Overview

Geant4 is a toolkit for the simulation of the passage of particles through matter. Its areas of application include high energy, nuclear and accelerator physics, as well as studies in medical and space science. The three main reference papers for Geant4 are published in Nuclear Instruments and Methods in Physics Research A 506 (2003) 250-303, IEEE Transactions on Nuclear Science 53 No. 1 (2006) 270-278 and Nuclear Instruments and Methods in Physics Research A 835 (2016) 186-225.

Applications

A sampling of applications, technology transfer and other uses of Geant4

Software Suggested for Use With Geant4 Applications

Building and Installing

Postinstall Setup

How to Use the Geant4 Toolkit Libraries

How to Make an Executable Program

CMake for Geant4 Developers

Getting Started

OS/Software Prerequisites

The following source/software *must* be present to build Geant4:

- Geant4 Toolkit [Source Code](#).
- C++ Compiler and Standard Library supporting the C++11 Standard:
 - Linux: [GNU Compiler Collection](#) 4.8.5 or higher.
 - It is strongly recommended to use the GCC compiler supplied by the package management system of your distribution unless this does not meet the minimum version requirement.
 - macOS: Apple Clang ([Xcode](#)) 8 or higher.
 - The command line tools must also be installed by running `xcode-select --install` from the terminal.
 - Windows: [Visual Studio](#) 2015, Community version or higher.

The compiler and standard library need to support at least the following features of the C++11 Standard:

- Template aliases, as defined in N2258.
- Automatic type deduction, as defined in N1984.
- Delegating constructors, as defined in N1986.
- Enum forward declarations, as defined in N2764.
- Explicit conversion operators, as defined in N2437.
- Override control final keyword, as defined in N2928, N3206 and N3272.
- Lambda functions, as defined in N2927.
- Null pointer, as defined in N2431.
- Override control override keyword, as defined in N2928, N3206 and N3272.
- Range-based for, as defined in N2930.

- o Tested platforms:

- + Linux, gcc-4.8.5.

Tested on 64 bit architectures (Intel or AMD) with CERN CentOS Linux 7 (CC7) (based on CentOS Linux 7).

Versions of Geant4 have also been compiled successfully on other

Linux distributions, Ubuntu, Debian, Suse or other RedHat systems.

- + MacOSX 10.14, clang-6.0 (Apple LLVM/Clang-10.0.1)

- + Windows/10 with Visual C++ 14.11 (Visual Studio 2017)

- o More verified configurations:

- + Linux, gcc-4.9.3/5.4.0/6.3.0/7.3.0/8.2.0/9.1.0, clang-5.0/7.0.

- + Linux, Intel-icc 19.0.

- + MacOSX 10.12/13 with clang-3.9/4.0

- o External dependencies

- + CLHEP-2.4.1.2, suggested for external installation of the CLHEP library.

- + VecGeom-1.1.2, for optional use of the VecGeom geometry primitives.

- o New data sets:

- + G4PARTICLEXS-2.0.

