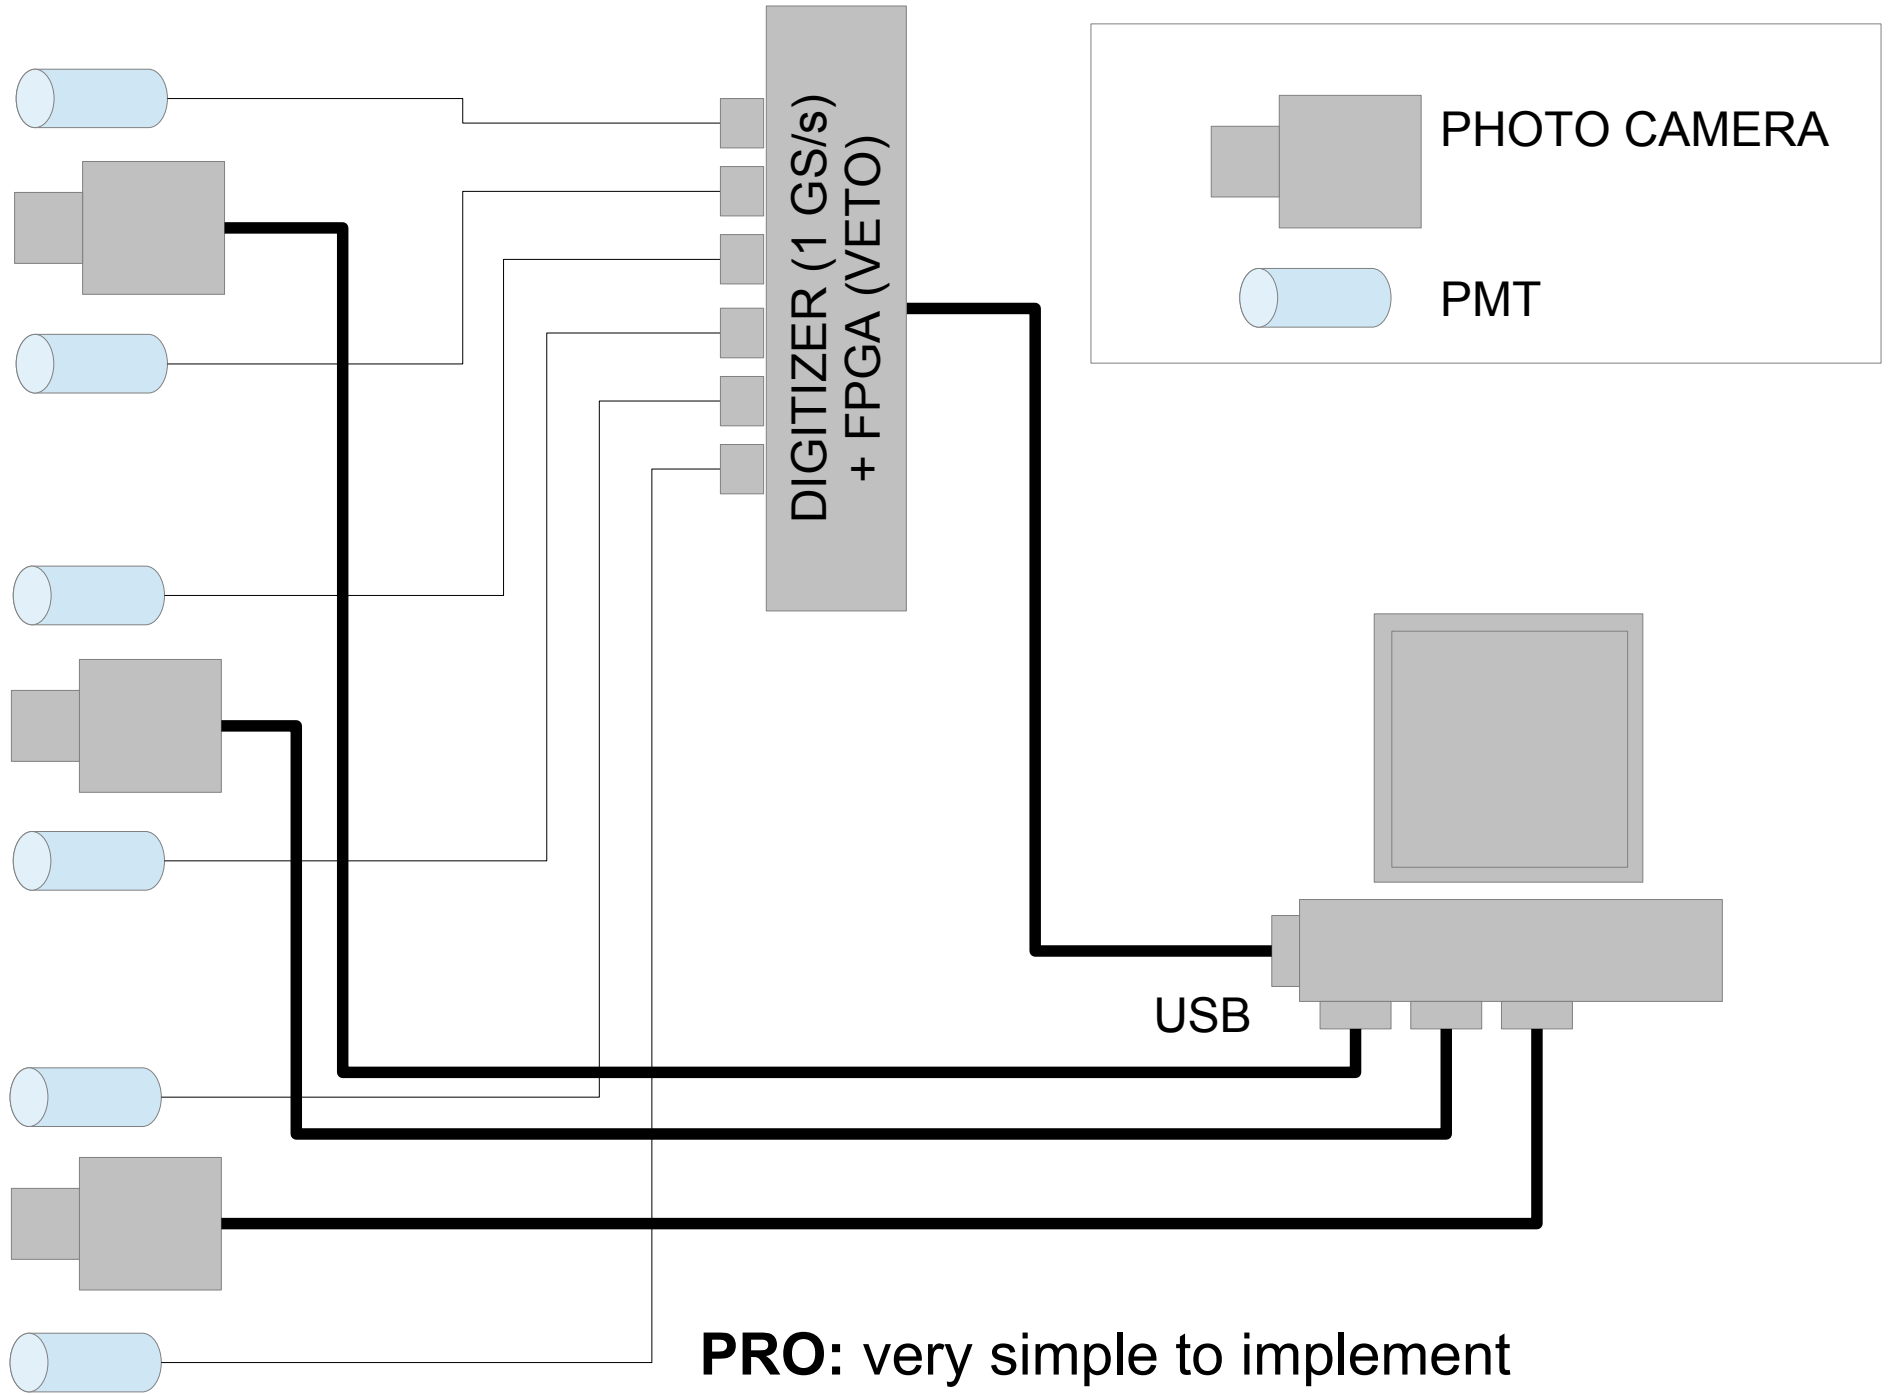

PMT

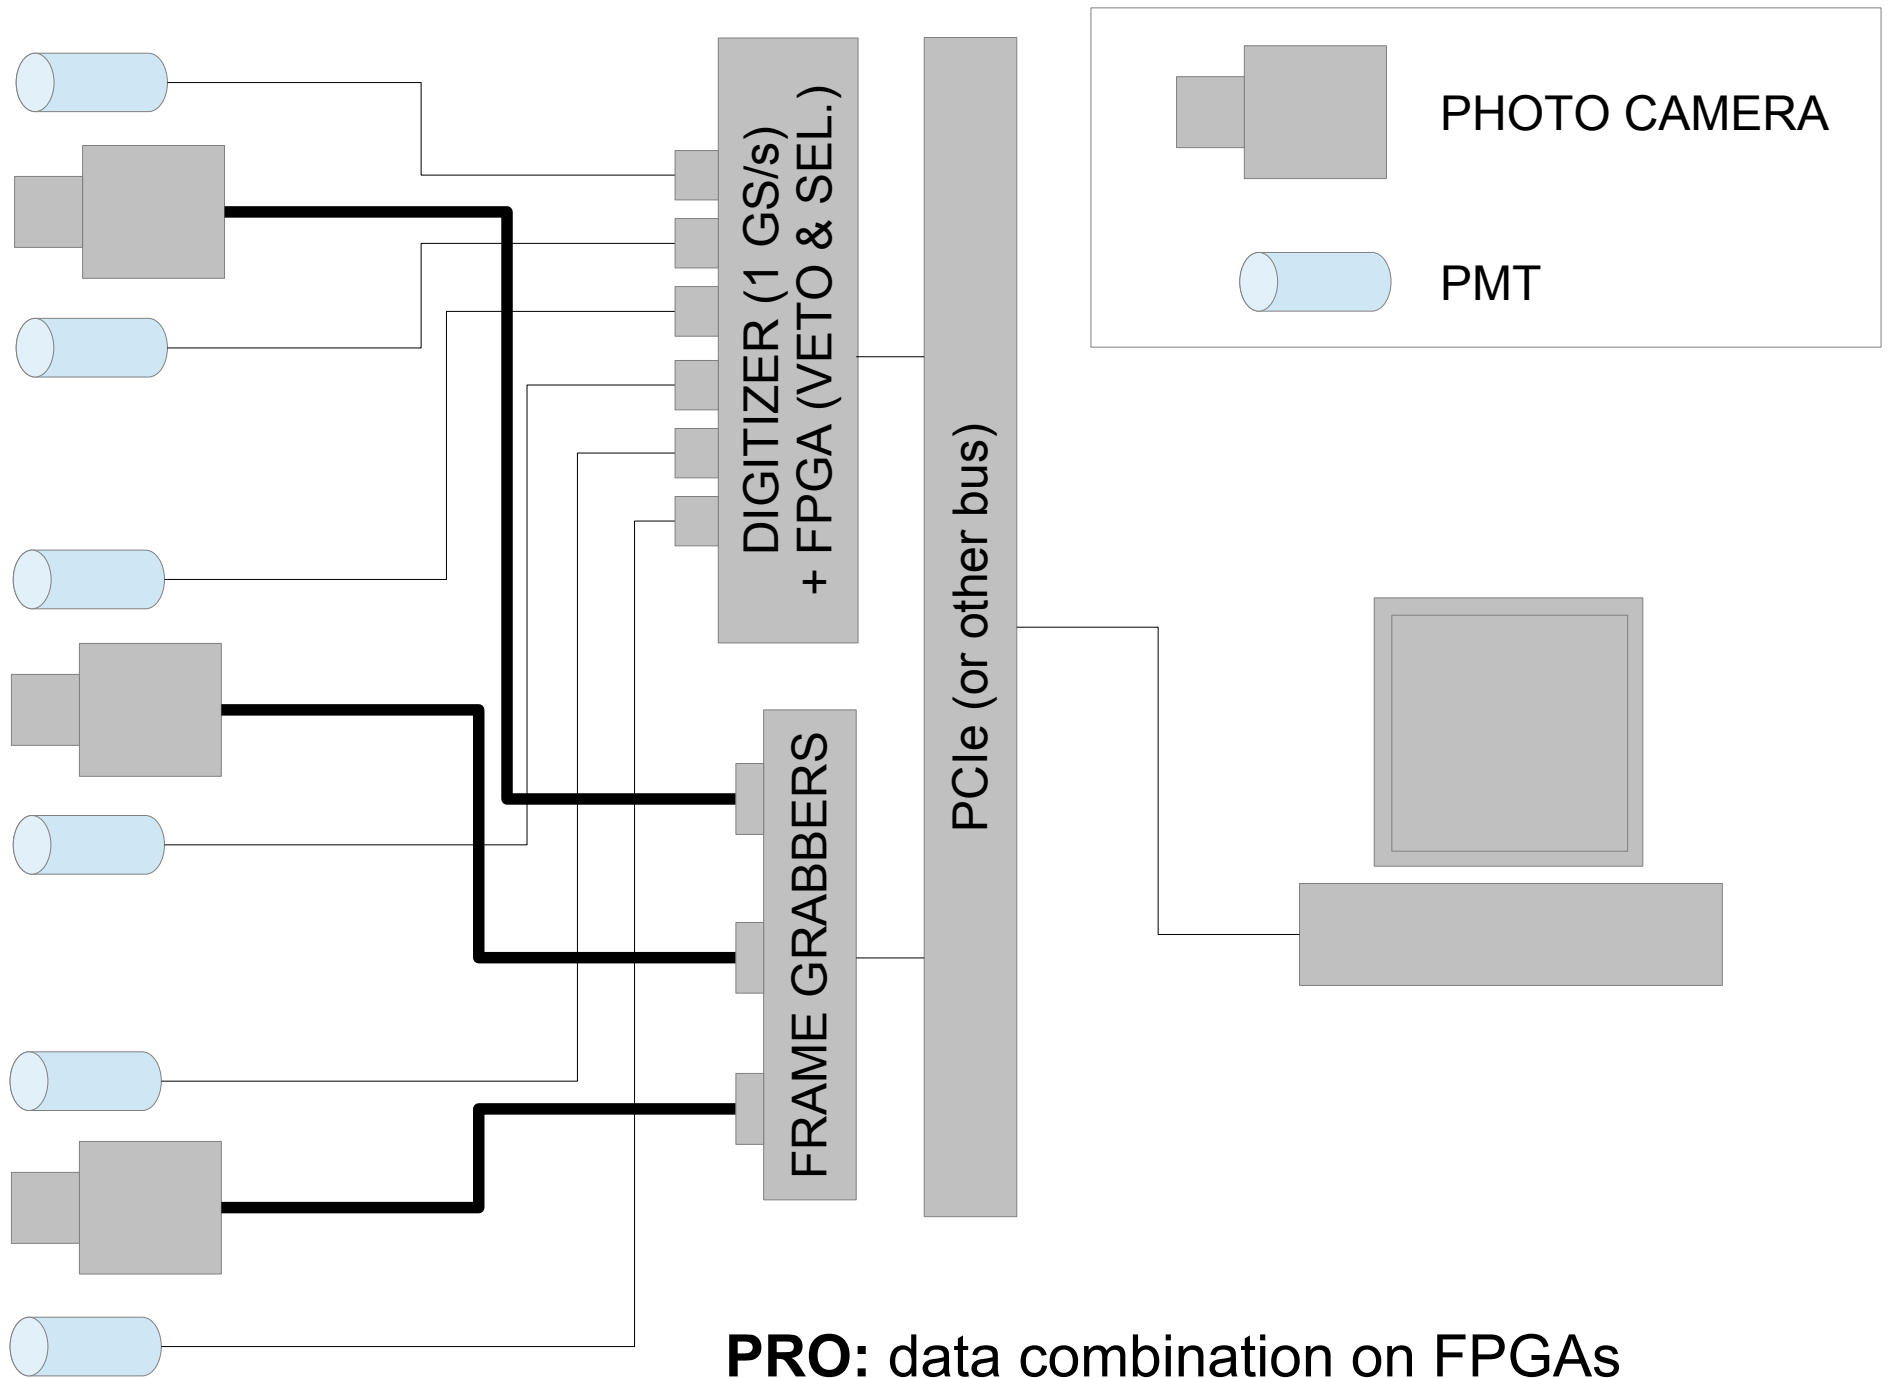

