

Attività 2021 Richieste 2022

ALICE-HMPID (High Momentum Particle Identification) detector;

A. Franco, G. Volpe e GdC

OUTLINE

Presentazione progetti:

- HMPID e richieste finanziarie 2022
- ALICE-LHC Interface;
- ALICE UI

ALICE-HMPID

Contributing institutes :

- 80% INFN Bari (GdC PL and G. Volpe deputy PL)
- 20% CERN team

Participating institutes with in-kind contributions:

- Centro de Aplicaciones Tecnológicas y Desarrollo Nuclear (CEADEN), Lavana, Cuba
- Wigner Inst. Budapest, Hungary.
- Dep. of Physics and CIT dept. of the University of Malta, Msida, Malta ;

7 RICH (Ring Imaging Cherenkov) modules

~1.3 x1.3 m² for a total CsI active area of ~11 m²

- (@ 3 σ) π /k identification in 1-3 GeV/c and protons in 1.5-5 GeV/c momentum intervals;
- $|\eta| < 0.5$

HMPID in O2

Simulazione e ricostruzione su O²

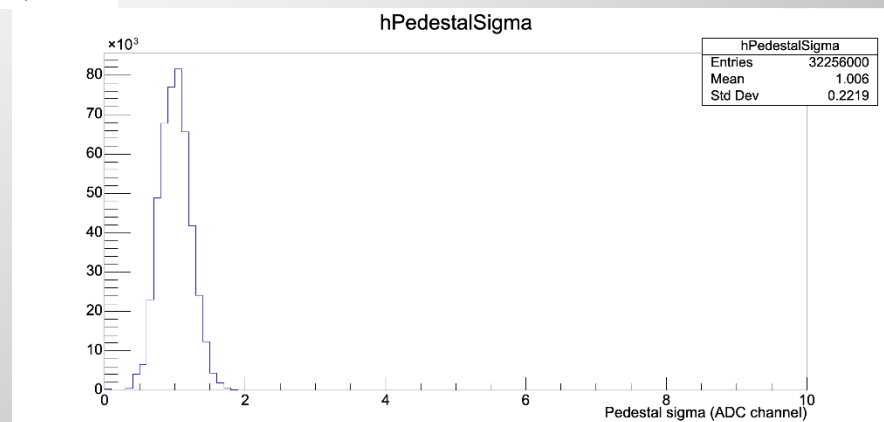

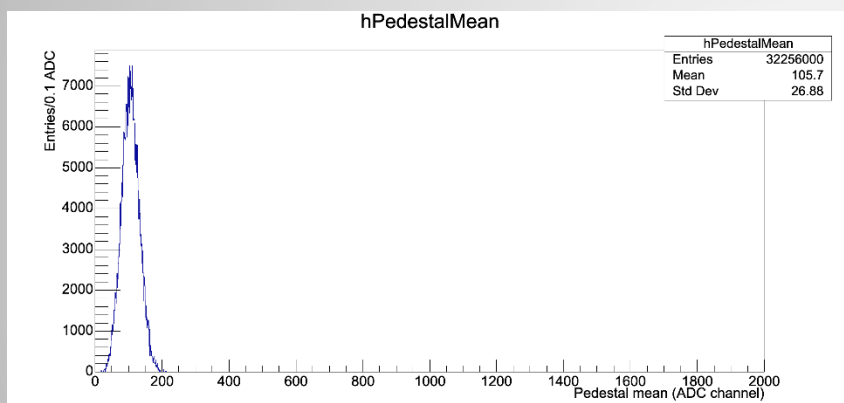

- Geometria del detector e creazione hits implementati, eseguito commit nel repository ufficiale di O²
- Creazione digits da hits implementata
 - Creazione di digits da raw data implementata, eseguito commit nel repository ufficiale in O²
 - Creazione di raw data da digits implementata, eseguito commit nel repository ufficiale in O²
- Creazione cluster da digits:
 - Classi scheletro pronte, da completare - > lavori in corso