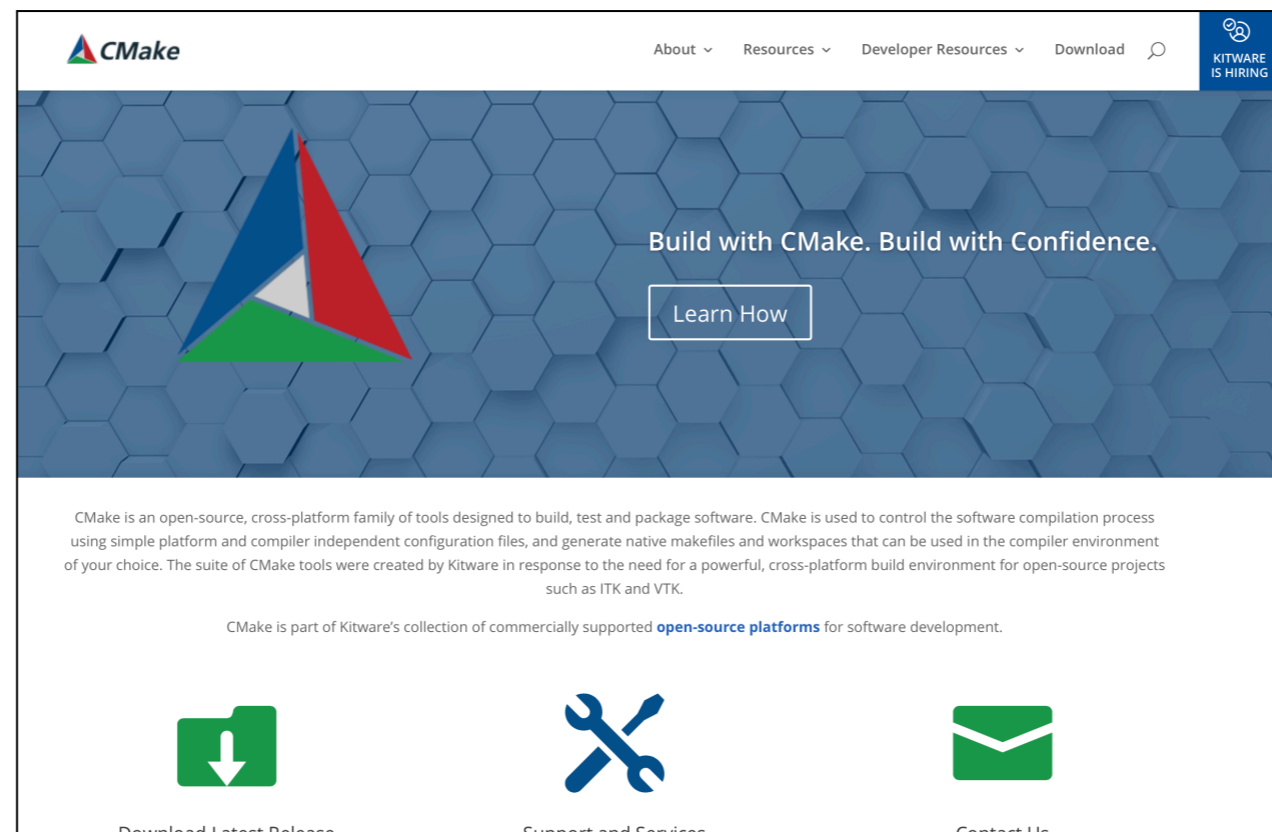

Please refer to the Geant4 User Documentation:

<http://cern.ch/geant4/support/userdocuments.shtml>
for further information about using Geant4.

- **Operating system**
 - “recent” Linux (e.g. CentOS 7), best support
 - macOS 10.10+
 - Windows 7+ (limited support, not recommended)
- **Compilers**
 - C++11 compliance
 - such as GCC 4.8.5+, clang 3.6+, Visual C++ 14.0 (2015)
- **CMake** (configuration generation tool) 3.3+
- **System libraries** (as development packages):
 - expat, xerces-c

These may or may not be necessary. Just keep this in mind when compilation fails.

Geant4 uses **CMake** to configure a build system for compiling and installing the toolkit headers, libraries and support tools. This document covers the basics of using CMake to build and install Geant4 together with an overview of the most commonly used advanced features.

- Depending on the OS installation, CMake may not be installed by default. In that case you have to install it:
 - **Linux:** it is recommended to use the CMake provided by the package management system of your distribution.

If version 3.3+ is not available:

1. **download** the latest version (<http://www.cmake.org/>)
 2. **unzip** the tar-ball
 3. **./bootstrap, make, make install**
- **macOS:** install it using the Darwin64 **dmg installerpackage**
 - **Windows:** install it using the Win64/32 **exe installerpackage**

Note: You may also want to install **ccmake** and/or **cmake-gui** tools for user-friendly configuration

- **X11** for simple graphical user interface and ray-tracing
- **OpenGL** for visualization
- **Qt4** or **Qt5** for graphical user interface
- **ROOT** for data analysis (even inside Geant4)

