Spectroscopy and decays of b-hadrons at LHCb

Saturday, 9 July 2022 12:05 (15 minutes)

The measurements of spectroscopy and decays of b-hadrons can provide invaluable experimental input to improve our knowledge of QCD. The LHCb experiment uniquely covers the b-hadron enriched kinematic region and has excellent performance in reconstructing and identifying b-hadron decays. It has been making leading efforts in such studies. In this talk, the latest results on b-hadron spectroscopy and decay studies will be presented.
