Search for Dark Matter Candidate with the ATLAS detector

Wednesday, May 25, 2011 5:25 PM (20 minutes)

Supersymmetry is one of the more appealing theory beyond the Standard Model, and provides a natural Dark matter candidate.

First ATLAS searches for signals of Supersymmetry in proton-proton collisions at the LHC will be reported.

These searches are performed in various channels containing different lepton and jet multiplicities in the final states; the full data sample recorded in the 2010 LHC run, corresponding to an integrated luminosity of 35 pb⁻¹, has been analysed.
