News

LIME under test

- The stability test, started on Monday;

- We are periodically taking runs with ^{55}Fe: short and long exposures with corresponding pedestals;

- Water cooling is On;

- About 60 runs/day (0.5 GB-100 events each);

- Gas T/P, Voltages and Currents continuously logged;

- Automatised data conversion and storage on cloud was setup;

- Tomorrow we'll evaluate if setup the PMT (mainly for DAQ and trigger debug);
