

A large, semi-transparent graphic on the left side of the slide. It features a circular grid pattern, similar to a brain scan or a globe, with a dark, irregular shape in the center that resembles a brain or a specific anatomical structure.

DORIAN

evolving neuroimaging

status of the initiative

DORIAN (Diagnosis ORiented ANalysis)

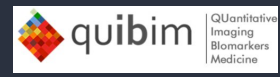

DORIAN delivers a fast and reliable tool for the quantification of medical imaging to support the early and differential diagnosis of neurodegenerative disorders. It provides clinicians and researchers with state-of-the-art robust, rater-independent and reproducible quantitative biomarkers to better evaluate the β -amyloid load in brain tissue, complementing their ability to write an informed medical report and improve on the early detection and diagnosis of neurodegenerative diseases.

Collaboration with AIMN

DORIAN - BRAIN SOFTWARE PROJECT

→ Host (& maintain) and give access to multiple research tools (amyloid-PET, FDG-PET, DATSPECT, MRI?)

→ Collect metadata / images into the first italian (normative)-database of amyloid PET images

→ Minimum image quality requirements (harmonization of acq. protocols)

→ Results visualization discussion

Metadata for this exam

Patient Name:

Birth Date:

Education:

Patient Gender: F M U

Initial subjective symptomatology: Memory Language Visuospatial Executive Apraxia Attention Other (specify)

Pre-PET clinical suspicion: MCI PossAD ProbAD (85%+) FTLD VAD DLB Other (non-specified dementia)

Comorbidity: Diabetes Cardiopathy Arterious hypertension Major internal organ disease Depression Non-specified

Evidence of atrophy (MRI): Not avail. No Yes (specify)

Evidence of hypometabolism (FDGPET): Not avail. No Yes

MMSE:

Amyloid-PET tracer:

Notes:

“Standard” atlas - cortical
25 contralateral + 1 regions

“Clinical” atlas - most explored in clinical reading

| label | region |
|-------|--|
| 1 | frontal (no basal area) |
| 2 | occipital |
| 3 | posterior parietal |
| 4 | temporal-lateral (no mesial-temporal) |
| 5 | striatus |
| 6 | thalamus |
| 7 | precuneus + posterior cingulate cortex |

Data-driven atlas

IN PROGRESS..

florbetaben

A template for each amyloid (^{18}F) tracer, built from EADC PET-2 initiative data (~50 amyloid neg / pos).

florbetapir

ANTS iterative registration (*multivariate template construction*, <https://www.ncbi.nlm.nih.gov/pubmed/20851191>). Registered on MNI by ADNI template from florbetapir.

flutemetamol

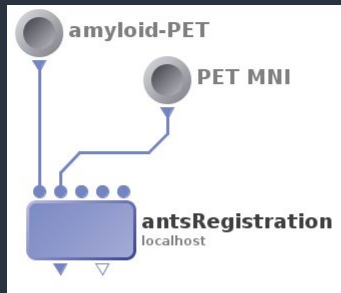

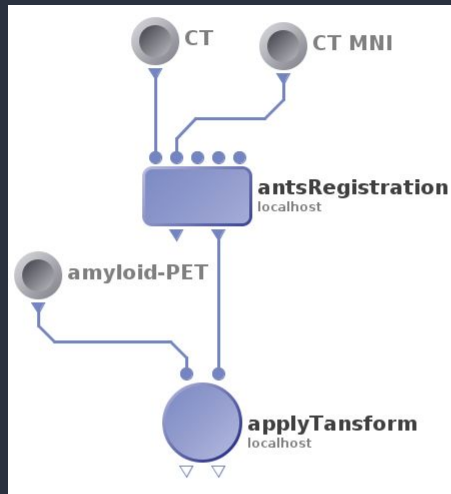

→ will be submitted as a paper

Registration & quality check

→ ANTS: PET / PET + CT (antsRegistrationSyN), CT on CT template
(<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3376197/>) and
transform applied to corresponding PET

1. Multiscale registration
2. Rigid + affine
3. MNI atlases / parcellations warped to target PET

→ Convolutional network classifier trained on good / bad registration
