03 MARZO 2021

NUOVO STUDIO SUL MECCANISMO DI GENERAZIONE DEL MOMENTO ANGOLARE NELLA FISSIONE NUCLEARE

Un team di ricerca dell'INFN, della collaborazione scientifica GAMMA, ha pubblicato sulla rivista *Nature* uno studio che contribuisce a far luce su uno dei misteri della fisica nucleare: il meccanismo di formazione del momento angolare dei due frammenti che si generano nel processo di fissione nucleare. Il risultato è stato ottenuto misurando la radiazione gamma emessa dalla fissione di Urano e Torio.

In una serie di esperimenti condotti presso l'acceleratore ALTO, al laboratorio Irène-Joliot-Curie di Orsay (Francia), i ricercatori hanno osservato che i frammenti consequenti al processo di fissione acquistano momento angolare dopo la fissione e non prima, come ipotizzato dalla maggior parte delle teorie. Il risultato è stato ottenuto dalla collaborazione internazionale di fisica nucleare NU-BALL, che si occupa di studiare una ampia gamma di nuclei e di investigare la loro struttura mediante l'impiego di un spettrometro gamma ad alta granularità, composto da più di 100 rivelatori al germanio iperpuro, appartenenti al network europeo

GAMMAPOL

La collaborazione NU-BALL include ricercatori da 37 istituzioni e 16 paesi, tra cui fisici nucleari dell'Università e della sezione INFN di Milano, e dei Laboratori Nazionali di Legnaro, che hanno contribuito alla messa a punto dei rivelatori gamma, all'analisi dati e alla interpretazione teorica dei risultati.

Per approfondire leggi la notizia sul sito della sezione INFN di Milano

array at LNL horse for  
SPES exotic beams for science

# Highlights and flagship for GAMMA-Milano: GALILEO, resident $\gamma$ array @ LNL

Sez. Milano contributed to mechanics (2014-2019):

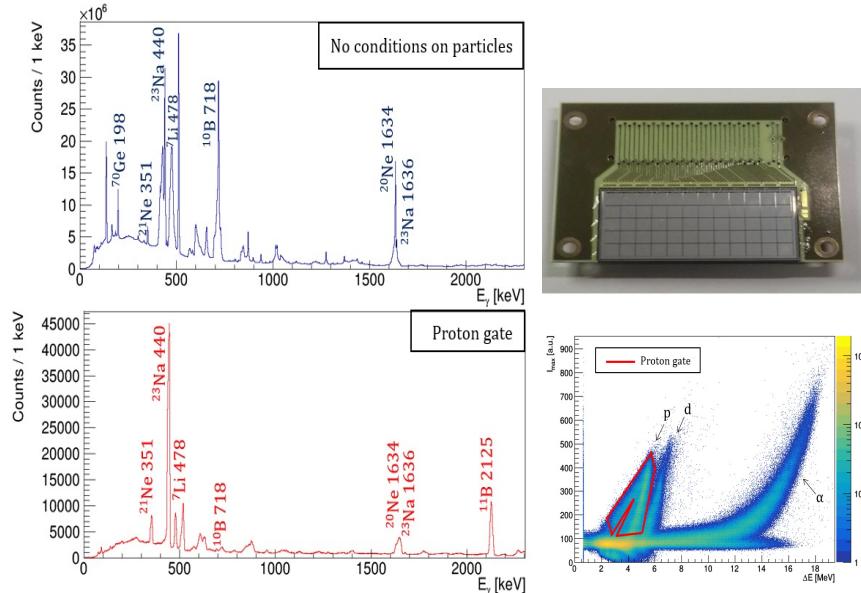

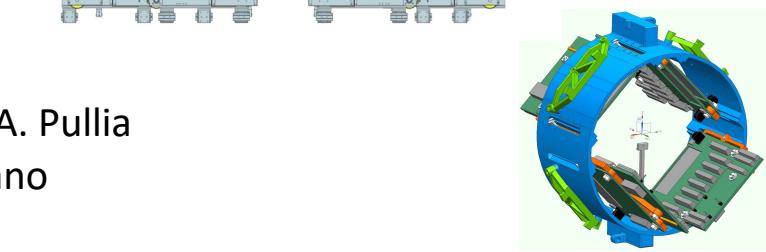

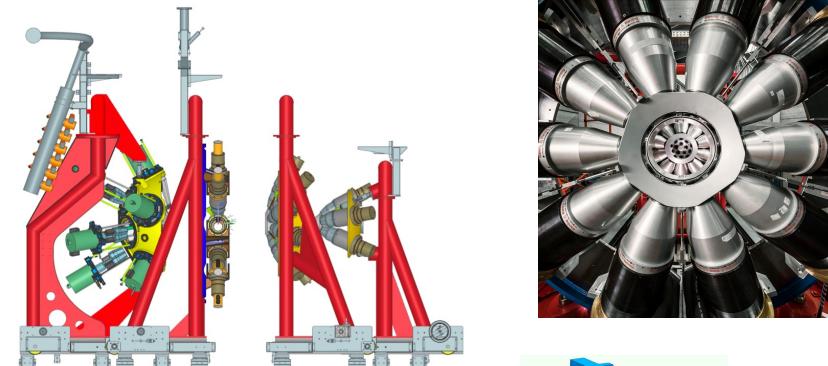

- Scattering chamber
- remote handling target system
- Holding structure for ancillary detectors

