The IDEA detector concept for FCCee

Friday, 8 July 2022 09:30 (15 minutes)

The future circular electron-positron collider (FCCee) is receiving much attention in the context of the FCC Feasibility Study currently in progress in preparation for the next EU strategy update. We present IDEA, a detector concept optimized for FCCee and composed of a vertex detector based on DMAPS, a very light drift chamber, a silicon wrapper, a dual readout calorimeter outside a thin 2 Tesla solenoid and muon chambers inside the magnet yoke. In particular we discuss the physics requirements and the technical solutions chosen to address them. We then describe the detector R&D currently in progress and show the expected performance on some key physics benchmarks.

In-person participation

No

Primary authors: BEDESCHI, Franco (Istituto Nazionale di Fisica Nucleare); GAUDIO, Gabriella (Istituto Nazionale di Fisica Nucleare)

Presenter: GAUDIO, Gabriella (Istituto Nazionale di Fisica Nucleare)

Session Classification: Detectors for Future Facilities, R&D, novel techniques

Track Classification: Detectors for Future Facilities, R&D, novel techniques
