LHCb HLT2: Real-time alignment, calibration, and software quality-assurance

Saturday, 9 July 2022 12:15 (20 minutes)

LHCb's second level trigger, deployed on a CPU server farm, not only selects events but performs an offlinequality alignment and calibration of the detector and uses this information to allow physics analysts to deploy essentially their full offline analysis level selections (including computing isolation, flavour tagging, etc) at the trigger level. This "real time analysis" concept has also allowed LHCb to fully unify its online and offline software codebases. We cover the design and performance of the system which will be deployed in Run 3, with particular attention to the software engineering aspects, particularly with respect to quality assurance and testing/limiting failure modes.

In-person participation

Yes

Primary authors: NEUBERT, Sebastian (Bonn University); SAUR, Miroslav (TU Dortmund (DE))

Presenter: SAUR, Miroslav (TU Dortmund (DE))

Session Classification: Operation, Performance and Upgrade (Incl. HL-LHC) of Present Detectors

Track Classification: Operation, Performance and Upgrade (Incl. HL-LHC) of Present Detectors
