

Gamma-ray Signatures of Dark Matter

Saturday, May 16, 2009 11:55 AM (30 minutes)

I will briefly review the different ways in which Dark Matter (annihilations or decays) can produce high energy photons, and then focus on some current interesting cases from the experiments (and their phenomenological interpretation).

Presenter: Mr CIRELLI, Marco (IPhT CNRS CEA/Saclay)

Session Classification: Particle and Astroparticle
