

# News 24/3/2022

- 1st FCC Italy Workshop in Rome just finished: thanks to all, I think we showed the quantity and quality of the work done for simulation and physics
- Need to plan the next steps to organise ourselves and the work of the new people joining the effort (fellows, summer students, assegni...):
  - FCC week end of May
  - Conferences
  - INFN Referees milestones
- New Physics Groups will allow more options to discuss technical aspects of analyses. Physics Performance will have also working meetings on “transverse” topics ( flavour tagging, PID, etc...)
- Software tools developing faster than documentation: need to be patient. Every new user discovers something that is missing.
  - Feedback from experts is very fast in general. Use Forum, but also private mail.
  - Need to work on documentation at least for our needs
  - Need to start using the CNAF resources and have examples for newcomers in Italy
  - Still looking for 1-2 persons to help out on user support, MC production etc.
- RD-FCC Web page: incomplete and needs work. It’s the place to add what is going on also for our use (software docs, slides, papers, internal notes)
