Gruppo Teorico LNF

GENNARO CORCELLA

Coordinatore da 01/07/2022

- 1. Informazioni su gruppo ed anagrafica**
- 2. Attività sigle locali CSN4**

Anagrafica Gruppo IV 2022-23

Nome	Posiz.	Qual.	Aff.	ENP	TASP	TIME2QUEST	DOT4	CSNI	CSNII	CSNIII	CSNV	Tot
Bellucci Stefano	Dip.	I Ric.	CSN IV			100						100
Benfatto Maurizio	Dip.	I Ric.	CSN III			40				60		100
Corcella Gennaro	Dip.	I Ric.	CSN IV	100								100
Del Duca Vittorio	Dip.	I Ric.	CSN IV	100								100
Gionti Gabriele	Ass.	I Ric.	CSN IV				50					50
Nardi Enrico	Dip.	Dir.Ric.	CSN IV		100							100
Pancheri Giulia	Ass.	Ass.Sen.	CSN IV	0								0
Plascencia Alexis	Ass.Ric.	Ass.Ric.	CSN IV		100							100
Sengupta Shree	Ass.Ric.	Ass.Ric.	CSN IV	100								100

Assegnisti di ricerca ‘Nicola Cabibbo’:

G. Grilli di Cortona: LNF sino a Ottobre 2022, poi INFN Roma I

A. Plascencia: LNF sino a Ottobre 2023

D. Sengupta (Ph.D. Oklahoma, postdoc Taiwan) da Ottobre 2022 in ENP (2+1 anni)

Nuovo ricercatore III livello in arrivo a fine 2022

Totali FTE (ottobre 2022):

ENP (Exploring New Physics): FTE=3.0

Time2Quest (Theoretical methods for 2D materials): FTE=1.4

TAsP (Theoretical Astrophysics): FTE=2.0

Totale sigle: FTE=6.4 (7.4 con nuovo ricercatore nel 2023)

Dot. Gr. IV: FTE=0.5

Totale Sigle+Dot. Gr. IV: FTE=6.9 (7.9 nel 2023)

IS Exploring New Physics (ENP) – Nodi: LNF, RM1, RM2, NA, PG

Responsabile Nazionale: G. D'Ambrosio (NA); Responsabile LNF: G. Corcella

Nodo LNF:

G. Corcella (FTE=1, Ric. II Livello), V. Del Duca (FTE=1, Ric. II Livello, in congedo a ETH Zurigo sino al 15/12/2022), D. Sengupta (FTE=1, assegnista ‘Cabibbo’, da ottobre 2022)

G. Pancheri (senior associate, FTE=0)

Attività di ricerca su vari aspetti di fenomenologia dei collider:

- Test di precisione del Modello Standard e ricerche di nuova fisica ai collider di alta e bassa energia, in particolare supersimmetria, produzione di Z' , modelli 331, Higgs carichi, quark esotici di carica 4/3 o 5/3.
- Calcoli di precisione e simulazioni Monte Carlo per interazioni forti ed elettrodeboli a LHC e futuri collider (FCC, HL/HE-LHC): ampiezze di scattering ad alta energia a due loop, risommazione di gluoni e fotoni soffici, correzioni NLO elettrodeboli/forti alla produzione di Higgs, frammentazione di quark pesanti a (N)NLO e modelli di adronizzazione, limite di Regge delle ampiezze di scattering, sezione d’urto totale non diffattiva

Gennaro Corcella:

1. Fisica dei quark pesanti nel Modello Standard (top e bottom)

Frammentazione del bottom in $t \rightarrow bW + ng$ ($b \rightarrow B$, $B \rightarrow J/\psi X$) a NNLO+NNLL
(risommazione soffice/collineare e tuning di modelli di adronizzazione a LEP/SLD)

In progress: codice MC per $pp \rightarrow t\bar{t} \rightarrow (bW^+)(\bar{b}W^-) \rightarrow (X_b\ell^+\nu_\ell)(X_{\bar{b}}\ell^-\bar{\nu}_\ell)$ a NNLO

Funzioni di frammentazione NNLO per altri processi ed impatto su m_t

(G.C., M.Czakon, T.Generet, A.Mitov and R.Poncelet, in progress)

ACE per l'analisi di ATLAS sulla misura della massa del top da muoni soffici:

