## WP7: Gaseous detectors

Silvia Dalla Torre

## Su scelta del management:

### Conveners della fase di formazione del Progetto:

- Gabriella Catanesi, Silvia Dalla Torre, Franco Grancagnolo, Beatrice Mandelli, Burkhard Schmidt, Guy Wilkinson

### Coordinatori attuali:

- Silvia Dalla Torre, Burkhard Schmidt

## 34 Eols related to gaseous detectors ( su 163, il 23% )

- related to RPCs: 10
- related to MPGDs: 18
- related to large volume GDs and DCs: 6

## Eols il cui contenuto e' presente (in tutto o in parte) in WP7

- related to RPCs: 3
- related to MPGDs: 3
- related to large volume GDs and DCs: 3

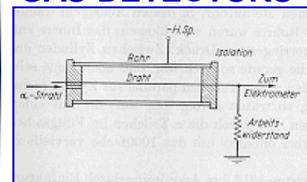

### Conveners:

- suggesting the scientifically valid ideas

### Management:

- making the choices on the base of the **overall project policy** (privileging the support to well-defined medium – term projects); also **distribution of resources among countries** considered

### About RPCs

**Eol25 (Scioli, INFN-BO)**  
**MRPCs for fast timing at high incident flux of charged particles**

**SINERGIES**  
 t-res (20 ps) and rate capability (50 kHz/cm<sup>2</sup>)  
 → everywhere, in part. Hadron physics

### Task 7.2. Multigap RPCs (MRPCs) for fast timing and Eco-friendly gas mixtures for RPCs

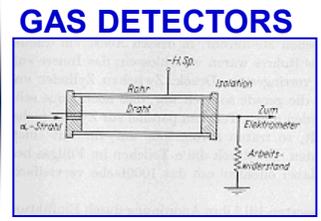

- Developing and testing material (thin plates of low resistivity glass)
- Construction, characterisation and test beam of small-size prototypes
- Construction of 1×1 m<sup>2</sup> prototypes with the new readout plane structure for a semi-digital hadron calorimeter (SDHCAL)
- Test beam study of the shower time development in an SDHCAL, equipped with the prototype detectors
- Identification and characterisation of new gas mixture candidates
- Validation of the gas mixtures after large integrated doses at GIF++

**Eol56 (Piccolo, INFN-LNF)**  
**Study of eco-friendly gas mixtures for Resistive Plate Chamber detectors**

**SINERGIES**  
 RPC with eco-friendly gasses: wherever RPCs are/will be used

**Eol58 (Laktineh, Lyon/CNRS)**  
**Timing for SDHCAL**

**SINERGIES**  
 Semi-digital calorimetry → e+e-

## About MPGDS

**EoI114 (Verwilligen, INFN-BA)**  
 Development of resistive electrodes for MPGD detectors for future collider experiments

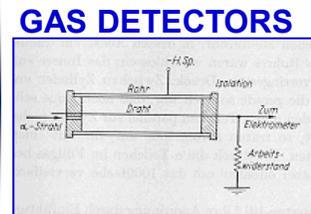

**SINERGIES**  
 Mastering resistive layers in MPGDs  
 → All future MPGD R&D and applications

### Task 7.3. Development of resistive electrodes for MPGDs and Industrial engineering of high-rate $\mu$ -RWELL detector

- Production of Diamond Like Carbon (DLC) with ion beam deposition and pulsed laser deposition
- Study of the resistance of graphene to polyimide etching liquids
- Characterisation of  $10 \times 10 \text{ cm}^2$  foils by DLC and graphene
- Industrial production of small-size prototypes and their characterisation
- Industrial production of large-size prototypes ( $\sim 0.5 \text{ m}^2$ ) and their characterisation

**EoI52 (Cibinetto, INFN-FE)**  
 Industrial engineering of high-rate  $\mu$ -RWELL detectors with bi-dimensional readout

**SINERGIES**  
 TT of large  $\mu$ R-WELL production  
 → LHCb, e+e-

## About large-size gaseous detectors

**Eol17 (Grancagnolo **INFN-LE**)**  
**Cluster Counting/Timing: data reduction and pre-processing of drift chamber signals sampled at high rates**

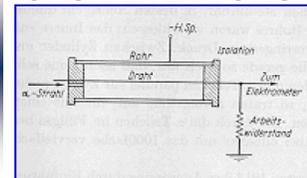

**SINERGIES**  
**Cluster counting in large DCs**  
**→ e+e-**

**Task 7.4. A 4-channel electronic board prototype for cluster counting and Hybrid readout for high pressure gas TPC for neutrino physics**

- Design electronics and realise a 4-channel prototype for cluster counting in ultra-light drift chambers
- Identification and characterisation of adequate gasses
- Construction of a small-scale TPC prototype (~10 l) with a hybrid charge and optical readout

**Eols113 & 122 (Deisting, Royal Holloway, University of London; Lu, Oxford)**  
**High pressure gas time projection with hybrid light and charge readout;**  
**Novel Gas Mixtures in High-Pressure Time Projection Chambers for Accelerator-Based Neutrino Physics Experiments**

**SINERGIES**  
**High pressure TPC for ν cross-section measurements → ν-physics at accelerators**

## MPGD for PID applications

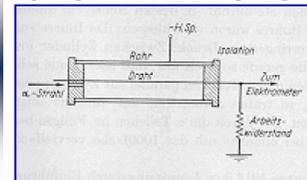

### Task 7.5. Photon detectors for hadron particle identification at high momenta

- Development of MPGD single photon detectors for compact Ring Imaging Cherenkov detectors
- Comparison of measured prototype characteristics with Silicon Photomultipliers (SiPMs) and Large Area Picosecond Photodetectors (LAPPDs)

EoI24 (Dalla Torre, **INFN-TS**)  
Photon detectors for hadron particle identification at high momenta with compact RICHes

#### SINERGIES

Development of the compact RICH concept for h-PID at high momenta → EIC, e+e-, COMPASS

## COMMENTI

- Presenza trasversale e qualificata INFN
- Tutte le industrie sono legate ad attivita' INFN

## Finanziamento

- 349 k€ / 858 k€ to INFN
