## Studies of conventional doubly heavy hadrons at LHCb

*Saturday, 9 July 2022 11:35 (15 minutes)*

Conventional doubly heavy hadrons, including quarkonium, are good probe for the non-perturbative regime of QCD, thus important to improve our understanding of the strong interaction. The LHCb experiment is dedicated to heavy flavour physics. The large heavy hadron dataset and excellent performance of the detector make it an ideal laboratory for studies of doubly heavy hadrons. The talk presents a summary of recent results from LHCb.

### In-person participation

Yes