Electronics:

- Pre-amplifiers by A.Pulla
- Integrated ASIC preamplifiers for **GAL-TRACE** by S. Capra, A. Pullia
- ➔ future development for AGATA with S.Brambilla and C.Boiano

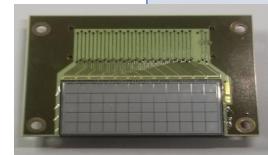

## $^6\text{Li}(^6\text{Li},\text{p})^{11}\text{B}$ (S. Ziliani et al., Milano)

- $\gamma$ -decay from near-threshold resonance in light p-shell
- **GAL-TRACE** to detect the proton at forward angles  
(preparatory exp. for **AGATA with stable beams**)
- Performed in Feb. 2021
- Large Remote participation

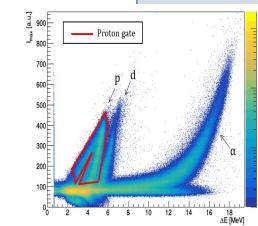

## GAL-TRACE:

Part of a larger state-of-the-art light charged particle detector array based on Si telescopes with digital readout  
 - E-DE and PSA techniques

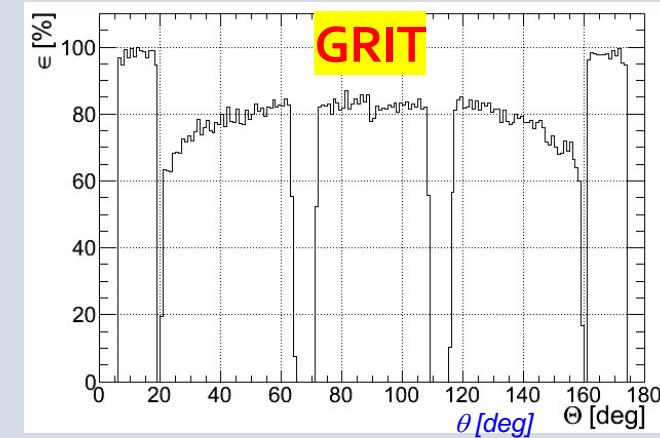

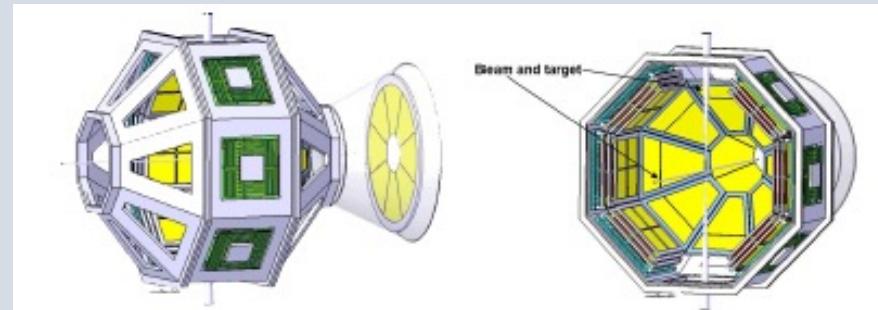

Development of pre-amplifiers by  
 C.Boiano, S.Capra, A.Pullia, S.Brambilla

Management Board : M.Assié(IPNO), D.Beaumel (IPNO),  
 D.Mengoni (INFN, Padova), **A.Pullia (INFN Milano)**

Steering Committee : Y.Blumenfeld (IPNO), G.de France  
 (GANIL), W.Catford (Univ. of Surrey), G.De Angelis (LNL),  
**S.Leoni (INFN, Milano, Italy)**, A. Shrivastava (BARC, India)

## GRIT

*State-of-the-art light particle detection setup*

D. Mengoni et al., TDR June 2018

*LOIs @ GANIL SPIRAL1, LISE and SPES*

**GRIT MOU (2020-2024) Signed INFN: 74 kE/y**

# Highlights and flagship for GAMMA-Milano: PARIS and high-energy detectors

## Steering Committee

- Marek Lewitowicz (Chair)
- Member: Angela Bracco

## Management Board

- Adam Maj (Chair)
- Member: Sergio Brambilla (electronic working group)

