MONOLITH - picosecond time stamping capabilities in fully monolithic highly granular silicon pixel detectors

Tuesday, 24 May 2022 08:47 (1 minute)

The MONOLITH ERC Advanced project aims at producing a monolithic silicon pixel ASIC with picosecond-level time stamping by using fast SiGe BiCMOS electronics and a novel sensor concept, the Picosecond Avalanche Detector (PicoAD).

The PicoAD uses a multi-PN junction to engineer the electric field and produce a continuous gain layer deep in the sensor volume. The result is an ultra-fast current signal with low intrinsic jitter in a full fill factor highly granular monolithic detector.

A proof-of-concept ASIC prototype confirms that the PicoAD principle works according to simulations. Test-beam measurements show that the prototype is fully efficient and achieves time resolutions down to 24ps.

Collaboration

Primary authors: PICARDI, Antonio (University of Geneva); MAGLIOCCA, Chiara; FERRERE, Didier (Université de Genève); MARTINELLI, Fulvio (University of Geneva); RUECKER, Holger (ihp-microelectronics); SAIDI, Jihad (University of Geneva); PAOLOZZI, Lorenzo (Université de Genève); NESSI, Marzio (CERN PH); VICENTE BARRETO PINTO, Mateus (UNIGE); RUTH MAGDALENA, Munker; VALERIO, Pierpaolo (University of Geneva); KOTITSA, Rafaella Eleni (University of Geneva); CARDARELLI, Roberto (ROMA2); CARDELLA, Roberto (Geneva); GONZALEZ, Sergio (University of Geneva); MORETTI, Theo (University of Geneva); GURIMSKAYA, Yana (University of Geneva); IACOBUCCI, giuseppe (Université de Genève)

Presenter: MILANESIO, Matteo (Université de Genève)

Session Classification: Solid State Detectors - Poster session