$t \rightarrow bW$, $W \rightarrow \ell\nu$, $b \rightarrow B \rightarrow X\mu \Rightarrow m_t = (174.48 \pm 0.78)$ GeV da $M_{\mu\ell}$

2. Bileptoni $Y^{\pm\pm}$ ($L = \pm 2$) e quark esotici Q di massa $\mathcal{O}(\text{TeV})$ e carica $5/3$ o $4/3$ da vari modelli, come il 331, basato sulla simmetria $SU(3)_C \times SU(3)_L \times U(1)_X$

$pp \rightarrow Y^{++}Y^{--} \rightarrow (T\bar{b})(\bar{T}b) \rightarrow (b\bar{b}\mu^+\mu^+)(b\bar{b}\mu^-\mu^-)$ con $Q(T) = 5/3$ in 331 visibile a FCC- hh (100 TeV, $\mathcal{L} = 3000 \text{ fb}^{-1}$, $m_Y \simeq 1.3 \text{ TeV}$), ma statistica insufficiente a LHC

(G.C., C.Corianò, A.Costantini, P.H.Frampton, PLB'22)

In corso: ricerche di bileptoni da dati di run II di LHC (supporto ad ATLAS Bologna)

$pp \rightarrow Y^{++}Y^{--} \rightarrow (\ell^+\ell^+)(\ell^-\ell^-)$

Chairman of Spring/Summer School 'Bruno Touschek' (LNF) and Linear and Future Colliders 2022 (with G.Panzeri, ECT*)

Relazione sull'attività di ricerca

Vittorio Del Duca

Linee di ricerca

- migliorare l'accuratezza teorica nella produzione di Higgs in associazione con 1 jet.
[1] rappresenta il primo conto esatto al NLO, che includa le masse dei quark top e bottom, e la dipendenza da una massa dinamica
- sviluppare uno schema per il calcolo di sezioni d'urto al NNLO in α_s e oltre in modo indipendente dal particolare processo [2], usando l'universalità delle divergenze infrarosse [3]
- potenziare il calcolo di ampiezze di scattering in teorie di gauge, mediante l'analisi nel limite di Regge [4]

Phenomenology of Feebly Interacting Particles

Light dark matter searches with positrons

M. Battaglieri, ... L.Darmé ... E. Nardi + ... *Eur.Phys.J.A* 57 (2021) 8, 253

Invisible decays of axion-like particles: constraints and prospects

L. Darmé, F. giacchino, E. Nardi, M. Raggi, *JHEP* 06 (2021) 009

Correlation between axion and Higgs phenomenology

Phenomenological study of a class of DFSZ QCD axion models that can address stellar cooling anomalies and their interplay with Higgs physics:

Badziak, **Grilli di Cortona**, Tabet, Ziegler **JHEP 10 (2021) 181**

Semi-visible jets studies

Use of the ability to tag semivisible jets to define new event-level variables that can increase the ability of hadron colliders to discover dark confining sectors:

Beauchesne, **Grilli di Cortona**, arXiv:2111.12156 **Contribution to Snowmass 2022**;
Albouy, ..., **Grilli di Cortona** et al., arXiv:2203.09503 **Contribution to Snowmass 2022**;

Dark Matter theory/phenc /Experiment

Study of twin stau as a Dark Matter candidate in Twin Higgs models:

Badziak, **Grilli di Cortona**, Harigaya, Lukawski arXiv:2202.10488, submitted to **JHEP**

Study of Dark Matter at directional direct detection experiments:

1. Proposal to measure the Migdal effect with the LIME Cygno prototype: **Grilli di Cortona**, Messina, Piacentini **J.Phys.Conf.Ser. 2156 (2021) 1** and **PoS PANIC2021 (2022) 051**
2. Amaro, ..., **Grilli di Cortona** et al. arXiv:2202.05480 **Instruments 6 (2022) 1, 6**
3. O'Hare, ..., **Grilli di Cortona** et al. arXiv:2203.05914 **Contribution to Snowmass 2022**

Theoretical constructions beyond the Standard Model

Possible solution to the g-2 anomalies

Show that the discrepancy between the experimental results by the FNAL g-2 Muon Experiment and by BNL, the data driven SM estimate (together with the crucial KLOE and BaBar disagreement) and the lattice estimate could be accounted by a new boson produced resonantly at 1 GeV: [Darmé](#), [Grilli di Cortona](#), [Nardi](#) arXiv:2112.09139, accepted by [JHEP](#)

