Recent studies on top quark properties and mass in CMS

Friday, 8 July 2022 15:00 (15 minutes)

Studies of top quark properties using data collected by the CMS experiment are presented, including direct measurements of properties or extractions using differential cross section measurements. The latest results on top mass using multiple kinematic distributions in a likelihood technique as well as the top quark pole mass derived from $t\bar{t}$ +jet cross section will be discussed.

In-person participation

Yes