Calibrazione

- La procedura di calibrazione per l'HMPID in RUN3 sarà simile a quella utilizzata in RUN1 e RUN2
 - Media e sigma del piedistallo da calcolare in RUN dedicati (PEDESTAL RUN) → caricati nell'elettronica di RO e memorizzati nel CCDB
 - Guadagno di gas e indice di rifrazione media utilizzando le informazioni dal DCS (pressione e temperatura del gas MWPC, trasparenza del freon)
 - Il relativo codice in fase di implementazione

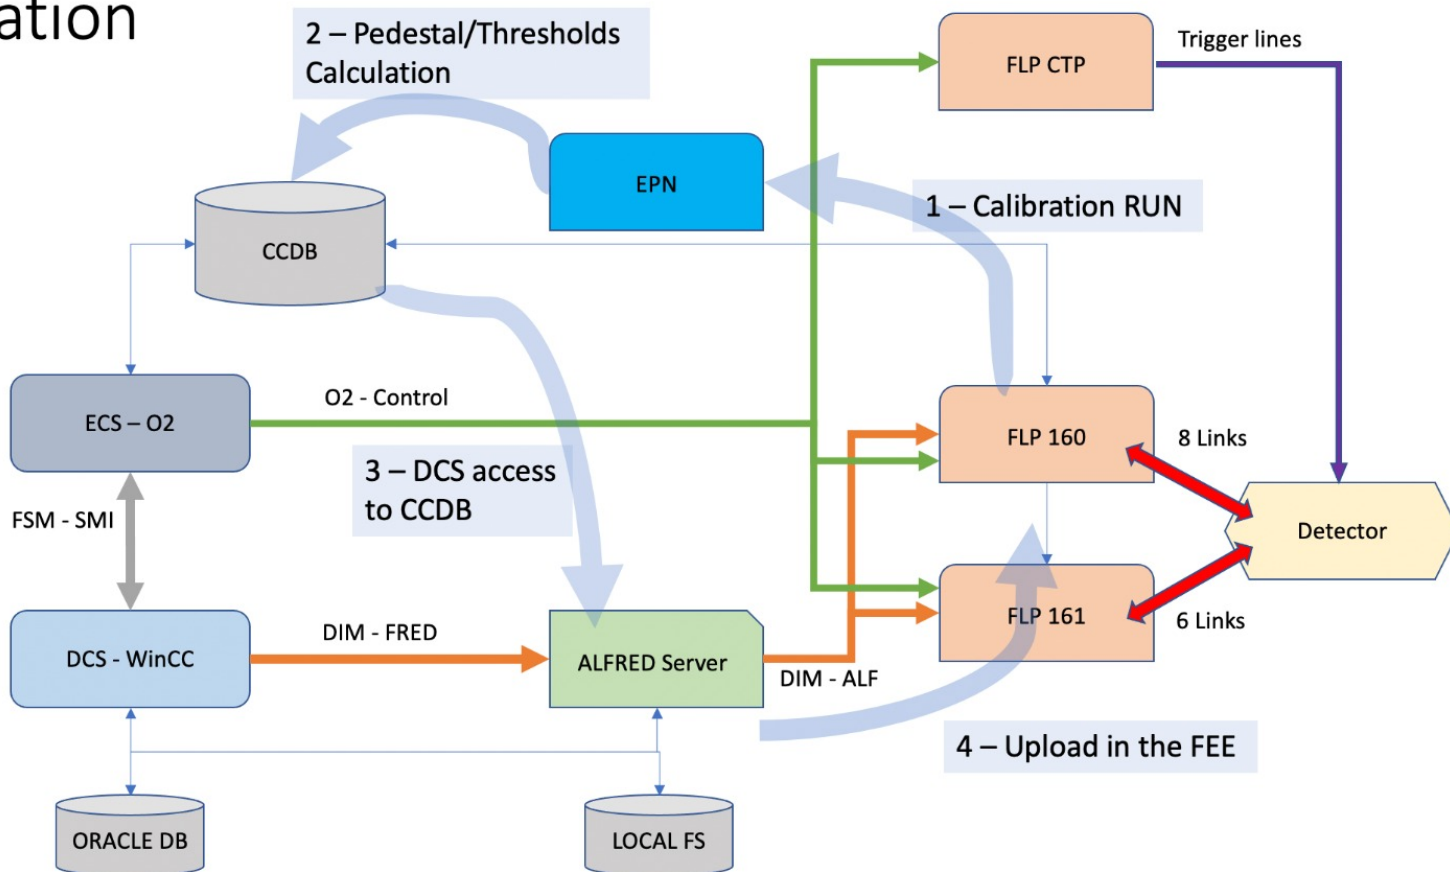

Quality Control

- QC task per monitoring dei raw data implementato, commit nel repository ufficiale eseguito
 - Testato al P2
 - Implementazione del Digits QC in corso

