Introduction

## $B_{s}^{0} / B^{+}$ratio: strangeness enhancement

Double ratio, 2015 data

- Enhanced strangeness predicted for $p_{\mathrm{T}}<15 \mathrm{GeV}$ in deconfined medium [Phys.Lett.B 595 (2004) 202-208, Phys.Lett.B 735 (2014) 445-450]
- Heavy b, c quarks produced at initial hard scattering, recombining with nearby constituent quarks into hadrons
- This talk: 2018 data, 3 times more statistics compared to 2015 B $^{+}$and $\mathrm{B}_{\mathrm{s}}^{0}$ samples

[^0]
## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$analysis

## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$event selection

- Long-lived B mesons $\rightarrow$ large flight length
- Angle between B flight direction and PV-SV displacement $\cos \theta=\hat{r}_{\mathrm{B}, \text { flight }} \cdot \hat{p}_{\text {T, eco }}$ Expect $\hat{p}_{\text {T, eco }} \| \hat{r}_{\mathrm{B}, \text { flight }}$
- $x^{2}$ Probability of the decay vertex
- Additionally for $\mathrm{B}_{\mathrm{s}}^{0}$ :

$$
m_{\mathrm{K}^{+} \mathrm{K}^{-}}-m_{\phi}
$$

- $p_{\mathrm{T}}$ of the daughter tracks

## Cut optimization

- Maximize the discriminating power by training a machine learning algorithm in the multi-dimensional parameter space.
- Boosted Decision Tree (BDT):
- Select on each variable sequentially in a tree structure
- Train many weak classifiers with subsets of randomly selected samples, emphasizing the misclassified events

## Cut optimization

- Maximize the discriminating power by training a machine learning algorithm in the multi-dimensional parameter space.
- Boosted Decision Tree (BDT):
- Select on each variable sequentially in a tree structure
- Train many weak classifiers with subsets of randomly selected samples, emphasizing the misclassified events

- Training samples: signal MC vs side-band data

## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$Yield extraction

- First 50+ observation of $\mathrm{B}_{\mathrm{s}}^{0}$ in PbPb collision
- $\mathrm{B}^{+}$peaking background:
- Partially reconstructed B decay (e.g. $\mathrm{B}^{0} \rightarrow \mathrm{~J} / \psi\left(\mathrm{K}^{*} \rightarrow \mathrm{~K}^{+} \pi^{-}\right)$
- misidentified $\pi$ in $\mathrm{B}^{+} \rightarrow \mathrm{J} / \psi \pi^{+}$

## Efficiency correction

- Ideally, $\varepsilon=\frac{N \text { of reco }}{N \text { of gen }}$

## Efficiency correction

- Ideally, $\varepsilon=\frac{N \text { of recon }}{N \text { of gen }}$
- But $p_{\mathrm{T}}$ distribution depends on MC model
$\Rightarrow$ Take $p_{\mathrm{T}}$ distribution from data $\varepsilon=\sum_{i=0}^{N} \frac{\varepsilon_{i}\left(p_{T}\right) n_{i}\left(p_{\mathrm{T}}\right)}{n_{i}\left(p_{\mathrm{T}}\right)}$

## Efficiency correction

- Ideally, $\varepsilon=\frac{N \text { of reco }}{N \text { of gen }}$
- But $p_{\mathrm{T}}$ distribution depends on MC model
$\Rightarrow$ Take $p_{\mathrm{T}}$ distribution from data $\varepsilon=\sum_{i=0}^{N} \frac{\varepsilon_{i}\left(p_{T}\right) n_{i}\left(p_{\mathrm{T}}\right)}{n_{i}\left(p_{T}\right)}$
- But $p_{\mathrm{T}}$ is correlated with $y$
- $\Rightarrow$ Take $p_{\mathrm{T}}, y$ distribution from data

$$
\varepsilon=\sum_{i, j}^{N_{i}, N_{j}} \frac{\varepsilon_{i, j}\left(p_{\mathrm{T}}, y\right) n_{i}\left(p_{\mathrm{T}}\right) n_{j}(y)}{n_{i}\left(p_{\mathrm{T}}\right) n_{j}(y)}
$$

## Efficiency correction

- Ideally, $\varepsilon=\frac{N \text { of reco }}{N \text { of gen }}$
- But $p_{\mathrm{T}}$ distribution depends on MC model
- $\Rightarrow$ Take $p_{T}$ distribution from data $\varepsilon=\sum_{i=0}^{N} \frac{\varepsilon_{i}\left(p_{T}\right) n_{i}\left(p_{T}\right)}{n_{i}\left(p_{T}\right)}$
- But $p_{\mathrm{T}}$ is correlated with $y$
$\Rightarrow$ Take $p_{\mathrm{T}}, y$ distribution from data

$$
\varepsilon=\sum_{i, j}^{N_{i}, N_{j}} \frac{\varepsilon_{i, j}\left(p_{\mathrm{T}}, y\right) n_{i}\left(p_{\mathrm{T}}\right) n_{j}(y)}{n_{i}\left(p_{\mathrm{T}}\right) n_{j}(y)}
$$

- But $\varepsilon_{i, j}\left(p_{\mathrm{T}}, y\right)$ is too different from normal distribution
- Use inverse efficiency

$$
\frac{1}{\varepsilon}=\sum_{i, j}^{N_{i}, N_{j}} \frac{\frac{1}{\varepsilon_{i, j}\left(p_{\mathrm{T}}, y\right)} n_{i}\left(p_{\mathrm{T}}\right) n_{j}(y)}{n_{i}\left(p_{\mathrm{T}}\right) n_{j}(y)}
$$

