

Antiproton Flux and Antiproton-to-Proton Flux Ratio Measured by with the Alpha Magnetic Spectrometer on the International Space Station

Friday, 15 May 2009 15:40 (25 minutes)

A precision measurement by AMS of the antiproton flux and the antiproton-to-proton flux ratio in primary cosmic rays in the absolute rigidity range from 1 to 450 GV is presented based on 3.49×10^5 antiproton events and 2.42×10^9 proton events. The antiproton-to-proton flux ratio reaches a maximum at ~ 20 GV and is rigidity independent above 60.3 GV

Presenter: Dr XU, Weiwei (Massachusetts Institute of Technology)
