ELBA

Equal mix of *geometric properties* (sphericity) of iso-intensity surfaces & *intensity statistics*.

no need for uptake ROIs,
no need for reference!

SUVr-independent evaluation of brain amyloidosis, Chincarini et. al, Journal of Alzheimer's Disease, Vol. 54-4 (2016)

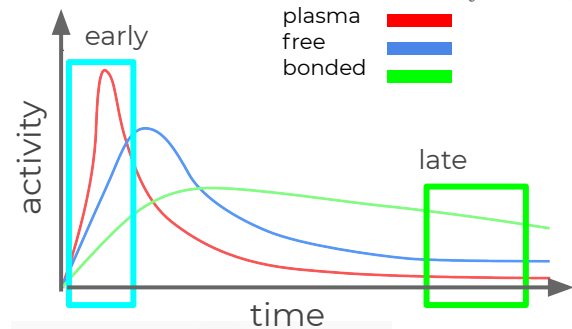

Approaches to semi-quantification: beyond SUVr in amyloid imaging, European Conference on Clinical Neuroimaging, Roma (2016)

Semi-quantification and grading of amyloid PET, Chincarini et. al, Neuroimage Clinical, (2019)

TDr

REQUIREMENT: needs the early scan (0-5' from injection)

$$TDr = \frac{\langle I_{late} \rangle_{Up}}{\langle I_{late} \rangle_{Re}} = \frac{\text{cyan}}{\text{green}}$$

< N | P >

Quantification and ranking in amyloid-PET, R. Gianeri, Master in Physics Thesis, tutor: A. Chincarini (2017)

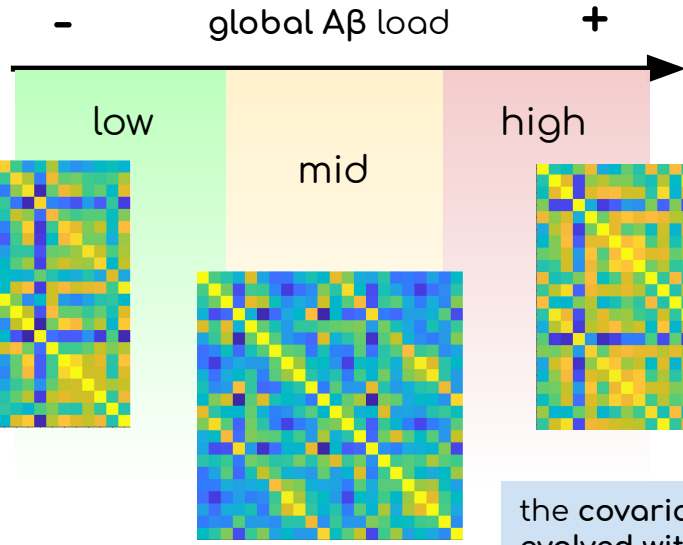

Early scans in amyloid-PET: just pretty images? A. Chincarini et. al, AIMN, Rimini (2017)

A kinetics-based approach to amyloid PET semi-quantification A. Chincarini et. al, EJNMMI, (2020)

Amyloid spreading

results

inter-regional correlation analysis

brain regions show different vulnerability to Aβ deposition
striatal uptake is independent of cortical

2 quantification
(cortico-cerebellar SUVr, ELBA)
mapped to F-pir*

the covariances among brain regions evolved with the global Aβ levels
dynamic is observed not only in healthy elderly

* Chincarini et al. Semi-quantification and grading of amyloid PET: A project of the European Alzheimer's Disease Consortium (EADC). NeuroIm. Clin. 2019

Clinical correlates

results

regression analysis
neuropsychology vs. amyloid

association of semantic verbal fluency to the ratio between cortical and subcortical deposition
subthreshold patients drive the association

Cook's distance
who mostly contributed to each model?

regional Aβ assessment represents an available resource on amy-PET with possibly clinical implications

To **develop** and distribute **reliable AI-driven analyses** to improve **diagnostic impact, reliability** and clinical **confidence**.

Two analysis pipelines currently available:

- DAT SPECT (datscan & striascan)
- amyloid-PET (all 3 fluorinated tracers)

Future efforts to include:

- FDG
- FDOPA
- tau-PET
- T₁-MRI atrophy pattern
- T₂-MRI WM lesions

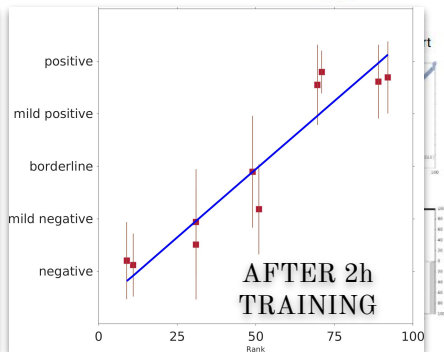

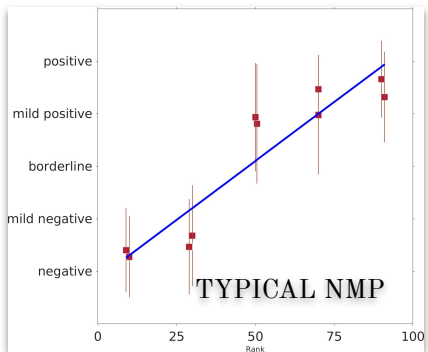

We provide a comprehensive learning environment to approach automatic analysis of amyloid PET in a typical clinical setting

We help to write a more informed diagnosis report

We help reducing the diagnostic error

We provide on-demand continuous medical training on specific pathology

We comply with NM societies requirements
