Overview of the LHeC and FCC-he accelerator concepts

Thursday, 7 July 2022 14:45 (20 minutes)

In this talk the current status and plans are presented on the LHeC accelerator concept, towards the new HEP strategy update in about 5 years time. We review the ERL and the IR including the possibility of a joint eh/hh interaction region. The talk also covers FCC-he and refers to a separate presentation of the ERL demonstration facility PERLE. It is based on the comprehensive Conceptual Design Report update [1] and the recent work [2].
