## DOUBLE CHOOZ status

*martedì 12 ottobre 2010 17:36 (10 minuti)*

The Double Chooz collaboration is building a neutrino detector along the Belgium France boarder, to chase the  $\theta_{13}$  neutrino mixing angle. The detector filling is beginning, and data taking is expected from next September.

This world bound, from a first experiment at Chooz, should be improved in the beginning of 2011.
