An overview on low mass scalars at future lepton colliders

Friday, 8 July 2022 20:10 (20 minutes)

Although many suggestions for BSM searches at future colliders exist, most of them concentrate on additional scalars that have masses higher than the current SM scalar mass. I will give a short overview on the current status of models and searches for scalars with masses below this. Based on <https://arxiv.org/abs/2203.08210>

In-person participation

Yes
