On Fermi-LAT, H.E.S.S. and the Cherenkov Array Telescope Sensitivity to Dark Matter Annihilation

Thursday, 14 May 2009 19:20 (20 minutes)

I discuss how one can extend Fermi-LAT and H.E.S.S. limits on gamma-ray lines from dark matter annihilation to energies larger than currently accessible. Moreover, I present Fermi-LAT, H.E.S.S. and the Cherenkov Array Telescope sensitivity to neutrino signals and show that we have already entered into a new era where gamma-ray telescopes are more sensitive than neutrino detectors to neutrino lines from dark matter annihilation with the potential to distinguish the flavor of the final state neutrinos.

Presenter: Dr QUEIROZ, Farinaldo (Max Planck Institute for Nuclear Physics - Heidelberg)

Session Classification: DM
