LSPE in a nutshell

- The **Large-Scale Polarization Explorer** is:
 - an experiment to measure the polarization of the **CMB** at large angular scales
 - Frequency coverage: 40 – 250 GHz (5 channels, 2 instruments: **STRIP** & **SWIPE**)
 - **SWIPE**: a spinning stratospheric balloon payload at high frequency to avoid atmospheric noise flying long-duration, in the polar night. Equipped with a polarisation modulator to achieve high stability
 - **STRIP**: Using a ground based complementary instrument at low frequency, located at high altitude in Tenerife
 - Current collaboration: Italy + UK (Cardiff, Manchester and Oxford)
- Angular resolution: 1.3 degree FWHM. Sky coverage: ~30% of the sky
- Combined polarization sensitivity: $<10 \mu\text{K}$ arcmin per flight
- Targets:
 - CMB **B-Mode** reionization and recombination bumps
 - Cosmic **variance limited reionization optical depth** measure

PI ASI **SWIPE** (balloon borne) Paolo de Bernardis (Università La Sapienza, Roma, Italy)

PI ASI **STRIP** (ground based) M. Bersanelli (Università di Milano Statale)

Sigla INFN: GE (Gatti), FE (Pagano), MI (Caccianiga) PI (Signorelli), RM1 (de Bernardis), RM2 (Rocchi)

Activity in Ferrara (2020/2021)

Mainly focussed on: White Paper with updated performance

status: final iteration refs, minor

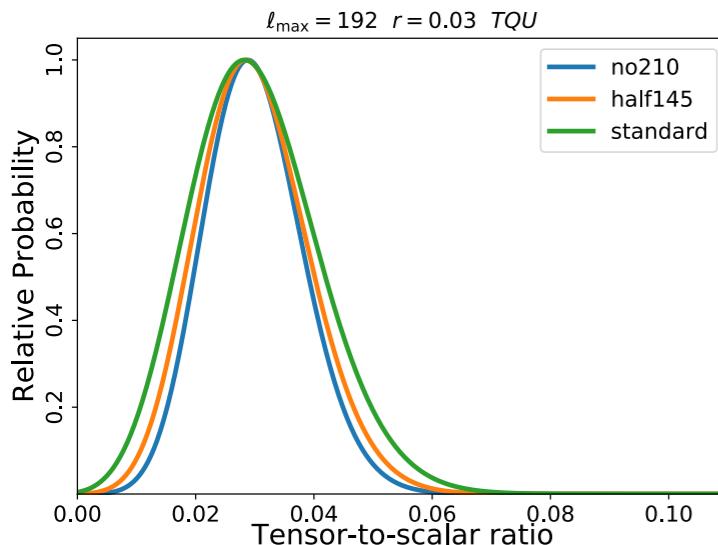

comments

The Large Scale Polarization Explorer (LSPE) for CMB measurements: performance forecast

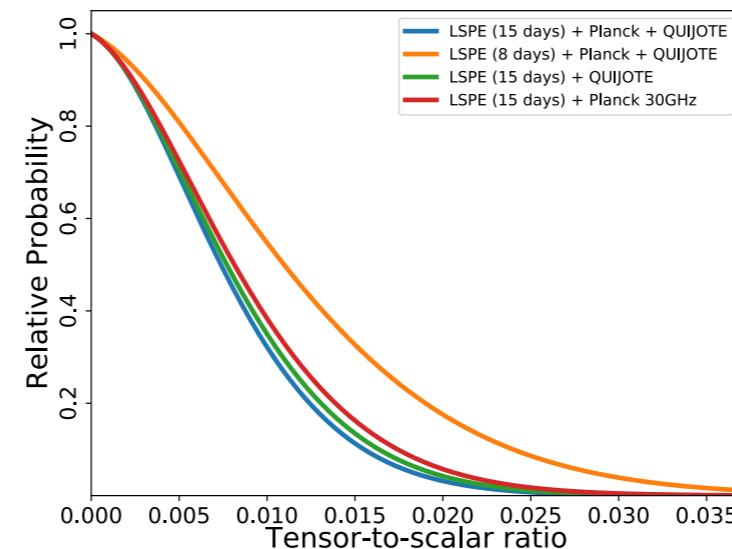

Several contributions:

Focal Plane optimization:

