## Baryon spectroscopy with Hyp-TPC at J-PARC

martedì 18 ottobre 2022 17:40 (20 minuti)

At J-PARC, we built a large acceptance time-projection chamber, named Hyp-TPC, for various studies on baryons. Especially, E45 experiment will study exotic nucleon/Delta resonances via  $p(\pi, 2\pi)$  reactions. We will also introduce the other experiments with Hyp-TPC, namely:

- H-dibaryon search (E42)
- Exotic hyperon resonance search (E72)
- $\Sigma N$  cusp study with  $d(K^-,\pi^-)$  reaction

Autore principale: TANIDA, Kiyoshi (Japan Atomic Energy Agency)

Relatore: TANIDA, Kiyoshi (Japan Atomic Energy Agency)

Classifica Sessioni: Parallel 1

**Classificazione della track:** Baryon structure through meson electroproduction, transition form factors, and time-like form factors