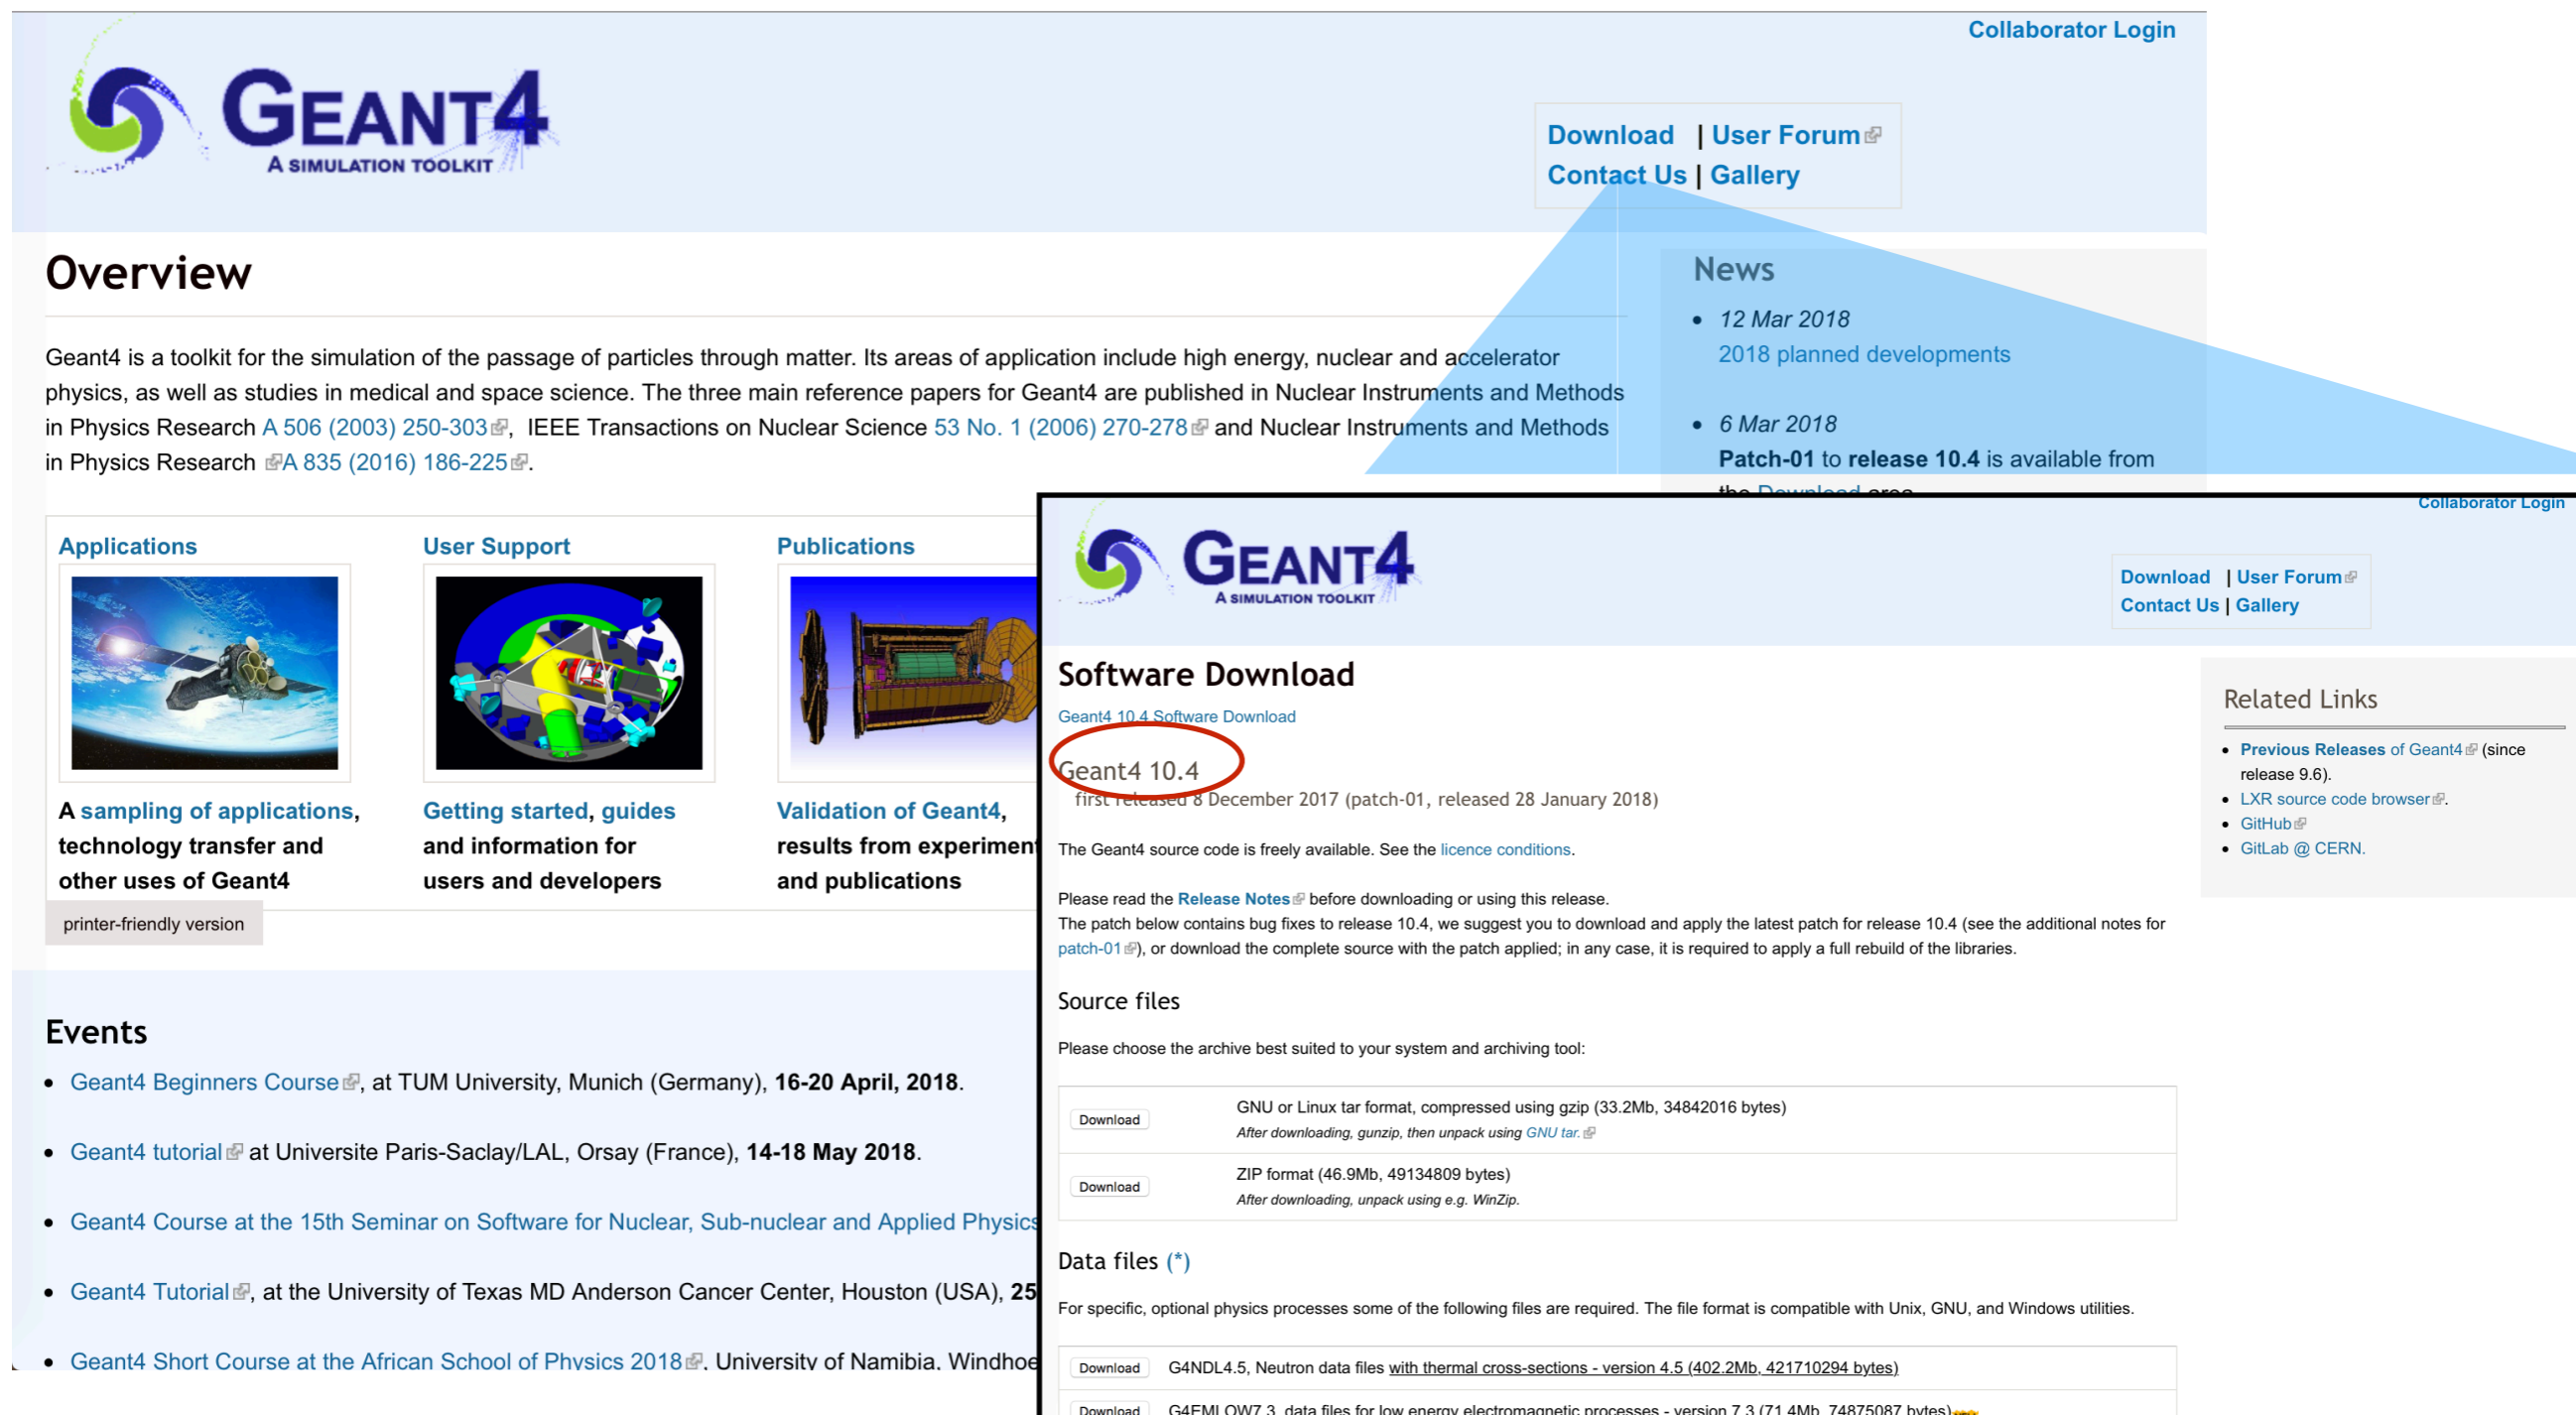

Less frequently used libraries/tools:

Motif, OpenInventor, DAWN, RayTracer X11, HepRApp, WIRED JAS Plug-in, AIDA, VRML browser, (external) CLHEP, Wt...

and now.... we can proceed with the Geant4 installation

Software Download

Geant4 10.4 Software Download
first released 8 December 2017 (patch-01, released 28 January 2018)

The Geant4 source code is freely available. See the [licence conditions](#).

Please read the [Release Notes](#) before downloading or using this release. The patch below contains bug fixes to release 10.4, we suggest you to download and apply the latest patch for release 10.4 (see the additional notes for [patch-01](#)), or download the complete source with the patch applied; in any case, it is required to apply a full rebuild of the libraries.

Source files

Please choose the archive best suited to your system and archiving tool:

Download	GNU or Linux tar format, compressed using gzip (33.2Mb, 34842016 bytes) <i>After downloading, gunzip, then unpack using GNU tar.</i>
Download	ZIP format (46.9Mb, 49134809 bytes) <i>After downloading, unpack using e.g. WinZip.</i>

Data files (*)

For specific, optional physics processes some of the following files are required. The file format is compatible with Unix, GNU, and Windows utilities.

