## Roma International Conference on Astroparticle Physics

Contribution ID: 28 Type: not specified

## Status of BAIKAL-GVD Project

Thursday, 26 May 2011 12:30 (20 minutes)

Since 2006, the development of a km3-scale neutrino telescope - the Gigaton Volume Detector (GVD) in Lake Baikal - is the central goal of the Baikal collaboration. We present selected results obtained in the course of developing and testing key elements and systems of GVD. We furthermore describe configuration and technical design of GVD and discuss the expected physics sensitivity.