Light mediator models

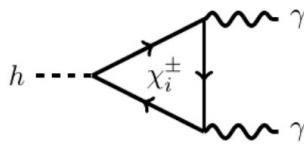

Study of generic light mediator models (kinetic mixing or gauged dark photons, ALPs, ...) as a possible connection to dark sectors or solution to existing problems:

1. Phenomenology of dark photon models in presence of additional heavy degrees of freedom: [Barducci](#), [Bertuzzo](#), [Grilli di Cortona](#), [Massoni Salla](#) **JHEP 12 (2021) 081**;
2. Phenomenology of dark photon models with universal couplings or gauged $B - L$ and $L_\mu - L_\tau$ symmetries at future neutrino experiments exploiting Coherent Nucleus Neutrino Scattering: [Bertuzzo](#), [Grilli di Cortona](#), [Magno Dantas Ramos](#) **JHEP 06 (2022) 075**;
3. Sensitivity of the MUonE experiment to light mediators (dark photons and ALPs): [Grilli di Cortona](#), [Nardi](#) as a Letter in **Phys.Rev.D 105 (2022) 11**

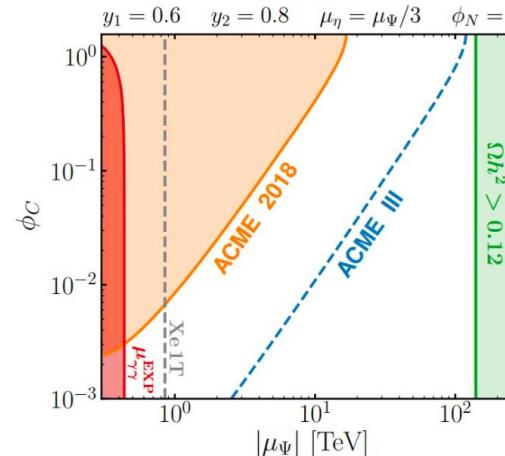

Theoretical constructions beyond the Standard Model

Minimal theory for gauged Baryon Number with 6 fermionic representations:

- Dirac dark matter phenomenology
- CP violation and Electric Dipole Moments
- Modified SM Higgs diphoton decay rate

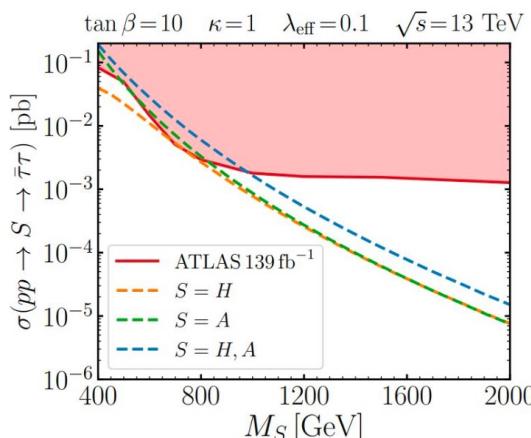

[P Fileviez Perez, AD Plascencia 2112.02103]

Phenomenology of the real scalar triplet extension of the Standard Model. This scenario provides the minimal explanation for the W -boson mass measurement recently reported by the CDF-II collaboration which has a 7σ deviation from the SM prediction.

[P Fileviez Perez, HH Patel, AD Plascencia 2204.07144]

Study on how to probe the Two-Higgs-Doublet-Model (2HDM) that arises from a theory of Pati-Salam quark-lepton unification at the LHC

[P Fileviez Perez, E Golias, AD Plascencia 2205.02235]

Conclusioni

Eccellente produzione scientifica del gruppo teorico dei LNF

Collaborazioni internazionali e locali con gruppi a LNF e dell'area romana

Continua interazione con gruppi sperimentali di Gruppo I e II in loco e non (ATLAS, PADME, DarkSide, JLAB)

Assegno di ricerca Cabibbo (collider o astroparticelle) ben consolidato

Grande attesa per il nuovo ricercatore teorico (ultima assunzione 2011)

Ulteriore rafforzamento del gruppo con ricercatori a tempo indeterminato necessario alla luce dei prossimi pensionamenti nel 2022/2023

Sperando in un definitivo superamento della pandemia, si prevede la ripresa di workshop (tipo JRW) e institutes, per i quali si chiederanno a Div.Ric. e Direzione qualche finanziamento e supporto di segreteria