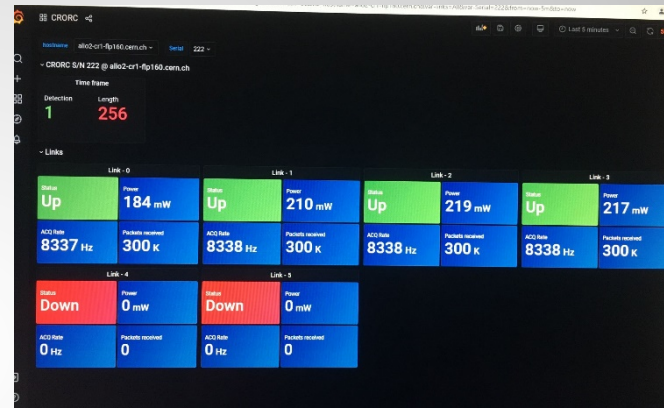

DATA FLOW per la calibrazione dell'HMPID

Calibration

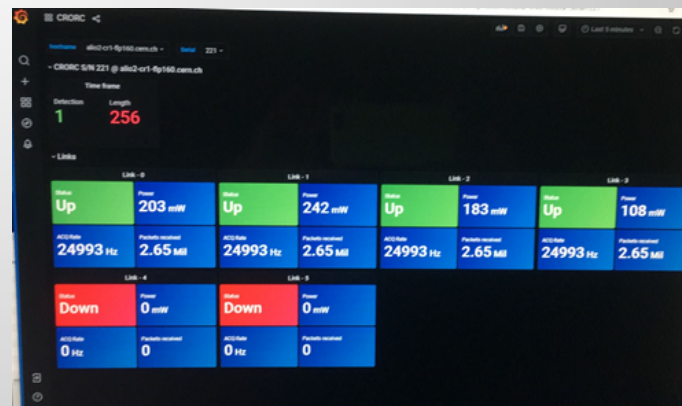

HMPID tests con l'ECS

Una pad/colonna \rightarrow 8.33 KHz

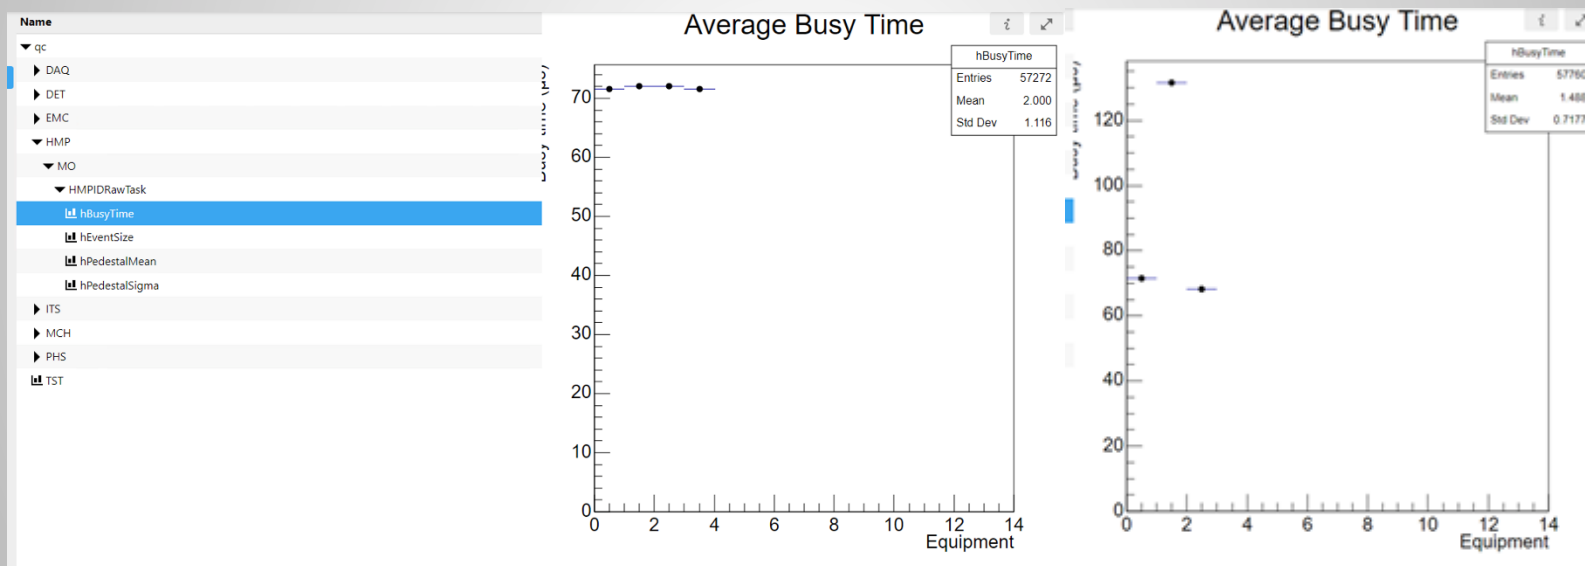

Tutto mascherato \rightarrow 25 KHz

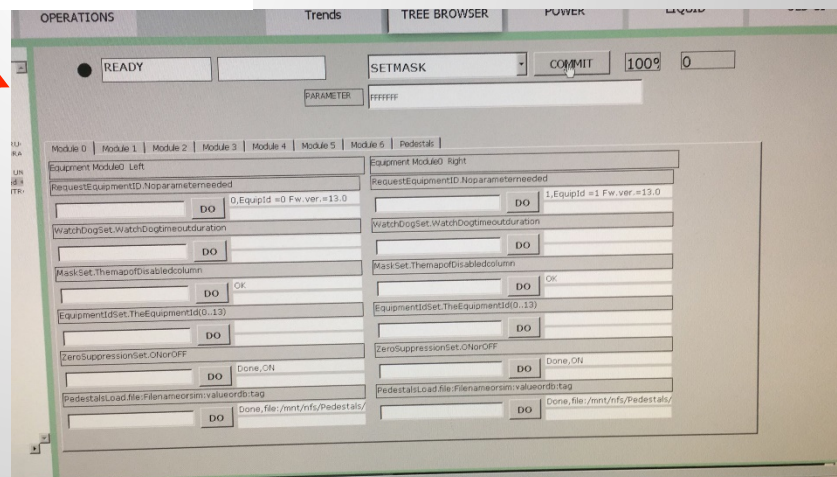

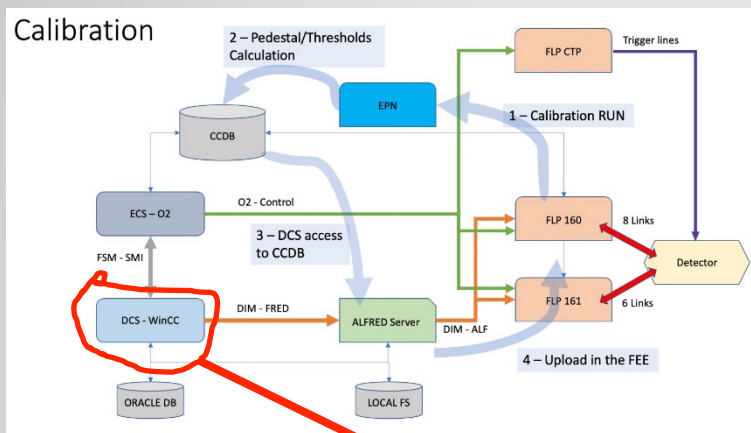

QC: BUSY TIME PER LINK

Busy time per link. Apparently only one C-RORC/FLP is shown alternatively;

Caricamento del piedistalli via ALFRED 'mechanism'

- Misura di precisione della sezione d'urto di interazione inelastica dell'(anti)-deutone nell'intervallo 0.2-2.2 GeV/c (incertezza relativa prevista circa 2%) (proposta da A. Calivà GSI)

Comprensione della sintesi di antinuclei nelle collisioni di ioni pesanti ad alta energia;

Propagazione anti-materia nei raggi cosmici;

.....

- Maggio 2021: effettuata l'installazione di due assorbitori di alluminio davanti ai moduli RICH2 e RICH4,

