

Clara CIVIT

Hi! My name is Clara Civit, I'm 25 years old and live in Barcelona. I studied environmental sciences at the University of Barcelona, since school, science has always been my passion. When I was studying at the university, I had the opportunity to do an internship in a scientific TV show at the Catalan TV. I was able to participate very actively in the program which was very enriching. Thanks to this experience I decided that I wanted to study and learn more about scientific communication.

I decided to study a master's degree in Scientific, Medical and Environmental Communication at UPF-Barcelona School of Management that I came to realize it was a promising professional pathway. During my master's I did another internship in the communications and outreach department at the Barcelona Science Park, where I wrote scientific and institutional news, intern communication, helped with social media and with the outreach department.

Currently I am working as an events and communication officer at the Institute for Bioengineering of Catalonia (IBEC), actively participating with press releases, managing the institute's Instagram account, organizing events and outreach activities. Also, at the institute, I am the communications manager for the Mechano·Control project, funded by the European Commission, within the Future and Emerging Technologies (FET) proactive program. The project has the aim to develop specific therapeutic approaches beyond the current paradigm in breast cancer treatment.

I think this school will create a space for discussion and exchange of opinions on how to communicate scientific results using all the available tools and platforms.
