LHC Benchmark scenarios in the TRSM

Friday, 8 July 2022 20:10 (20 minutes)

The TRSM is a new physics model that extends the scalar sector of the SM by two additional CP even scalars. It leads to a large variety of interesting signatures, some of which have not yet been explored by the LHC experiments. I will also discuss the option to explore the hhh final state within this model.

In-person participation

Yes