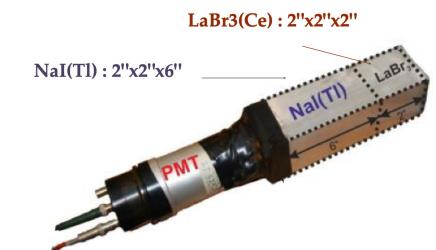

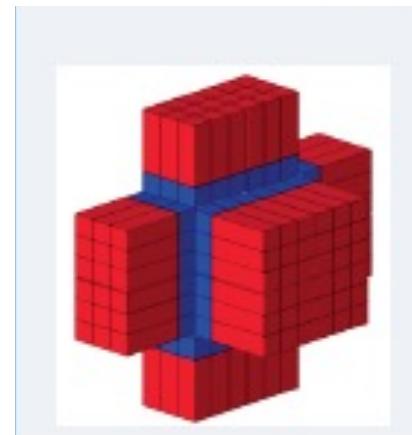

## Collaboration Council

- Chair: Franco Camera

## **'PARIS White-Book' completed in 2021**

<https://rifi.ifj.edu.pl/handle/item/333?locale-attribute=en>

- Introduction (PARIS performances)
- PARIS at GANIL, IJC, LNL, TIFR, GSI, JINR
- The path towards a minicube
- edited by F. Camera, Adam Maj et al.

**MOU is expired in 2020,  
New MOU (or amendement)  
in preparation (ready by end  
2021)**

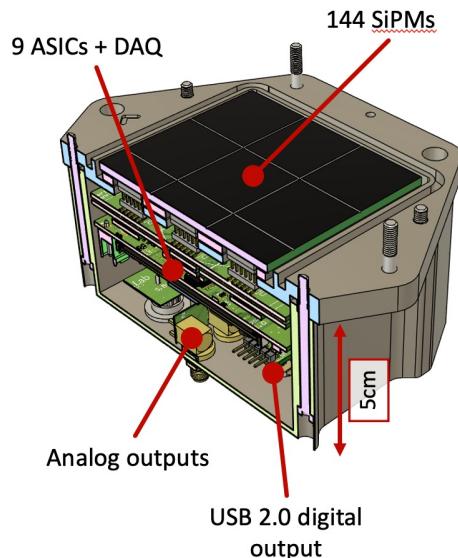

**In 2022: GANIL Campaign (first half 2022)  
IJC (ALTO) Campaign (second half 2022)**

collaborazione con

Carlo Fiorini (POLIMI)  
 Franco Camera (UNIMI/INFN-MI)

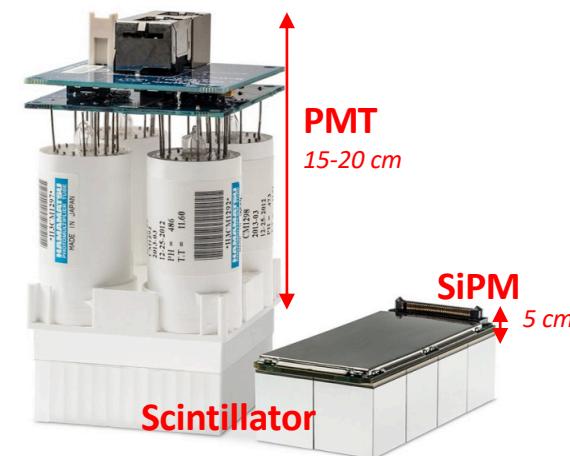

## Development of SiPMs-based readout for large $\text{LaBr}_3$ scintillators

Full-scale range of 40 MeV (lowest ASIC gain)  
 < 3% resolution at 662 keV (highest ASIC gain)  
 state-of-the-art: similar performance of PMT

4 PREMI internazionali  
 interesse da altre collaborazioni

- 9x16-ch GAMMA ASICS for a total of 144 readout channels
- Each SiPM is read by an ASIC channel (no merging)
- FPGA-based data processing and acquisition system
- Temperature gain drift compensation
- USB 2.0 communication for both control and data transfer
- Analog outputs (trigger, signal amplitude, interaction position)

Sez. Milano contributes to realisation of detectors' and SiPMs' cases → new elements to be produced