Download	G4NDL4.5, Neutron data files with thermal cross-sections - version 4.5 (402.2Mb, 421710294 bytes)
Download	G4EMLOW7.3, data files for low energy electromagnetic processes - version 7.3 (71.4Mb, 74875087 bytes)

Data files (*)

For specific, optional physics processes some of the following files are required. The file format is compatible with Unix, GNU, and Windows utilities.

Download	G4NDL4.5, Neutron data files <u>with thermal cross-sections</u> - version 4.5 (402.2Mb, 421710294 bytes)
Download	G4EMLOW7.3, data files for low energy electromagnetic processes - version 7.3 (71.4Mb, 74875087 bytes) NEW
Download	G4PhotonEvaporation5.2, data files for photon evaporation - version 5.2 (9.6Mb, 10084513 bytes) NEW
Download	G4RadioactiveDecay5.2, data files for radioactive decay hadronic processes - version 5.2 (1.0Mb, 1057501 bytes) NEW
Download	G4SAIDDATA1.1, data files from evaluated cross-sections in SAID data-base - version 1.1 (25.2kb, 25800 bytes)
Download	G4NEUTRONXS1.4, data files for evaluated neutron cross-sections on natural composition of elements - version 1.4 (2.1Mb, 2249001 bytes)
Download	G4ABLA3.1, data files for nuclear shell effects in INCL/ABLA hadronic mode - version 3.1 (104.8kb, 107286 bytes) NEW
Download	G4PII1.3, data files for shell ionisation cross-sections - version 1.3 (4.1Mb, 4293607 bytes)
Download	G4ENSDFSTATE2.2, data files for nuclides properties - version 2.2 (283.8kb, 290632 bytes) NEW
Download	G4RealSurface2.1, <u>Optional data files for measured optical surface reflectance</u> - version 2.1 (126.0Mb, 132130413 bytes) NEW
Download	G4TENDL1.3.2, <u>Optional data files for incident particles</u> - version 1.3.2 (558.0Mb, 585100935 bytes) NEW

- Low Energy Nuclear Data (LEND) files can be downloaded from: <ftp://gdo-nuclear.ucllnl.org/>

Create the “environment”

Geant4 folder

Install

Create the “environment”

Geant4 folder

Build

**Source
code**

Install

Automatically created

G4 installation: main command

16

set the *install directory*

the directory under which the Geant4 libraries, headers and support files will be installed.

the additional external data libraries are automatically downloaded

```
$ cmake -DCMAKE_INSTALL_PREFIX=/home/user/Desktop/Geant4/geant4.10.05.p01 --install -DGEANT4_INSTALL_DATA=ON -DGEANT4_USE_OPENGL_X11=ON -DGEANT4_USE_QT=ON /home/user/Desktop/Geant4/geant4.10.05.p01
```

