

TimeSPOT WP4: Stato delle attività a Milano

Marco Petruzzo

15 Aprile 2021

- Received “**MyVelo**” code from Serena
- **52 layers:**
 - 26 “left” L-shaped modules + 26 “right” L-shaped modules
 - **Left and right** modules treated **independently** (in the pattern recognition and tracking)
- **Stub search** being implemented.
Two stages, on **event-by-event** basis:
 - Search of stubs as **couples of linked hits**
 - Search of **tracks as “clusters” of stubs** with similar parameters
- Stub search is performed on **limited regions** of the Velo layers:
 - “**Training**” to be implemented-ported
 - Training performed on a collection of “**true**” and “**reconstructible**” tracks
