Third Gravi-Gamma Workshop: The multimessenger view of the black hole life cycle

Contribution ID: 21 Type: Invited talk

What can we learn about stellar- and intermediate-mass black holes from multi-messenger observations?

Wednesday, 5 October 2022 16:00 (30 minutes)

Our understanding of the formation paths of stellar-mass and intermediate-mass black holes has drastically changed in recent years. In particular, the masses of black hole binaries observed in gravitational waves are challenging existing theories. In this talk I will discuss the main open questions and the prospects of answering them with multi-messenger observations.