build the X11 OpenGL visualization driver

build the Qt visualization driver

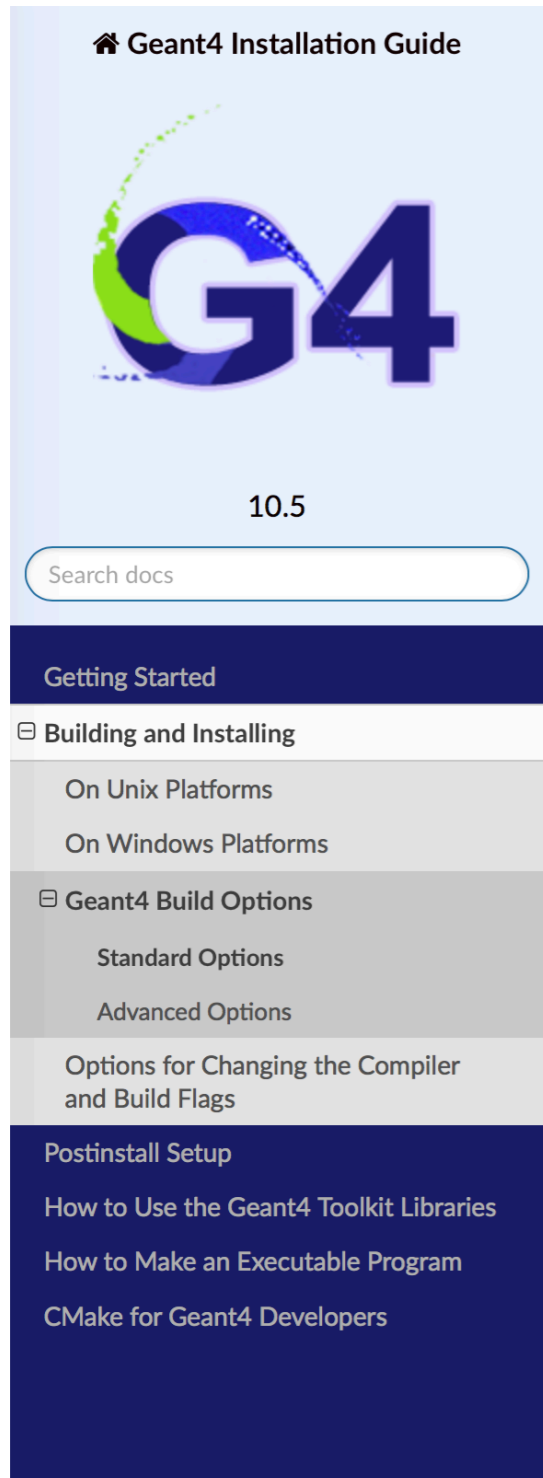

Important options:

- DCMAKE_INSTALL_PREFIX= ... installation_path
- DGEANT4_INSTALL_DATA=ON/OFF
- DGEANT4_BUILD_MULTITHREADED=ON/OFF

Further options:

- DGEANT4_USE_OPENGL_X11=ON/OFF
- DGEANT4_USE_QT=ON/OFF

.....

The screenshot shows the Geant4 Installation Guide website. At the top, it says "Geant4 Installation Guide" with a home icon. Below that is a large "G4" logo with a green and blue circular graphic. The version number "10.5" is displayed. There is a search bar labeled "Search docs". A navigation menu on the left includes "Getting Started", "Building and Installing" (with sub-items "On Unix Platforms" and "On Windows Platforms"), "Geant4 Build Options" (with sub-items "Standard Options" and "Advanced Options"), "Options for Changing the Compiler and Build Flags", "Postinstall Setup", "How to Use the Geant4 Toolkit Libraries", "How to Make an Executable Program", and "CMake for Geant4 Developers".

Advanced Options

Most installs should never need to touch these options, and are primarily to give advanced users more control over the build, enable experimental features, and to help CMake locate needed software packages. Advanced options and variables can be set like the standard ones listed earlier using `-D` arguments to `cmake`. In CMake's curses and GUI interfaces these options can be displayed by pressing `t` in `ccmake`, or clicking the 'advanced' check box in the CMake GUI.

In the list below, we only list those options most relevant for Geant4. Many additional core CMake variables are available, for which you should consult the Reference Documentation section of the [main CMake documentation](#), and specifically the sections on Variables. The following list is presented in semi-alphabetical order, with grouping by task where appropriate.

- `BUILD_SHARED_LIBS` : (DEFAULT : ON)
 - If set to `ON` build Geant4 shared libraries.
- `BUILD_STATIC_LIBS` : (DEFAULT : OFF)
 - If set to `ON`, build Geant4 static libraries.
- `CMAKE_INSTALL_BINDIR` : (DEFAULT : bin)
 - Installation directory for Geant4 Toolkit executables. It can be supplied as a path relative to `CMAKE_INSTALL_PREFIX` or as an absolute path.
- `CMAKE_INSTALL_INCLUDEDIR` : (DEFAULT : include)
 - Installation directory for Geant4 C/C++ headers. It can be supplied as a path relative to `CMAKE_INSTALL_PREFIX` or as an absolute path. The headers will always be installed in a subdirectory of `CMAKE_INSTALL_INCLUDEDIR` named `Geant4`.
- `CMAKE_INSTALL_LIBDIR` : (DEFAULT : lib(+?SUFFIX))
 - Installation directory for object code libraries. It can be supplied as a path relative to `CMAKE_INSTALL_PREFIX`, or an absolute path. When the default is used, `SUFFIX` will be set to `64` on 64bit Linux platforms apart from Debian systems.
- `CMAKE_INSTALL_DATAROOTDIR` : (DEFAULT : share)

Compiling

Start the Geant4 installation

\$ make -jN

\$ make install

and
wait....