PRO: very simple to implement
CONTRA: works only for 1 camera

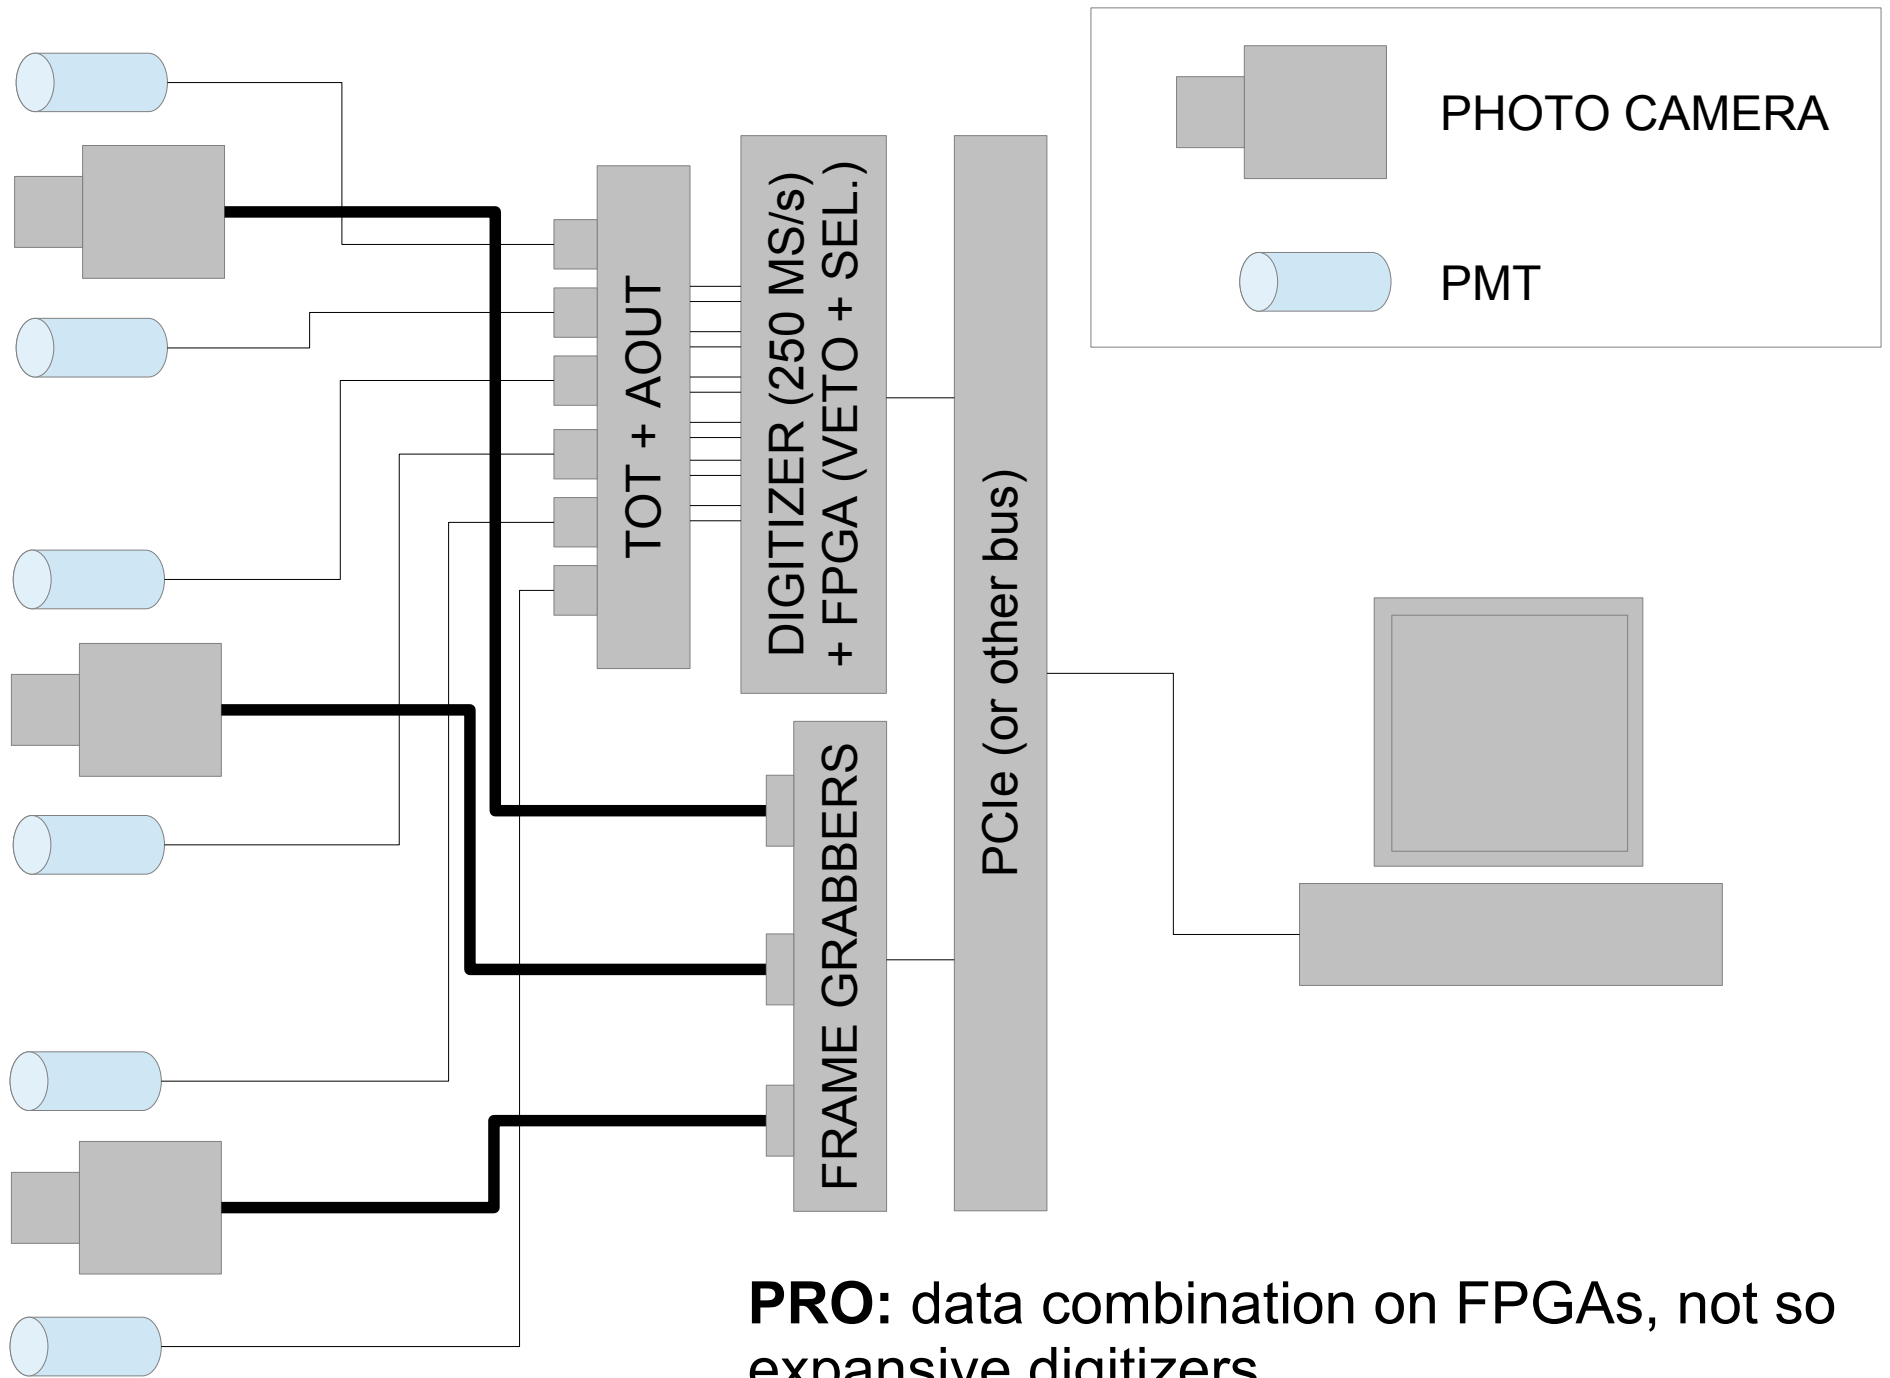

PRO: very simple to implement
CONTRA: data combination