**CYGNO MEETING - 14/01/21** 

#### 2021 General Plans

- Installation of LIME at LNGS with a proper gas system, DAQ and trigger system, DCS and HV system;
- Finalisation of demonstrator designs, start of material procurements and construction;
- Low radioactivity studies (lens, GEM, sensors);
- Finalisation of simulations and comparison of the performance
- R&D on gases, luminescence, negative ions
- Analyses of all data

#### LIME 1 e 2

- Because of administrative delays, re-work of LIME for new (ad hopefully) better KFC tests is starting only these days;
- In order to have time for extensive tests of resistive foil and copper ring Field Cage, we decided to install KFC on LIME1 and bandellas on LIME2 (built for general studies of gas properties in TPC with Francesco laser system);
- Tests will start as soon as possible to optimise detector for Migdal studies and LNGS installation

#### News from lab

 During holidays we took continuous runs with a 55Fe on LEMON to study the stability of light response

 Good correlation found with a delay of 18 hours

$$\frac{\Delta L}{\Delta T} = 3\% / {^{\circ}C}$$

End of gas

- Studies on currents are on-going
- After the end of gas a set of pedestal runs were taken for several days to study their stability both for ORCA and for FUSION;

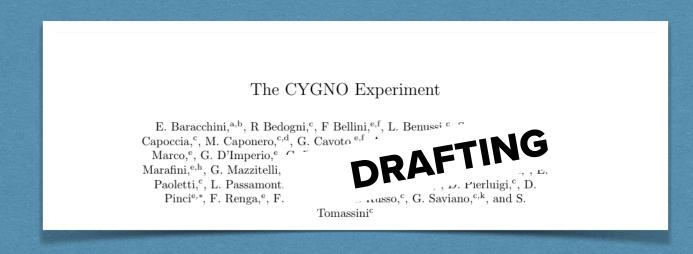

### Papers and Conferences

#### **TIPP 2021**

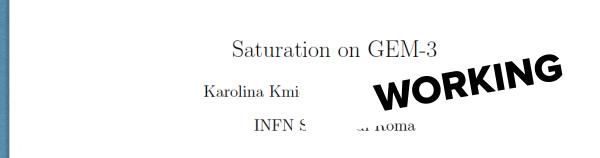

International Conference on Technology and Instrumentation in Particle Physics

Deadline for abstract submission is February 7, 2021

I propose to submit a general paper and focused ones (luminescence, saturation, new gases) - any volunteer?

General paper on CYGNO: first draft by mid Feb

A new analysis is needed to better understand the saturation issue