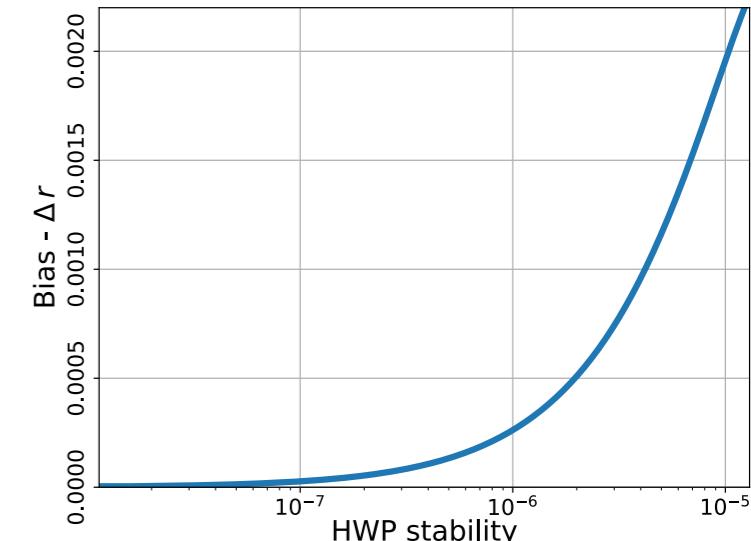

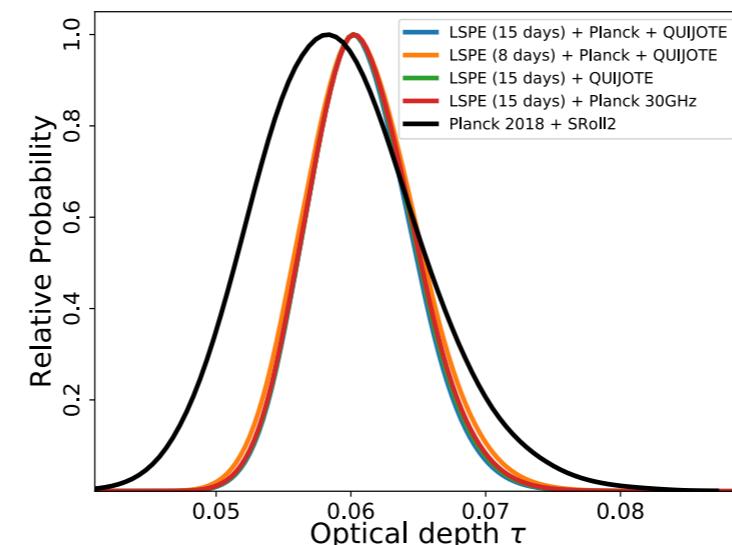

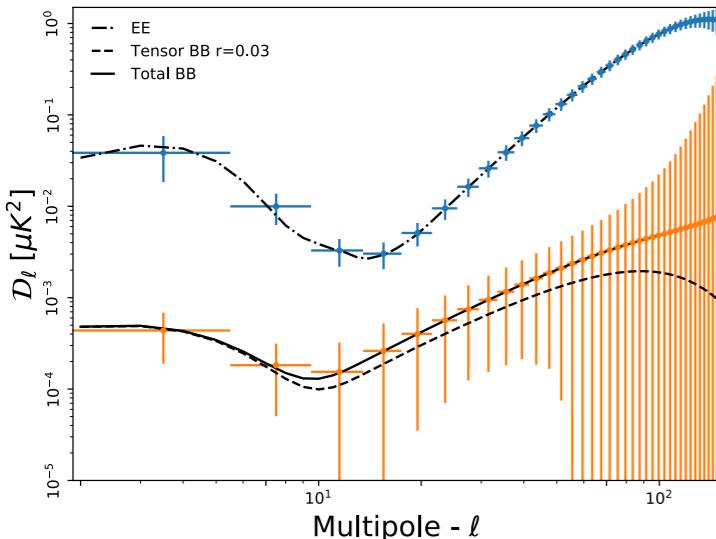

Performance forecast:

Impact of systematic effects:

Foreground cleaning and spectra est.:

Activity in Ferrara (.../2020/2021/2022/...)

Suite of codes under development within the INFN gitlab:

https://baltig.infn.it/cosmology_ferrara/lspe

- Flight Simulator
- Component separation
- Spectrum estimation
- Likelihood
- Cosmological Parameters

The screenshot shows the INFN GitLab interface. The left sidebar has a navigation menu with items like 'Projects', 'Groups', 'Activity', 'Milestones', 'Snippets', and 'Settings'. The main content area displays the 'LSPE' project details. At the top, it shows 'cosmology_ferrara > LSPE > Details'. Below that is a summary card for the 'LSPE' project, which includes a lock icon, 'Project ID: 1557', and statistics: '32 Commits', '1 Branch', '0 Tags', and '447.1 MB Files'. A dropdown menu shows 'master' selected. Below the summary are several buttons: 'Add license', 'Add README', 'Add CHANGELOG', 'Add CONTRIBUTING', 'Add Kubernetes cluster', and 'Set up CI/CD'. A recent commit message from 'Luca Pagano' is shown: 'solved a bug in the simulator and in the par estimation' (authored 4 weeks ago). At the bottom, there is a table listing project components with their last commit and update times.

Name	Last commit	Last update
CAMB	new fiducial added	4 months ago
ancillary	likepixel_mpi_covdiag_2par_QU added	1 month ago
lspc_simulator	solved a bug in the simulator and in the par estimation	4 weeks ago
parameter_estimation	solved a bug in the simulator and in the par estimation	4 weeks ago
tools	driver of new grid added	7 months ago

Activity in Ferrara (2021/2022)

1. Preparation of the SWIPE pipeline:

- a. Data management definition (Instrument model and database)
- b. Simulation and low-level data analysis pipeline development (partially shared with LiteBIRD)
- c. Realistic systematic effects injection (cosmic rays, ...)
- d. Map-making (a specific code for SWIPE is necessary here)

2. High-level analysis pipeline preparation (substantially ready, some optimization necessary):

- a. Component separation (shared with TS)
- b. Likelihood
- c. Parameter estimation

Main collaborations with:

- Roma1, for instrument model and data handling
- Milano, Roma1 for optimization of observational strategy
- SISSA, for foreground cleaning