$$N(p - \Delta p_{\text{abs}}) = N_0(p) \exp(-\Delta x / \lambda_I(p_{\text{int}})), \quad \lambda_I(p_{\text{int}}) = \frac{M}{\rho N_A \sigma_I(p_{\text{int}})} \quad (1)$$

Abstract

We propose a precision measurement of the (anti)-deuteron inelastic cross section on an aluminum target using the HMPID. Two absorbers of aluminum with a thickness of $\Delta x = 8$ cm will be installed parallel to the beam in front of 2 HMPID chambers. The (anti)-deuterons impinging on the two absorbers will be identified using the dE/dx measured by the TPC and the time-of-flight measured by the TOF detector. The number of secondary particles produced in the hadronic interactions with the target nuclei and the number of (anti)-deuterons crossing the full material thickness will be measured using the HMPID. The expected statistical precision of this measurement is expected to be in the range 5-10% in the momentum interval $0.2 \leq p < 2.2$ GeV/c for p-Pb collisions at $\sqrt{s_{NN}} = 8.8$ TeV and 2-4% in the momentum interval $0.2 \leq p < 1.4$ GeV/c for Pb-Pb collisions at $\sqrt{s_{NN}} = 5.5$ TeV in Run 3. A systematic uncertainty of maximum 5% is expected based on a conservative estimate. The complementarity of this measurement with other existing approaches regarding the study of the mass number dependence of the (anti)-deuteron inelastic cross section at low momentum is also discussed.

Misura c.s. inelastica dell'anti-deuterone c.s. ALICE

Maggio 2021: eseguita dal gruppo Heidelberg/GSI/CERN l'installazione assorbitori sui RICH 2&4

Assorbitore di alluminio

Obiettivi 2022

- *Gennaio 2022: Rivelatore integrato ECS, con TPC, TOF...per global commissioning al P2;*
- *Recupero automatico in DCS dei canali HV in trip.*

Richieste 2022

Richieste 2022: invariate rispetto a 2021 e pari a 50 KCHF;
 Quota INFN ~36 KEu (con rapporto cambio Eu=1.11CHF)

