

Polytec TC 423

Properties

Polytec TC 423 is a pasty, two component, highly thermally conductive, electrically insulating epoxy adhesive curing at room temperature.

It has an excellent adhesion to glass, metal, ceramic, FR4 and most plastics.

Polytec TC 423 is used in various thermal management applications, especially for potting of large volumes in electrical and power engineering.

The material can be applied via dispensing or manual application.

Processing

- TC 423 Part A must be thoroughly stirred before mixing!
- For two-component products the components A and B should be mixed carefully within the specified mixing ratio.
- For filled products both components should be homogenized carefully prior mixing, in order to prevent a possible settling of the filler.
- Processing should be carried out rapidly after mixing the components; as an indication the pot life can be used.
- Surfaces should be clean, thus free of dirt, grease, oil, dust or process chemicals.
- One-component products can be applied directly and are not subject to a pot life (except pre-mixed/frozen products).
- Please take notice of respective minimum curing temperature and time.
- For Safety information please refer to the respective Material Safety Data Sheet.

Polytec TC 423

Thermally Conductive Adhesive

Technical Data

Polytec TC 423

| Properties in uncured state | Method | Unit | Technical Data |
|---|----------|-------------------|---------------------|
| Chemical basis | - | - | Epoxy |
| No. of components | - | - | 2 |
| Mixing ratio (weight) | - | - | 100:1.7 |
| Mixing ratio (volume) | - | - | - |
| Pot life at 23°C | TM 702 | min | 30 |
| Storage Stability at 23°C | TM 701 | months | 12 |
| Consistency | TM 101 | - | Tough-flowing paste |
| Density Mix | TM 201.2 | g/cm ³ | 3.0 |
| Density A-Part | TM 201.2 | g/cm ³ | 3.1 |
| Density B-Part | TM 201.2 | g/cm ³ | 1.0 |
| Type of filler | - | - | Aluminum oxide |
| Max. particle size | - | µm | <150 |
| Viscosity Mix 10 s ⁻¹ at 23°C | TM 202.9 | mPa·s | 45 000 |
| Viscosity A-Part 84 s ⁻¹ at 23°C | TM 202.1 | mPa·s | - |
| Viscosity B-Part 84 s ⁻¹ at 23°C | TM 202.1 | mPa·s | - |

| Properties in cured* state | Method | Unit | Technical Data |
|--|-----------------|-------------------|-----------------------|
| Color | TM 101 | - | Blue |
| Hardness (Shore D) | DIN EN ISO 868 | - | >90 |
| Temperature resistance continuous | TM 302 | °C | -55 / +160 |
| Temperature resistance short term | TM 302 | °C | -55 / +260 |
| Degradation Temperature | TM 302 | °C | +310 |
| Glass Transition Temperature (T _g) | TM 501 | °C | 60 - 65 |
| Thermal conductivity (THB method) | TM 502 | W/m·K | 3.0 ±0.5 |
| Thermal conductivity (Laser Flash method) | | W/m·K | 4,2 ±0,9 |
| Specific volume resistivity | DIN EN ISO 3915 | Ω·cm | >1 · 10 ¹⁴ |
| Dielectric strength | - | kV/mm | >12 |
| Young modulus | TM 605 | N/mm ² | 23 000 |
| Tensile strength | TM 605 | N/mm ² | 29 |
| Lap sheer strength (Al/Al) | TM 604 | N/mm ² | 10 |
| Elongation at break | TM 605 | % | 0.1 |
| Water absorption 24 h, 23°C | TM 301 | % | - |

*The above data has been determined with samples cured at 23 °C. Please notice, by varying the curing temperature these properties can be influenced to some extend.

Polytec TC 423

| Curing* | Method | Unit | Technical Data |
|----------------------------|--------|------|----------------|
| Minimum curing temperature | | °C | 15 |
| Curing time at 23°C | | h | 24 |
| Curing time at 100°C | | min | 60 |
| Curing time at 120°C | | min | 30 |
| Curing time at 180°C | | s | - |

*Curing temperatures refer to the temperature in the respective bond line. When choosing the respective curing conditions, the time needed to heat the substrate has to be considered. Depending on the type of heat source (convection oven, hot stamp, heating plate) the heat input may vary.

Please note:

The above listed information are typical data based on tests and are believed to be accurate. Polytec PT makes no warranties (expressed or implied) as to their accuracy. The above listed data do not constitute specifications. The processing (in particular the cure conditions) of the material, the process control and the variety of different applications at various customers are not under Polytec PT's control. Therefore Polytec PT will not be liable for concrete results in any specific application or in any connection with the use of this product. In particular the cure conditions do have a major effect on the properties of the cured material. Therefore it is highly recommended to keep the cure schedule – once established - under tight control. With the release of this data sheet all former data sheets will be null and void.