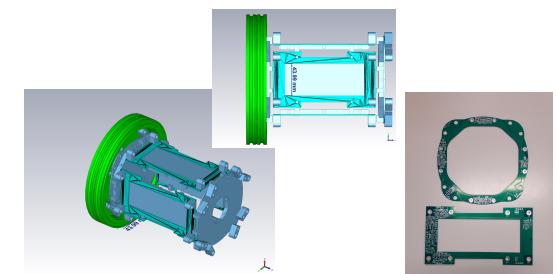

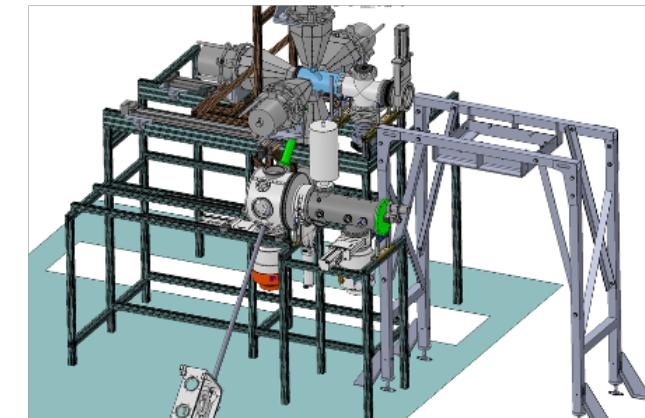

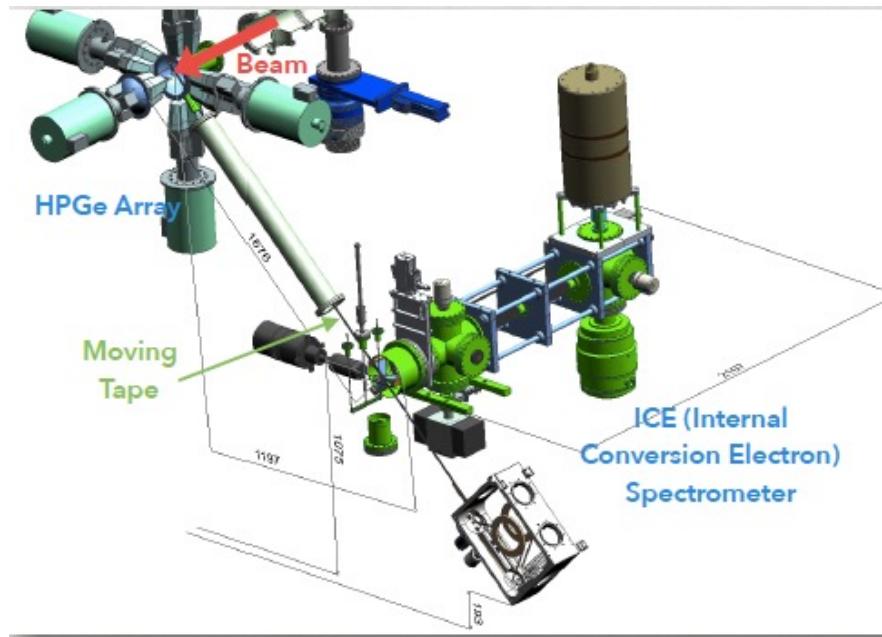

# Highlights and flagship for GAMMA-Milano: BETA TAPE DECAY STATION ed ELECTRON CONVERSION SETUP (@SPES-1+)

## Punto Misura

### Gamma e beta

(1) Struttura di sostegno progettata ordini a breve

(2) Rivelatori da Installare:  
Plastici e HPGe

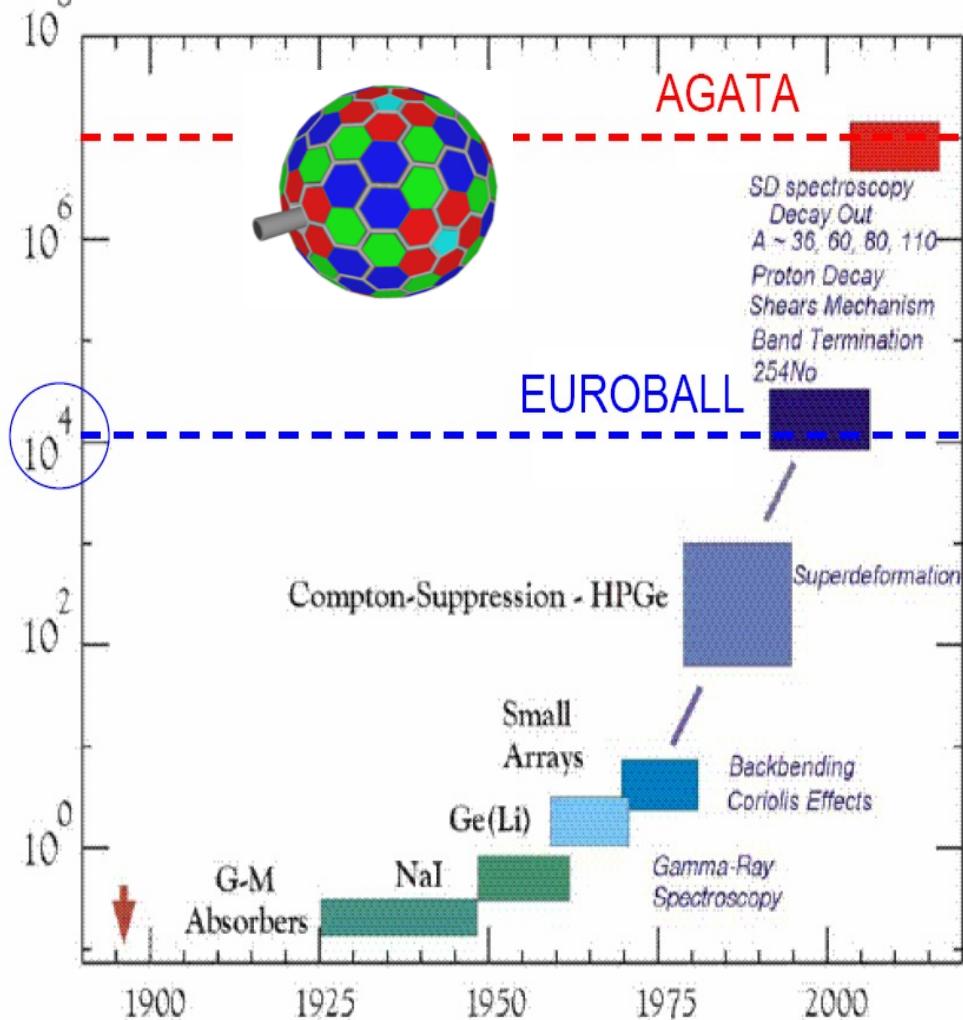

Sez. Milano contributed to mechanics (2018) for the tape cassette  
Holding structure designed at INFN-Fi  
Electronics and Read-out:

- PCB boards for SiPM readout of Plastic by C.Boiano
- Implementation of signals from HPGe and Plastics into digital DAQ system S.Brambilla
- Help to produce small mechanical holding elements foreseen