ALICE-LHC Interface

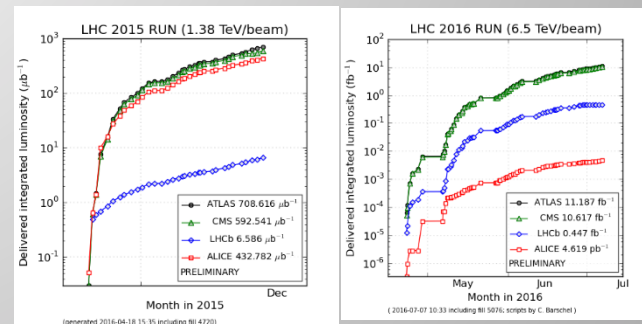

LHC_IF fornisce informazioni a :

LHC_IF large display in the ALICE RC

Vistar Page 1

Official plots of LPC

ALICE

Tasks, people and institutions

- **PL and DPL:** G de Cataldo (INFN Bari,It) and G. Valentino (CIT department , University of Malta);
- **LHC_IF Software coordinator engineer:** A. Franco (INFN Bari, It),
- **Beam instrumentation:** resp. A. di Mauro (CERN, CH) ;
- **BCM hardware and software:** di Mauro, de Cataldo, A. Franco
- **b-by-b calculations (VdM scan, lumi, bkgd,..):** I. Kralick (Slovak Academy of Sciences (SK));
- **LHC_IF infrastructures:** DCS (P. Chochula, CERN, CH as contact person).

