

Heavy Quarks & Leptons

Contribution ID: 82

Type: **oral**

Exes and why Z?

Monday, 11 October 2010 09:45 (25 minutes)

Threshold enhancements, like the X(4660), and depletion effects, like the X(4260), are listed as $c\bar{c}$ resonances. We will discuss those observations and present a list of further $c\bar{c}$ enhancements which are more probable to represent charmonium vector excitations.

We will furthermore discuss the importance of the observed Z resonances, Z(4050), Z(4250) and Z(4430), for the family of charmed mesons.
