

# SENSITIVITY STUDY OF CYGNO

G. Dho, E. Baracchini, S. Piacentini, A. Messina

# BAYESIAN AND FREQUENTIST TALK EACH OTHER

- After several tests it appears the two methods agree each other on the results of the analysis despite following different path

See Stefano's presentation

- This means we can start working on the development of 90% CL

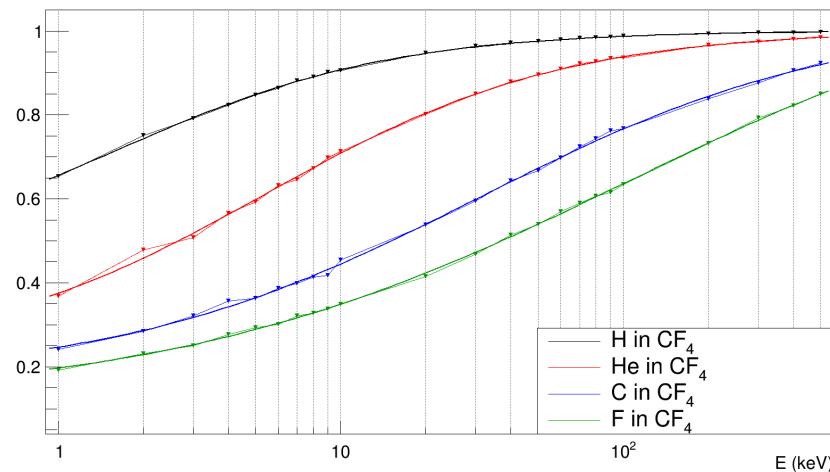

- The parameters taken into consideration are always the same

Angular resolution  
(head-tail and directionality)

Energy threshold

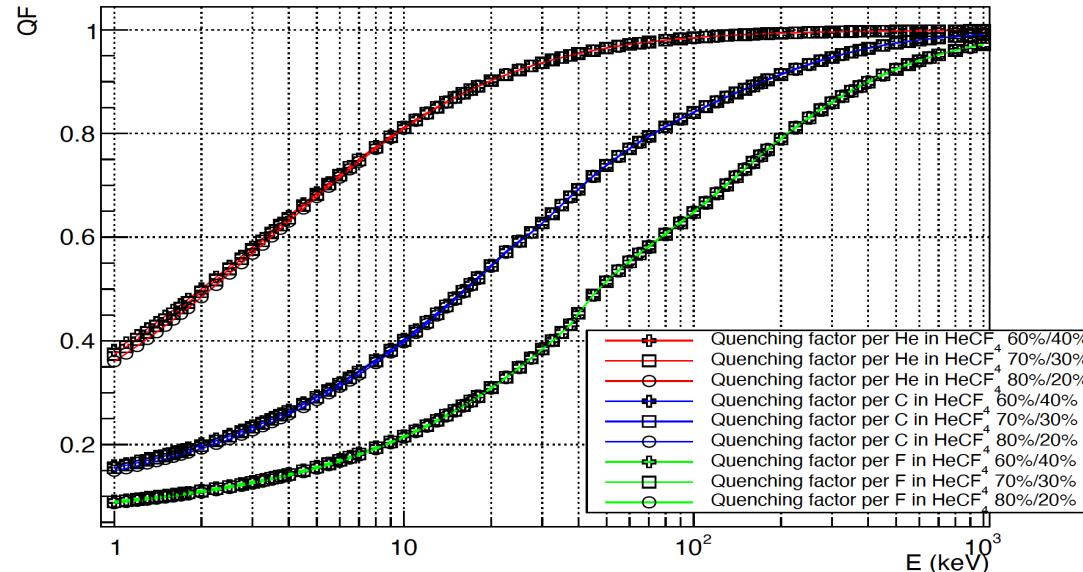

Quenching factor

- New quenching factor calculated by Flaminia<sup>#</sup>

# NEW QUENCHING FACTOR

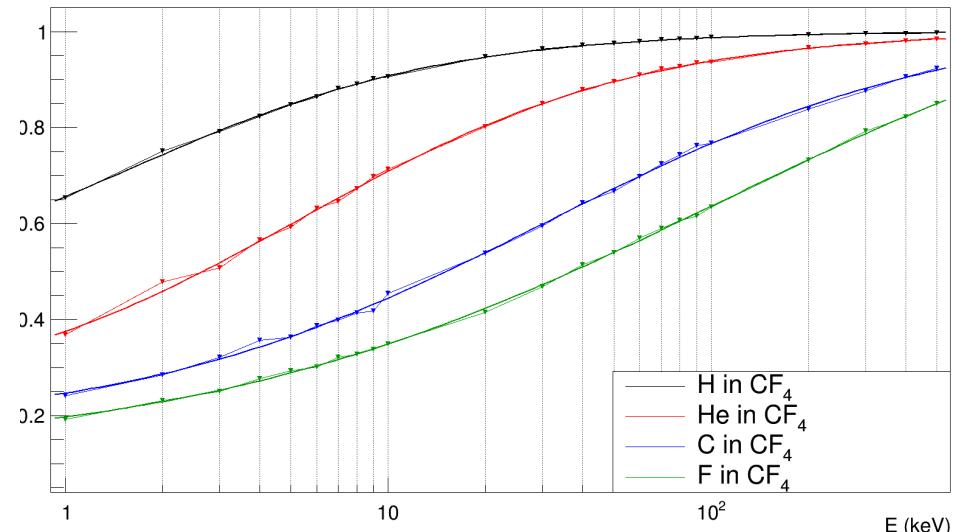

Old

Element threshold on original energy in keV  
(if measurable energy threshold is 1 keV):

He	<b>2,02</b>
C	<b>3,91</b>
F	<b>6,18</b>

New

Element threshold on original energy in keV  
(if measurable energy threshold is 1 keV):

He	<b>2,14</b>
C	<b>3,12</b>
F	<b>3,74</b>

# FIRST NEW POINTS OF CL 90%