**PRIMI FASCI SPES@LNL  
2023**

# Highlights and flagship for GAMMA-Milano: AGATA, g-ray tracking array

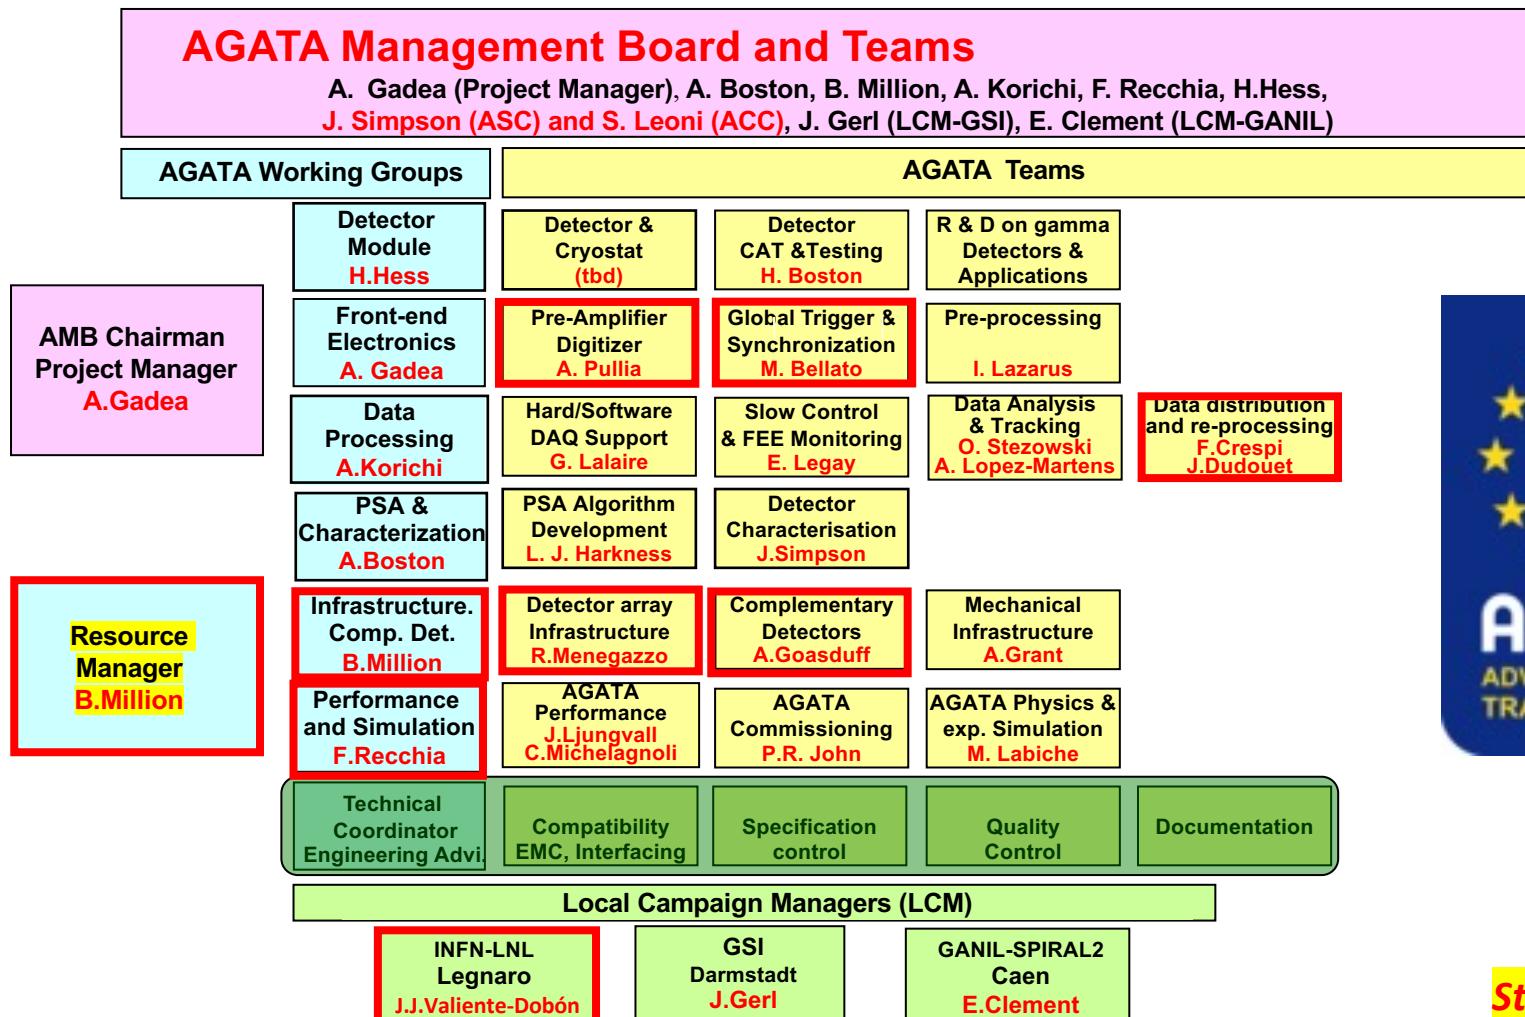

**Increase in sensitivity for gamma-arrays over the years**

## AGATA the “Ultimate” Ge Array

- ❖ **EFFICIENCY:**  
43%  $M_\gamma = 1$  and 28%  $M\gamma = 30$  (@ 1 MeV, FULL BALL)
- ❖ **COUNT RATE** capabilities (100s KHz)
- ❖ **ANGULAR RESOLUTION**  
of the  $\gamma$  interaction point ( $\theta \sim 1^\circ$ )
- ❖ **“PERFECT” DOPPLER CORRECTION**  
(6 keV @ 1 MeV,  $\beta=50\%$ )

**AGATA Steering Committee** Italian Members: A. Bracco, G. De Angelis → A. Bracco next CHAIR (April 22)  
**AGATA Collaboration Council** Italian Members: S. Leoni (CHAIR), S. Lenzi, B. Million, A. Nannini, D. Napoli

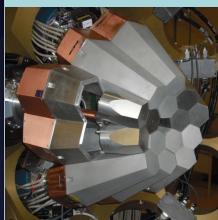

**Status June 2021**

AGATA MoU towards 3π configuration submitted to INFN to be signed

# The AGATA Evolution Towards $2\pi$

LNL  
2009

9 crystals  
Eff. ~3.5%

## WG AGATA@LNL

General WG meetings:

- First 24/9/2020
- Second 28/1/2021
- Third 8/6/2021

Task 1, Infrastructure: Roberto Menegazzo

Task 2, AGATA Mechanics: Nicola Bez, Loris Ramina, Mirco Rampazzo, Marco Scarciati

