# Report LHCB

Stefano Perazzini, Vincenzo Rega

Consiglio di Gestione CNAF – Bologna, 18 Giugno 2021

# Attività di LHCb al CNAF

- Attività LHCb
  - Operazioni dominate da produzione MC e pochi job utente
  - Elevata efficienza
    - Alcune categorie con efficienza più bassa perché dominate da I/O ma tutto nella normalità

Job CPU efficiency by JobType

# Attività di LHCb al CNAF

# Alcuni problemi

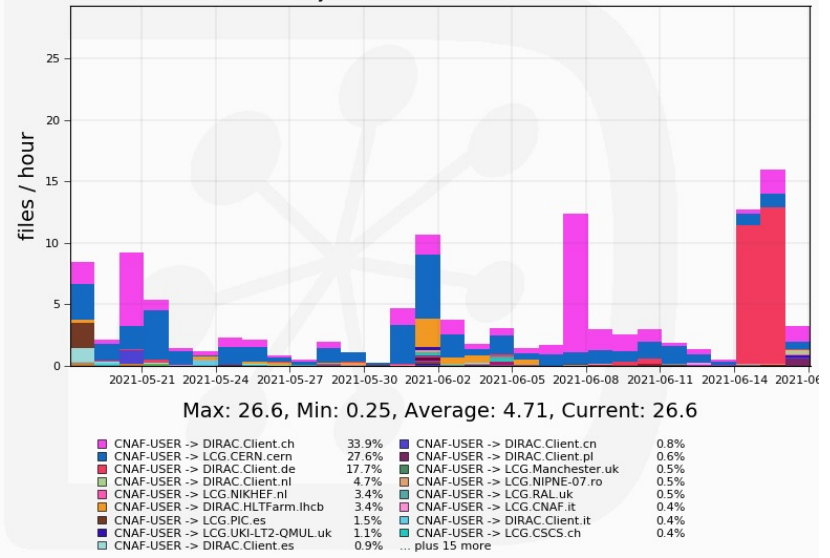

- Negli ultimi giorni diversi fallimenti sui trasferimenti
  - In corso fase di debug

# Risorse 2022

- Nelle prossime slides ho semplicemente preso i numeri dai vari documenti e messi in tabella
- Tutti i numeri devono **ancora essere discussi con i referees** quindi non sono “scritti sulla pietra”
- Lo share INFN e **all'incirca il 19%** (~25% per il tape) ma con variazioni di qualche percento ogni anno
  - Variazioni del **20% relativo** sono possibili
  - Considerate questi numeri **molto preliminari**

## CERN-RRB-2021-023

**Risorse da suddividere  
per lo share della nazione**

# Risorse 2022

INFN T1	2021 Pledge (From REBUS T1+T2)	2022 ( $\Delta$ 2021)
CPU (HS06)	152149	182160 (+30011)
Disk (TB)	7633	11887 (+4254)
Tape (TB)	13362	26183 (+12821)

Assunto 19%  
invece del 25%

**Numeri presi da REBUS, da aggiornare a seguito di  
aggiunta di nuove risorse CINECA e sblocco finanziamenti 2021 SJ**

## CERN-RRB-2021-023

It is worth noting that the large rise in data-taking rate will need to be matched by a corresponding increase in the tape archival performance. Given the LHC scenario for 2022, where stable beams are expected 50% of the time, an average global throughput to tape of at least 5.5 GB/s will be required both at T0 and aggregated at the T1 centres. Similarly, the end-of-year data reprocessing will require adequate data recall rates from tape (estimated by LHCb to be 4.24 GB/s both at CERN and at the T1 ensemble) in order to complete a full pass of the data during the shutdown duration.

**Circa il 25% di questo throughput su tape va al CNAF**
