Liquid Activated Gravity Experiment - an update

Thursday, September 9, 2021 3:30 PM (15 minutes)

Gravity at short distances is still an open field for investigation. The measurement scheme we propose, with fluid source masses, overcomes some of the main limitations of torsion pendulum experiments. We overview the scientific motivations for such a search, outline the experimental apparatus and present a progress report on the activities, with the first experimental demonstration of the working principle.