Servizi forniti da LHC_IF

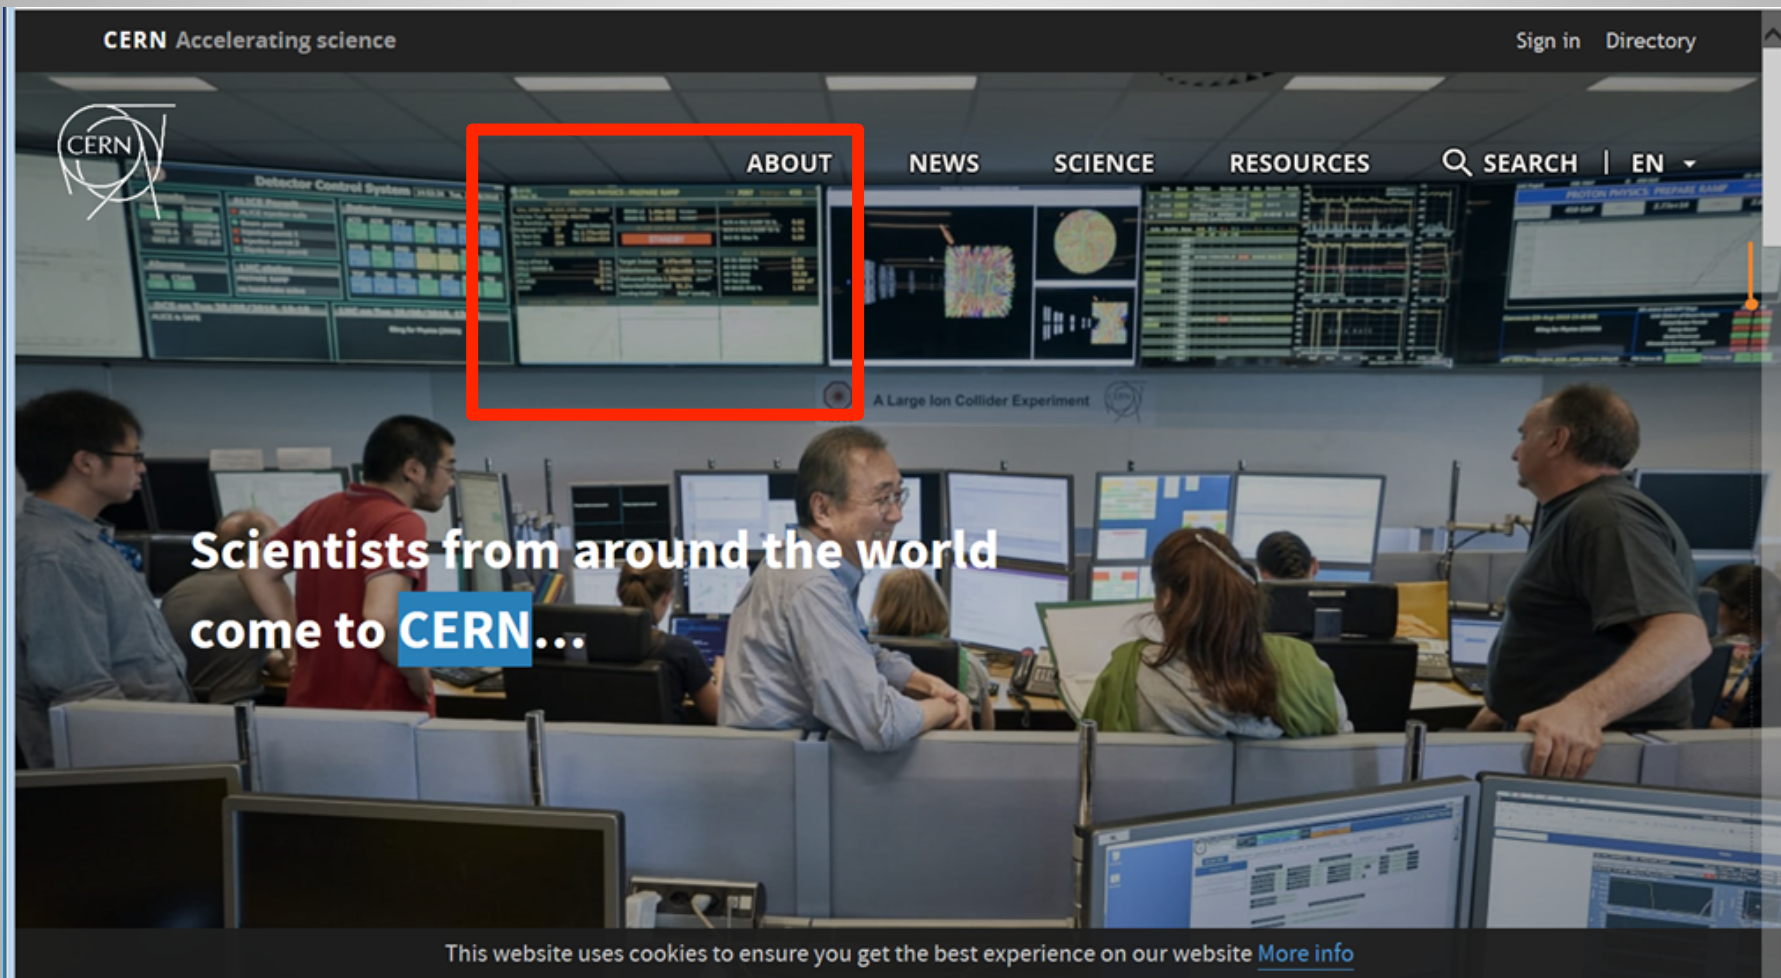

- controllo/coordinazione con ACC per:
 - *Van Deer Meer Scan procedure*
 - *Automatic Luminosity Levelling*
- Assicura la protezione dell'esperimento contro alte frequenze di collisioni;
- Monitor e controllo del *LHC clock Phase Shift* ;
- Manutenzione del software di controllo della strumentazione di fascio :
 - *Beam Loss Scintillator (BLS)*,
 - *Beam Phase and Intensity Monitoring (BPIM)*,
 - *Beam Condition Monitor (BCM)*
- Fornisce il pannello principale sul *Big Screen in ACR*;
- Fornisce la *Shift Leader User Interface* per controllare il funzionamento di esperimento.