## $\mathrm{B}_{\mathrm{s}}^{0}$ and $\mathrm{B}^{+}$yields

- Enhanced yields in PbPb at low $p_{\mathrm{T}}$ and high centrality
- Dominant uncertainty:
- Data/MC disagreement on selection variables (BDT score)
- Tracking efficiency

## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$yield ratio

$$
\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+} \text {vs } p_{\mathrm{T}}
$$

- Compatible with PbPb recombination models
- Compatible with pp data

## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$vs centrality

both plots: PLB 829 (2022) 137062

- Indicate higher $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$ratio in central events but not significant

## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$yield ratio compared with charm

arXiv:2109.01908
CMS-PAS-HIN-18-017
PLB 827 (2022) $1369\{$

- Similar magnitudes of $\mathrm{D}_{\mathrm{s}} / \mathrm{D}^{0}$ and $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$

## Summary

## Updated $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$ratio with the 2018 CMS data

- First observation of $\mathrm{B}_{\mathrm{s}}^{0}>5 \sigma$ in PbPb collision
- Enhancement at low $p_{\mathrm{T}}$ but not significant with the current precision

## Outlook

- Update with 2017 pp data at the LHC coming soon
$\rightarrow R_{\text {AA }}$ measurement
- New PbPb run at the end of this year

The MIT group's work was supported by US DOE-NP

## Backup

## Muon selection for $\mathrm{B}^{+} / \mathrm{B}_{\mathrm{s}}^{0}$

- $p_{\mathrm{T}}^{\mu}>3.5$ for $\left|\eta^{\mu}\right|<1.2$
- $p_{\mathrm{T}}^{\mu}>1.5$ for $2.1<\left|\eta^{\mu}\right|<2.4$
- $p_{\mathrm{T}}^{\mu}>\left(5.47-1.89\left|\eta^{\mu}\right|\right)$ for $1.2<\left|\eta^{\mu}\right|<2.1$
- $m_{\mu^{-} \mu^{+}}$in $\mathrm{J} / \psi$ or $\phi$ range
- Probability of $2 \mu$ fitted to a common vertex

## Systematic uncertainty for $\mathrm{B}^{+} / \mathrm{B}_{\mathrm{s}}^{0}$

- Due to fit modeling
- Signal variation: 3-Gaussian, 10\% variation of its width, fixing common mean to MC
- Background variation: low-order polynomial for combinatorial background
- Estimated with squared sum of maximum variations
- Due to limited MC sample size
- 1000 generated $\alpha \times \varepsilon 2$ D maps
- Estimated with the width of the $1 /\langle\alpha \times \varepsilon\rangle$
- Due to data/MC discrepancy
- Data/MC ratio from sPlot method are used to re-weight the MC distribution

## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$systematic uncertainty

|  | $\mathrm{B}^{+}$ |  |  | $\mathrm{B}_{\mathrm{s}}^{0}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Centrality class | 0-30\% | 30-90\% | 0-90\% | 0-30\% | 30-90\% | 0-90\% |
| Muon efficiency | +4.2 | +4.1 | +4.2 | +5.5 | +4.6 | +5.3 |
| Muon efficiency | -3.8 | -3.8 | -3.8 | -4.9 | -4.2 | -4.7 |
| Data/MC agreement | 13 | 8.0 | 12 | 3.1 | 3.7 | 3.2 |
| MC sample size | 3.2 | 2.2 | 2.4 | 6.6 | 2.3 | 4.4 |
| Fit modeling | 2.5 | 2.8 | 2.6 | 2.5 | 3.2 | 2.3 |
| Tracking efficiency | 5.0 | 5.0 | 5.0 | 10 | 10 | 10 |
| $T_{\text {AA }}$ | 2.0 | 3.6 | 2.2 | 2.0 | 3.6 | 2.2 |
| $N_{\text {MB }}$ | 1.3 | 1.3 | 1.3 | 1.3 | 1.3 | 1.3 |
| Branching fraction |  | 2.9 |  |  | 7.5 |  |

- Data/MC disagreement from reweighted $\alpha \times \varepsilon$ using the sPlot method

## $\mathrm{B}_{\mathrm{s}}^{0} / \mathrm{B}^{+}$production yield calculation

$$
\frac{1}{T_{A A}} \frac{\mathrm{~d} N}{\mathrm{~d} p_{\mathrm{T}}}=\frac{1}{2 \mathcal{B} N_{\mathrm{MB}} T_{A A}} \frac{N_{\mathrm{obs}}\left(p_{\mathrm{T}}\right)}{\Delta p_{\mathrm{T}}} \times\left\langle\frac{1}{\alpha\left(p_{\mathrm{T}}, y\right) \times \varepsilon\left(p_{\mathrm{T}}, y\right)}\right\rangle
$$

- 1/2: raw yield measured with particles and antiparticles
- $T_{A A}=(5.6 \pm 0.2) \mathrm{mb}^{-1}$
- Acceptance and efficiency corrected using a fine $\left(p_{\mathrm{T}}, y\right)$ 2D map
- Efficiency map corrected by data/MC scale factors with tag-and-probe (with J/ $\psi$ )
