CYGNO MEETING - 28/04/22

DAQ development

There was a meeting about plans for “future” DAQ system to equip the demonstrator.

A DAQ group (now joined by Francesco Borra, a new student) has already started to work on LIME 2 setup on:

- the trigger module (provided by Herman);
- PMT pulsing and acquisition for calibration purpose;

The idea is to resume DAQ meetings: Monday at 14.30 - CET (not in phase with Simulation meetings);

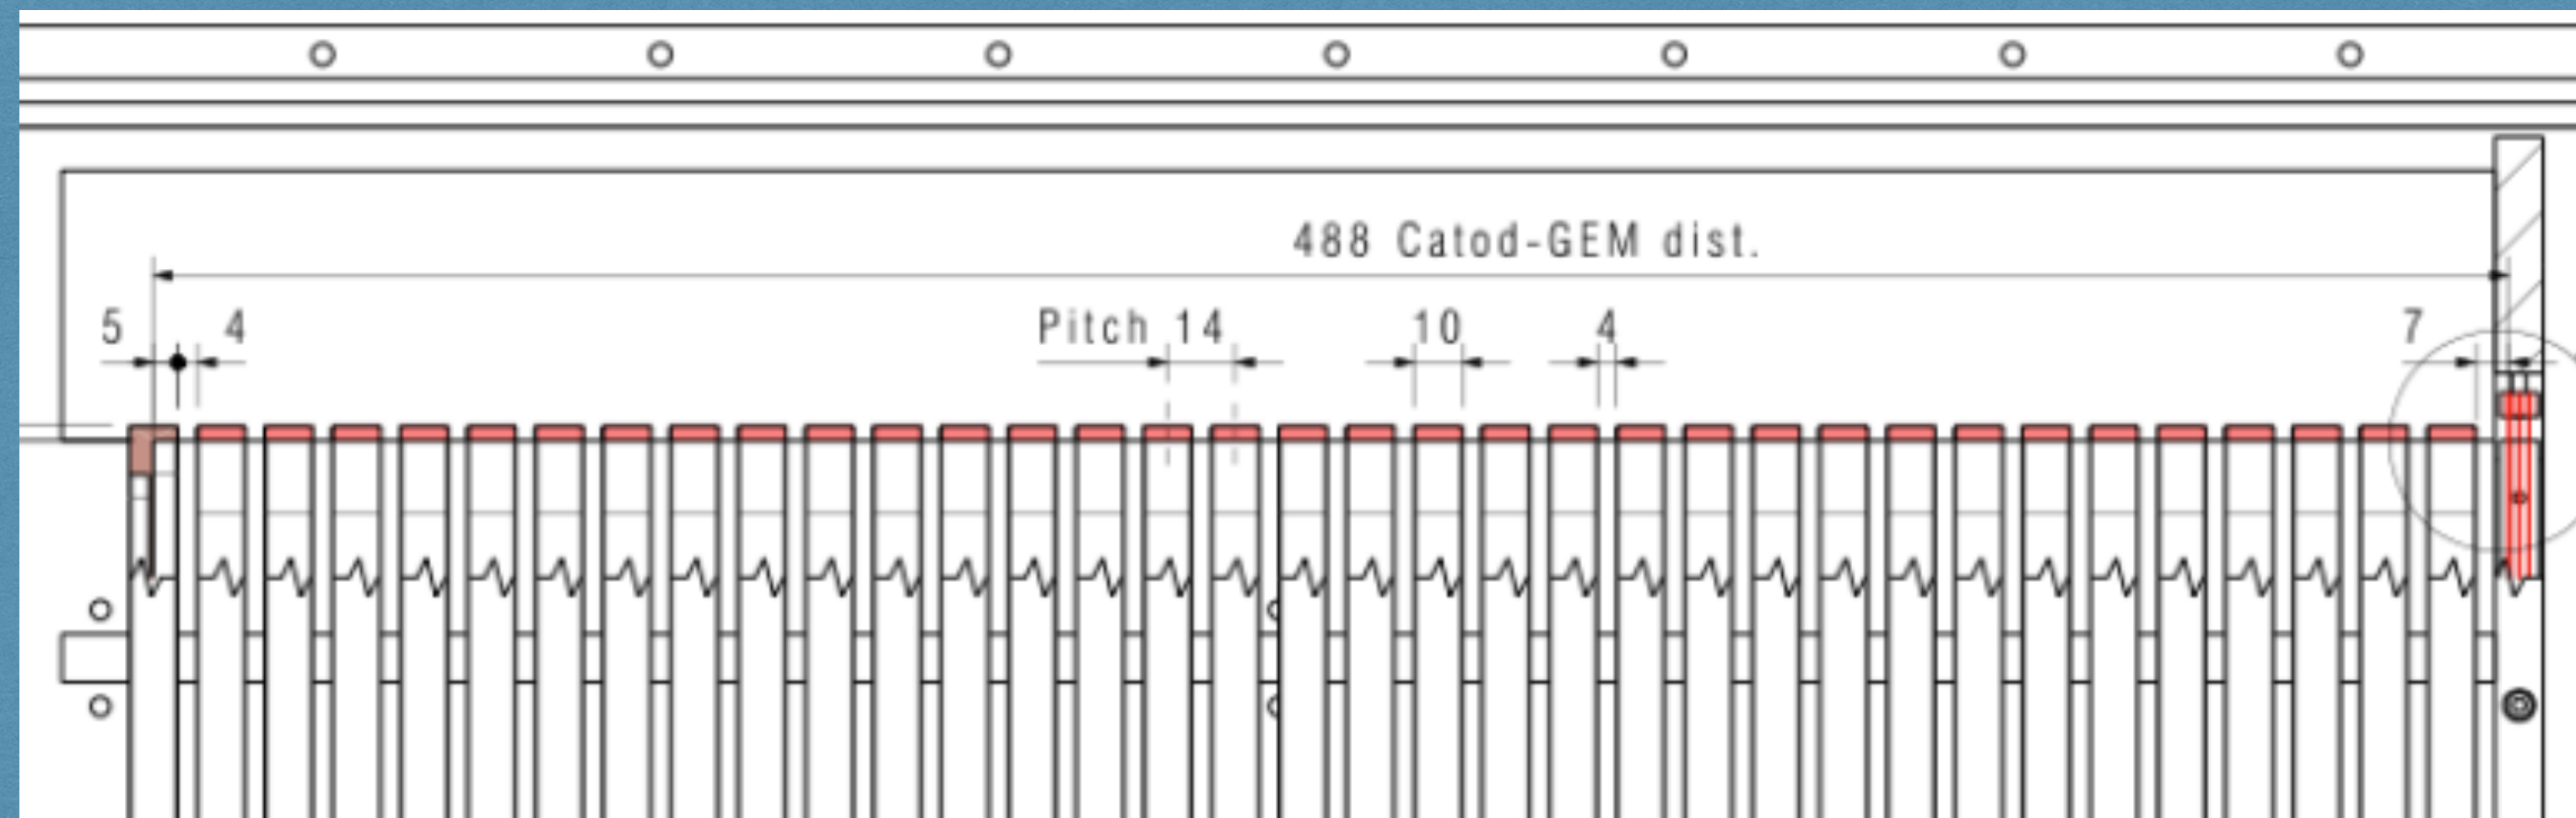

LIME useful info

I'm collecting info on LIME geometry on the [wiki page](#);

I'll upload also some drawings;

I checked Fabrizio's proposal and I think it's fine.

We should start uploading useful pictures and plots

Distance source-drift volume: 135mm
