Footprints of Majorana Neutrinos in Rare Meson Decays

Saturday, 9 July 2022 18:25 (17 minutes)

Most of the analyses of rare meson decays in the literature assume that neutrinos are Dirac particles and consequently do not consider the possibility of lepton number violating interactions. I will present efficient strategies that would allow experimental collaborations in the future to give us insights whether footprints of Majorana neutrinos might be present in their data.

In-person participation

Yes