Attività di Upgrading 2021-2022

- Migrazione eseguita del progetto nella nuova versione del sistema SCADA WinCC OA 3.16;
- *Some ALICE-LHC Interface Upgrading meetings for Run3 svolti e altri programmati;*
- Raccolte le richieste dai detector e sistemi centrali per monitoring di luminosità;
- *Creazione del set dati di LHC nei Global Run Parameters per il DataProcessLayer (DPL) ;*
- Archiviazione dati GRP in CCDB: LHC_IF → CCDB,...
- *Attività di integrazione collider <->ALICE-LHC Interface;*
- Nuova interfaccia grafica shiftleader e Run coordination per experiment operation;

ALICE-LHC Interface

ALICE DCS UI

ALICE DCS UI: Interfaccia grafica programmabile, componente del DCS centrale per l'esperimento e i singoli rivelatori;

The screenshot displays the ALICE DCS UI interface. At the top, there are status indicators for 'NOT EXISTS' and 'SHUTDOWN NO BEAM'. The main panel is titled 'HIGH RATE LUMINOSITY CONTROL'. It features a table for 'Alarm State' with columns for Group, Came, Went, Threshold (Hz), Delay (s), Message, and Ack. Below this is a 'Rate counter selected : V0 Tot' graph showing a fluctuating signal. To the right, there are 'Alarm Control' buttons (ACKNOWLEDGE, RUNNING, ACTIVATE, PAUSE, SET...) and 'ALICE OPERATION' buttons (Group F, Group E, Group D, Group C, Group B, Group A). An 'Alarm History' table is also visible at the bottom right.

Group	Came	Went	Threshold (Hz)	Delay (s)	Message	Ack
Others			1000000		3 READY INHIBIT on detector group 'Others'	
Group F			1000000		3 READY INHIBIT on detector group 'F'	
Group E			1000000		3 READY INHIBIT on detector group 'E'	
Group D			1000000		3 READY INHIBIT on detector group 'D'	
Group C			1000000		3 READY INHIBIT on detector group 'C'	
Group B			1000000		3 READY INHIBIT on detector group 'B'	
Group A			1000000		3 READY INHIBIT on detector group 'A'	

This screenshot shows a data plot with a red signal and a blue baseline. A histogram is overlaid on the plot, showing the distribution of the signal. The interface includes various control elements like 'Browser', 'test', and 'Managers'.

This screenshot displays a detailed data summary and a tree browser. The 'Publications to LHC of Fill Summary' table is shown below.

Publication to LHC of Fill Summary	Value	Unit
Delivered_Lumi	0.000Hz	
Recorded_Lumi	25.21 Hz	Hz
Peak_Int_Lumi	0.000Hz	

The 'ALICE Luminosity Source' table is also visible:

ALICE Luminosity Source	Value	Unit
Simulator source state	0.000Hz	Hz
Lumi Test Instantaneous	0.000Hz	Hz
Cell Rate Source	1333.000	Hz
Cell Rate Error	0.000	Hz
Cell Rate Stegation St	1.000	Hz
Vertex Count	0.000	

CONCLUSIONE

HMPID

- Integrazione HMPID in O^2 in progresso: ECS, QC, Trigger...
- Ottimi risultati HMPID nei test preliminari di presa dati (vertical slice e milestone weeks);
- Previsto parecchio lavoro nei sistemi centrali per integrare i rivelatori con diverse tecnologie di RO (RCB, CRU) e di trigger (triggered e continuous data taking);
- Obiettivo 2022 per HMPID: piena integrazione nei sistemi centrali per l'experiment commissioning activity. Questa comincerà dal autunno 2021;
- **Richieste finanziarie 2022 : (50 KCHF \times 0.8=40 KCHF, 40/1.1) ~ 36 KEu.**

ALICE-LHC Interface

- Svolte Riunioni x raccolta richieste dai sistemi centrali ;
- Produzione nuova SL_UI;

ALICE DCS UI

- Prodotto componente programmabile per il DCS centrale e per I singoli rivelatori.
