Fermi Symposium Highlights

Wednesday, 25 May 2011 13:00 (30 minutes)

The 2011 Fermi Symposium was dedicated to results and prospects for scientific exploration of the Universe with the Fermi Gamma-ray Space Telescope and related studies. Topics include: blazars and other active galactic nuclei, pulsars, gamma-ray bursts, supernova remnants, diffuse gamma radiation, unidentified gamma-ray sources, and searches for dark matter. A summary of the most interesting new results will be presented.