**Task 3, Experimentation mechanics: Giovanna Benzoni**

Task 4, Safety and Quality: Maria Luisa Allegrini, Daniela Benini, Luca de Paolis

Task 5, Computing and network infrastructures: Michele Gulmini, Massimo D'Alessandro

Task 6, Surveyor: Daniele Scarpa

Task 7, Detectors: Walter Raniero, Davide Rosso

Task 8, DAQ-Electronics: Alain Goasdouf, Nicola Tassan-Got

Task 9, Complementary instrumentation: Danilo Gatti, Giacomo Sartori

**Task 10, Performance: Fabio Crespi**

**Task 11, Exploitation: Andrea Gozzelino**

Task 12, Data Analysis: Fabrizio Palma

Task 13, Logistics: Vincenzo Volpe

Task 14, Documentation: Vincenzo Volpe

Task 15, Project Management: Andrea Gozzelino

### Complementary detectors

- PRISMA : L. Corradi, F. Galtarossa
- GAL-TRACE : S. Capra, G. Zhang
- EUCLIDES: J. Pellumaj, D. Brugnara
- SPIDER: M. Rocchini, M. Balogh
- DANTE: K. Rezynkina
- Gamma-ray scintillators: E. Gamba, S. Pigliapoco
- Plunger: I. Zanon

**INFN ADR position opening in Milano ("Installazione e Campagna Sperimentale con lo spettrometro AGATA@LNL" (deadline 12/07)**

AGATA at LNL: Working Together Guidelines. Version 0.4 2019

 AGATA Management Board

Guidelines for Working Together during the Installation and Deployment of AGATA at LNL.

