Schmelcher, Busch, ...

Outlook

next steps on Bose polarons

- ◆ quantitatively compare spectra and interferometry measurements to state-of-the-art theory
- ◆ access to quasi-particle residues?
- ◆ effective mass?
- ◆ finite temperature
- ◆ further explore strongly interacting Bose polarons:
 - i. formation dynamics
 - ii. vary bath properties - universal (E_n, k_n, \dots)?
 $|1,0\rangle$ vs. $|1,-1\rangle$ bath - a_B ratio is 2.8!
 - iii. bipolarons?

Camacho-Guardian et al. PRL **121**, 013401 (2018)

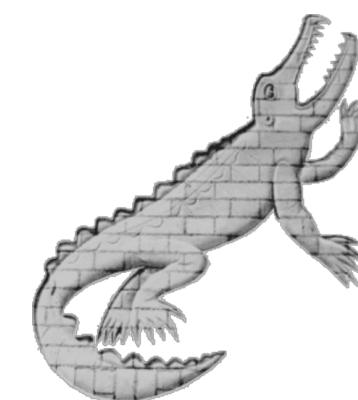

Thank you!

Christoph Eigen
