Ricerca di decadimenti rari del B con energia mancante a SuperB

Friday, 29 April 2011 15:15 (20 minutes)

We present the current experimental status and the perspectives at SuperB on searches for rare B decays with missing energy in the final state. Experimental improvements due to the detector design will be illustrated. The expected constraints on parameters entering New Physics models will also be discussed.

Presenter: MANONI, Elisa (PG)

Session Classification: Fisica dei Saponi Pesanti - II
