

Beam parameters better than PS: 120 GeV proton low-emittance beam

Particle position on upstream GEM

Particle position on downstream GEM

Particle position from GEM at aerogel

Particle slope from GEM

Large area MPPC matrices provide a good gym for the dRICH extended SiPM detector (eRD102 deliverable in sprin 2023)

H13700 MAPMT / MAROC3 digital readout

Photon yield higher but resolution worse than PS: need to improve timing
 Define procedures for calibration and pedestals (gain + thresholds)

Outer mean radius - Corrected - All

Outer ring photons

Radius vs Photon

Time distribution

Outer single photon radius

Outer single photon radius - corrected

3m

Alignment system (laser + reference)

Upgrade of the support carts

Gas:

submitted request to CERN (David Jaillet) under RD51-TS account
2x 10 lt bottles (~1 available from 2021 campaign)

Aerogel:

contacts with Aerogel Factory (Japan)

vary refractive index +/- 0.002

extended area ?

~ 11 x 11 cm² for low-temperature drying

~ 14 x 14 cm² for high-temperature drying

dedicated R&D

Pre-calibrate the complete readout chain

Automatize procedures for online re-calibration and monitoring

Prepare an online display and analysis

Characterize optical components

Refine simulations

INFN

632 nm and 407 nm picosecond pulsed laser light

Light concentrator to scan the sensor surface

Flexible layout supporting various sensors and

Front-End electronics

Laser head +
collimator

MAPMT holder

Facility to study detailed mirror optical properties (surface map, radius of curvature, reflectivity)

Planarity

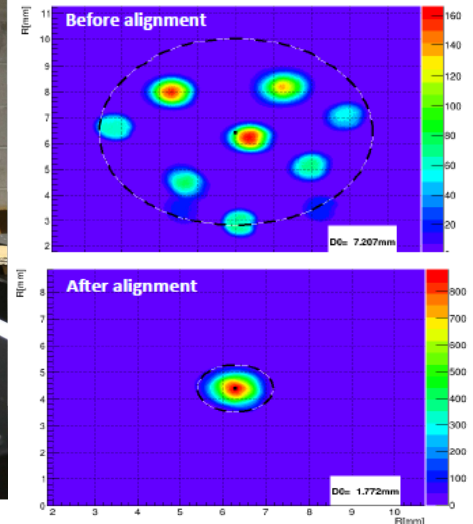

Reflectivity

Shack-Hartmann: Aberrations

Point Image: Alignment

Facility to study detailed aerogel optical properties
 (refractive index, surface planarity, forward scattering)
 safe handling and Interplay with gas radiator

Spectrophotometer

Characterization station

Controlled storage

Surface map by laser setup

vs

touch machine