Work Document

Legnaro National Laboratory

# Highlights and flagship for GAMMA-Milano: AGATA, $\gamma$ -ray tracking array

Scattering chamber made of two shells  
Outer radius 170 mm  
Thickness 2 mm

3 removable shells help covering  
angles btw  $\sim 7$ -88 deg  
Each shell can slide  $\pm 13$  deg from  
central position

Sept 2020- June 2021: designing of scattering  
chamber+ service chamber + holding structure and  
aligning mechanisms

INFN-MI design office:  
S.Coelli, F. Tomasi, E. Viscione, A. Capsoni, D. Vigano'

**progettazione conclusa, concluso affidamento a ditte**  
(camere da vuoto+ coperture+ telaio + movimentazione)

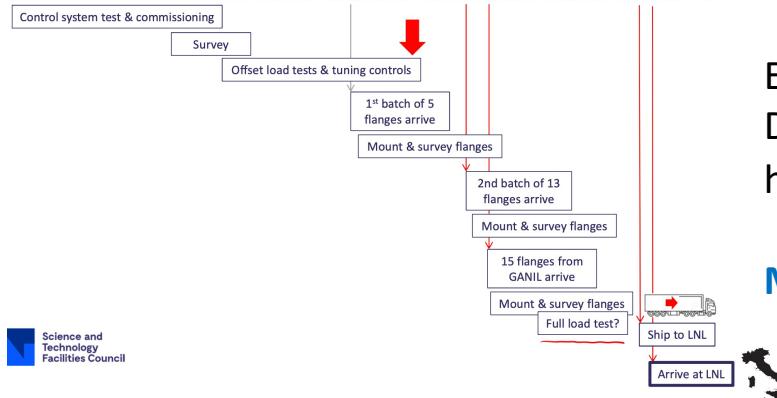

# Highlights and flagship for GAMMA-Milano: AGATA, g-ray tracking array

**Ground breaking 10/3/2021**

Qtr 1, 2021      Qtr 2, 2021      Qtr 3, 2021      Qtr 4, 2021

Jan      Feb      Mar      Apr      May      Jun      Jul      Aug      Sep      Oct      Nov

Expected delivery at LNL:  
 Detectors → end of July  
 holding structure of detectors → Early October

**Mounting of scattering chamber and its holding structure in September**

2021

shutdown x SPES

09-10/2021:  
**AGATA detector installation**

11-2021/03-2022:

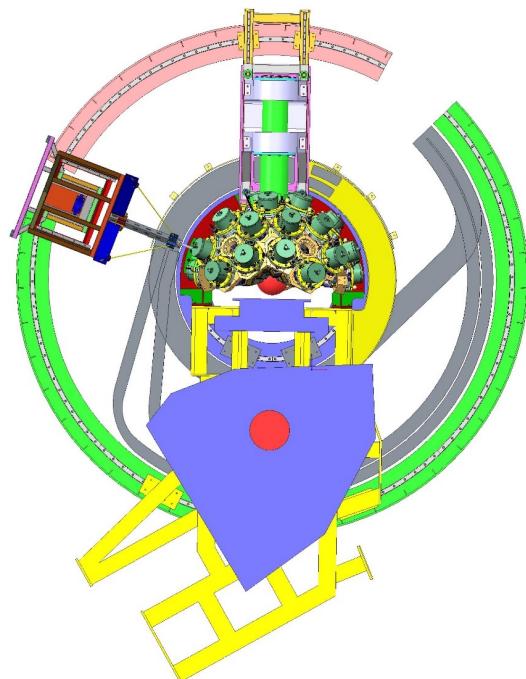

**Acceptance runs + performances**

2022

04/2022: AGATA with STABLE BEAMS !

