Conceptual DAQ Design (with HLT)

The Triple Challenge of the HLT

Efficiency curve of the
single electron TDR trigger

Efficiency

- Select the events of interest
- Generalist vs. specialized triggers

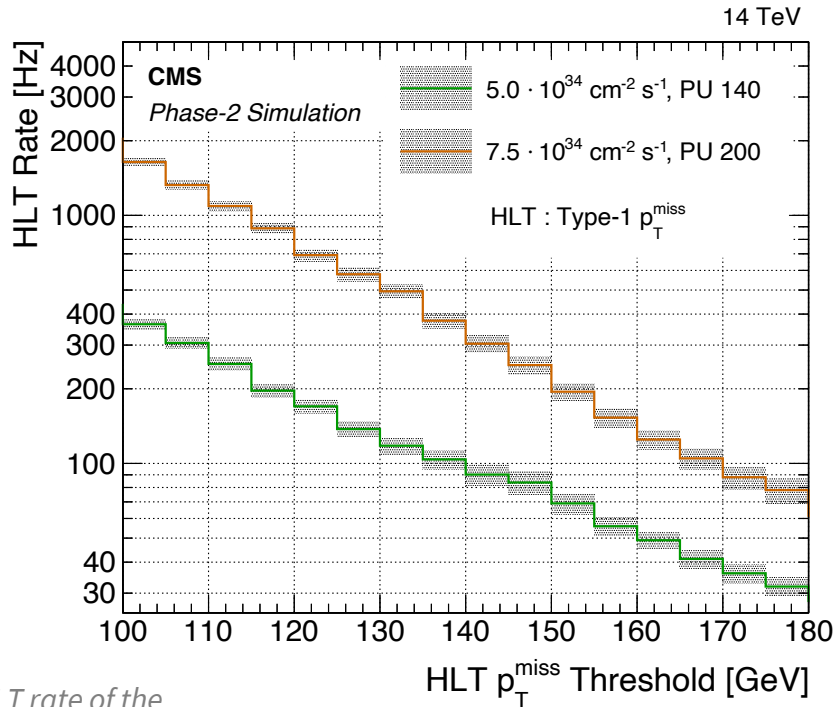

Rate

- Discard uninteresting events
- Output rate / bandwidth envelope

Timing

- Quasi-real time analysis
- Dependent on HLT farm size

Phase-2 HLT: Physics Objects, Paths, Menu

Physics objects

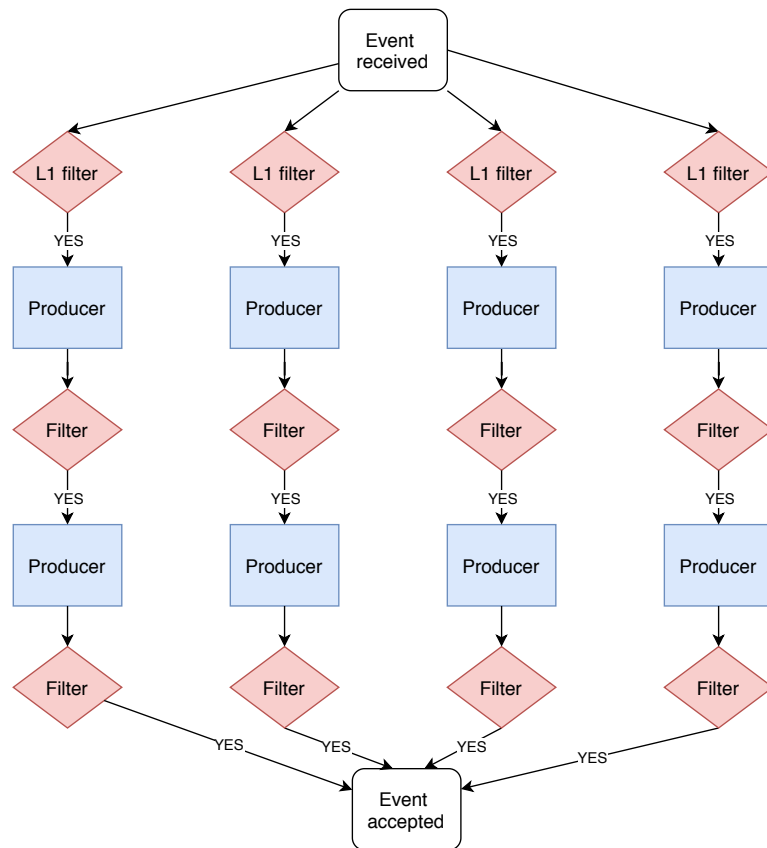

- ❑ Same algorithms as offline
- ❑ Same framework (CMSSW)
- ❑ Added emphasis in execution speed

HLT paths

- ❑ Targets a given final state
- ❑ Sequence of filters / producers
- ❑ Early filtering

HLT menu

- ❑ Collection of HLT paths
- ❑ Reuse variables among paths
- ❑ Multithreaded since 2016
 - Parallel event processing
 - Simultaneous module execution

Online Reconstruction

Tracking, HGCAL

- Iterative, high-granularity detectors
- Tuned for online constraints

Electrons and photons

- (ECAL / HGCAL)-seeded objects
- Extensive ID to reduce backgrounds

Muons

- Seeded from L1TkMuon objects

Jets, missing p_T

- Extensive pileup mitigations

Tau leptons, b-tagged jets

- Machine learning techniques for ID

Heterogeneous Computing

Ubiquitous solution for CMS computing needs by 2027

- ❑ Heterogeneous HLT farm already starting from Run-3.

Phase-2 heterogeneous HLT

- ❑ Under development: HGCal local reconstruction, Patatrack pixel reconstruction.

Effective farm cost

- ❑ 0.70 CHF/HS06 in 2028 – 50% code ported
- ❑ 0.22 CHF/HS06 in 2032 – 80% code ported

Conclusions

Reconstruction advanced enough to build a simplified menu for the TDR.

- ❑ Fully realistic (no simulation shortcuts) and integrated in CMSSW.
- ❑ Basic single-object paths with performance very close to Phase-1.
- ❑ Solid foundation to evolve into real menu to be deployed in Phase-2.

Rates and timing under control.

- ❑ Simplified menu keeps to 50% of the target Phase-2 rate.
- ❑ Large p_T threshold increases are not needed.
- ❑ Timing structure of the menu understood.
 - In order to meet the overall constraints for the HLT farm, we need to improve the overall timing by a small factor (1.5-2x).

Heterogeneous HLT under development.

- ❑ Initial deployment already in Run3.

LHC Long Term Schedule

Last updated: January 2022

CMS Phase-2 Upgrade Overview

Endcap Calorimeter

- 3D showers + precise timing
- Si, Scint+SiPM in Pb/W-SS

Tracker

- Si-Strip/Pixels increased granularity
- Tracking in L1-Trigger
- Extended coverage to $\eta \approx 3.8$

MIP Timing Detector

- Precision timing with:
 - - Barrel layer: Crystals + SiPMs
 - - Endcap layer: Low Gain Avalanche Diodes

L1-Trigger

- Tracks in L1-Trigger at 40 MHz
- PFlow selection
- 750 kHz L1

Barrel Calorimeters

- ECAL readout at 40 MHz w/ precise timing at 30 GeV
- ECAL/HCAL new back-end boards

Muon Systems

- DT/CSC new FE/BE readout
- RPC back-end electronics
- New GEM/RPC $1.6 < \eta < 2.4$
- Extended to $\eta \approx 3$

DAQ and High-Level Trigger

- Full optical readout
- Event network 60 tb/s
- Heterogeneous architecture
- 7.5 kHz HLT
