Searches for rare top quark decay and BSM top interactions in CMS

Thursday, 7 July 2022 11:15 (15 minutes)

In many BSM theories the top quark is hypothesized to have an enhanced non-standard or extremely rare interaction with other SM particles. This presentation covers the latest CMS results in this regard, either from direct searches or precise measurements, including flavor-changing neutral current (FCNC) and tests of discrete symmetries with top quark.