only possible on CPUs → heavy task, can need a farm;

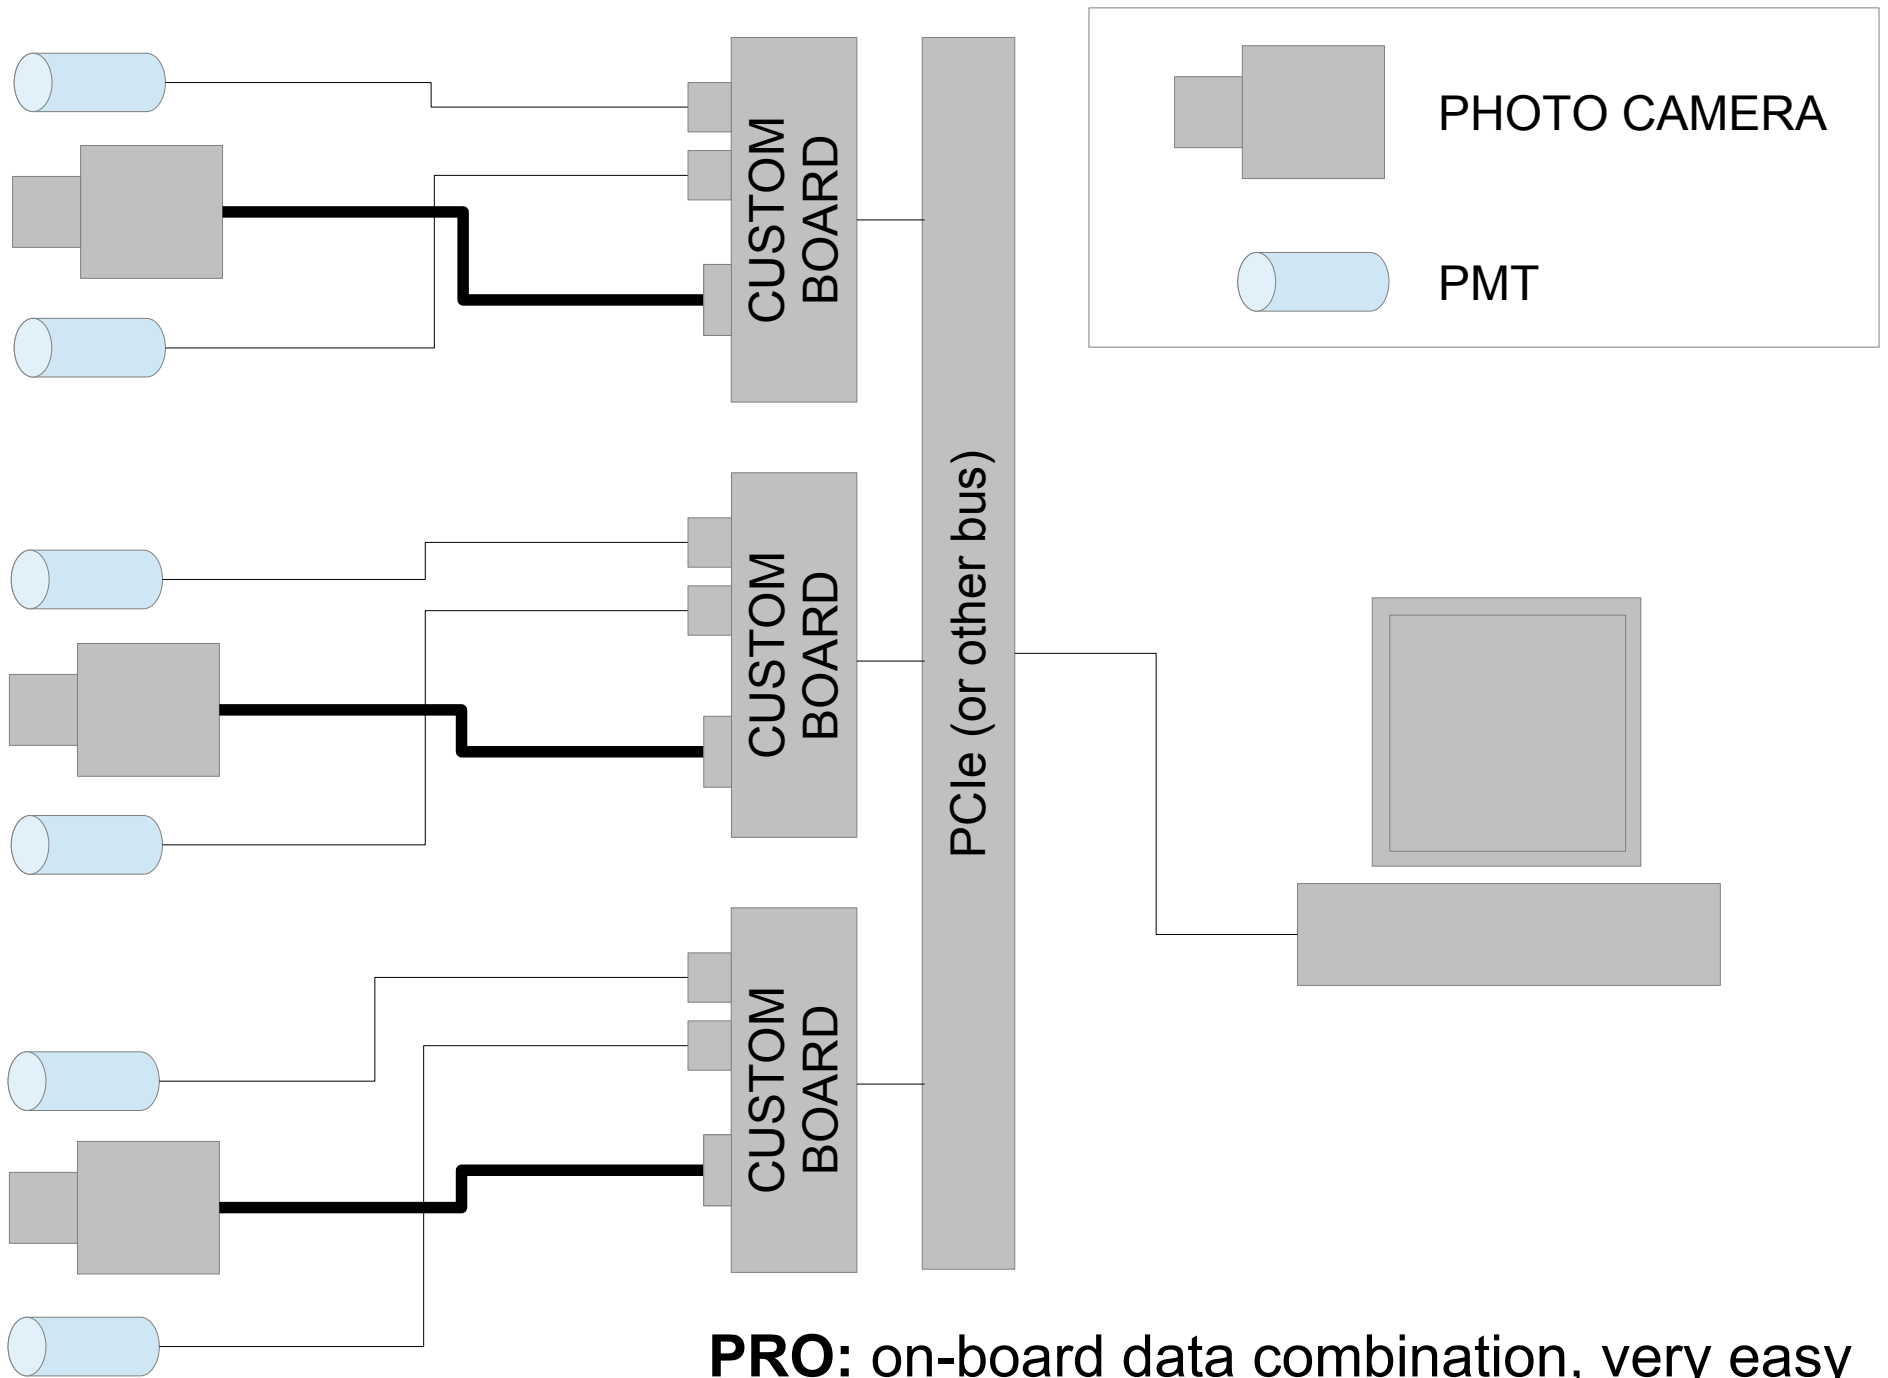

PRO: data combination on FPGAs

CONTRA: more expensive, can be difficult to scale up to many cameras/PMTs

PRO: data combination on FPGAs, not so expansive digitizers
CONTRA: can be difficult to scale up to many cameras/PMTs

PRO: on-board data combination, very easy to scale up

CONTRA: more difficult to develop
