Parametric Instability Observation in Advanced Virgo

Monday, 5 July 2021 13:30 (1 minute)

We present the first observation of a parametric instability event in Advanced Virgo. The event occurred on January the 2020 during the locking acquisition procedure and involves for the first time, for a long-arm interferometer, a very high frequency mechanical mode. We will describe this event and the mean adopted for its dampening.

Primary authors: PUPPO, Paola (ROMA1); ALLOCCA, Annalisa (Universita' di Pisa - INFN Pisa); JACQMIN, Thibaut (Laboratoire Kastler Brossel/Sorbonne University); Dr BOGAERT, Gilles (Artemis - Nice - FR); Dr COHEN, David (Paris); ON BEHALF OF VIRGO COLLABORATION

Presenter: PUPPO, Paola (ROMA1)

Session Classification: Recorded Talks: Experimental Challenges in Gravitational Wave Detection
