Innovation for Data Intensive Storage Solutions

Wednesday, 19 May 2010 12:45 (25 minutes)

Annual data growth rates exceeding 20%? Performance bottlenecks with data processing? Spikes in demand and increasing collaboration needs? Hitachi harnesses the power of its research and innovation across multiple company disciplines including: telecommunications, networking, supercomputers, storage and sustainable manufacturing to drive development of storage solutions to support data intensive storage solutions. With the largest worldwide deployment of virtualisation in storage infrastructures, innovative controller and disk drive manufacture, the integration of hardware accelerated NAS architectures, clustering and data migration functionality there are many solutions available for specialist markets.

Hear how Hitachi Data Systems can offer agile, differentiated solutions to the problems associated with massively scalable, high performance storage infrastructure requirements to support specialist computing applications.

Presenter: HITACHI

Session Classification: Tecnologie avanzate