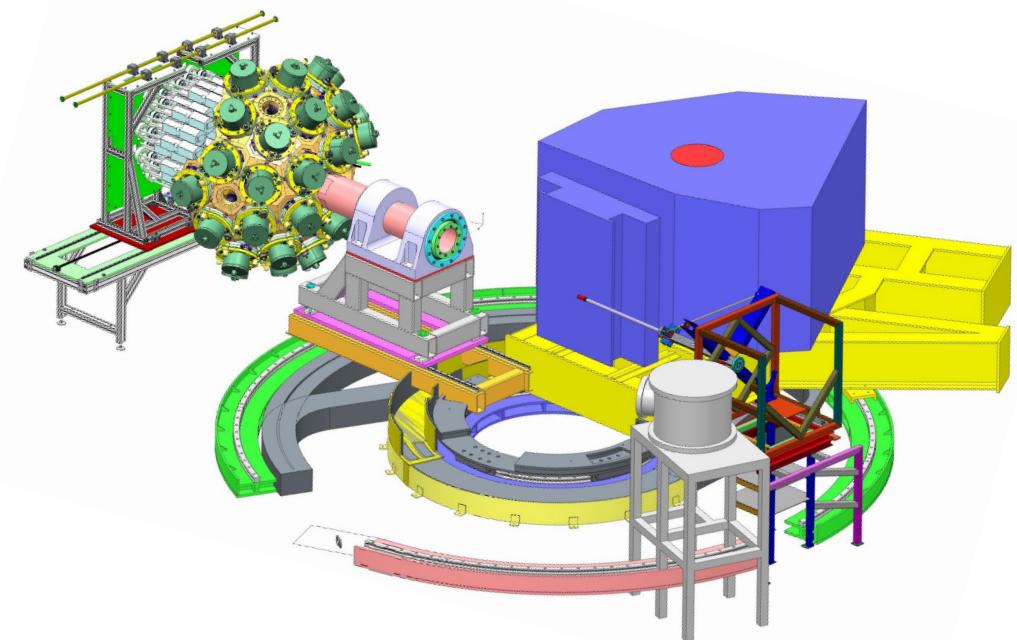

# Two Configurations

I° Setup 2022-2023

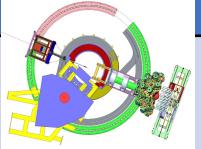

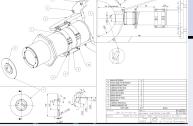

*Coupling with PRISMA*

II° Setup 2023-2024

*Configuration at 0°*

Richieste per officina meccanica e ufficio progettazione	Ore progettazione	Ore officina
<p><b>AGATA:</b> Nuova camera di scattering + beam dump + struttura portante per configurazione stand-alone (2023-2024)</p> <p>Design simile a GALILEO, con possibilita' di adattare targets criogenico</p>		12 mesi/uomo 6 mesi/uomo
Adattatori per installazione rivelatori LaBr3(Ce) 3x3 inch su <b>AGATA</b>		
<b>B-DS:</b> Struttura di sostegno dei rivelatori plastici nella camera di decadimento; aiuto per costruire piccole parti: Aste e Adattatori (piccole L)		1 mese/uomo
Housing per rivelatori		
modifica e produzione seriale di housing per Labr3 3x3 inch con lettura da SiPm (Camera – Fiorini Politecnico) Totale di 4 moduli in due anni (2021-2022)		2 mesi/uomo
Modifica housing per lettura usando I Spector: alto circa 30-35 cm ed ha un diametro di circa 10-20 cm. cilindri di Al-Cu (Camera) Quantita': 1 o 2 pezzi	 	1 mese/uomo 1 mese/uomo
Housing per rivelatori piccoli 1x1 inch (pending request dal 2021) (Camera) 1-2 pezzi		1 mese/uomo
TOTALE	13	11

## Richieste per Servizio di Elettronica: 12 mesi/uomo, Ciro Boiano 100%

- continuazione dello sviluppo di read-out con SiPM dei rivelatori di PARIS
- sviluppo di preamplificatori e supporto alla sperimentazione di TRACE array di Silici
- supporto alla sperimentazione con AGATA, GALILEO e rivelatori ancillary
- supporto per readout con SiPM per scintillatori beta decay Tape Station
- supporto sperimentazione CRACOVIA e ILL

# Mid-term plan of the nuclear physics research at INFN national labs

Preliminary poster

- \* 3 WS collegati per fisica 2022-2027 ai laboratory nazionali
  - LNL e LNS a breve distanza in febbraio/marzo 2022
  - una per LNF e LNGS maggio/giugno 2022

- \* Per LNL e LNS si prevedono 4 gruppi di lavoro:

- # Struttura nucleare
- # Dinamica di reazione
- # Astrofisica nucleare
- # Applicazioni (più vicine alla fisica CSN3)

- \* Outcome: pubblicazione di un lavoro di rivista/libro bianco che firmato dai membri dello steering committee, da tutti gli speaker, dai conveners e dai ricercatori partecipanti ai sottogruppi **EPJ Focus Point**

Steering committee:

LNL: F. Gramegna, E. Fioretto, G. Benzoni, F. Soramel, L. Fortunato, J. J. Valiente-Dobon

LNS: S. Gammino, S. Romano, I. Lombardo, P. Russotto, M. Colonna, M. La Cognata

R. Nania, D. Bettoni, F. Bossi, E. Previtali + colleghi da LNF e LNGS
