

## **Recent results in gamma-ray astronomy with the ARGO-YBJ detector**

*Friday, 15 May 2009 17:40 (25 minutes)*

The ARGO-YBJ air shower detector has been in stable data taking for five years at the YangBajing Cosmic Ray Laboratory (Tibet, P.R. China, 4300m a.s.l.) with a duty cycle >86% and an energy threshold of a few hundreds of GeV. With the scaler mode technique, the minimum threshold of 1 GeV can be reached. In this talk recent results in gamma-ray astronomy will be presented, including those from 4.5 years of observations of the blazar Mrk 421 in common with the Fermi satellite.

**Presenter:** DI GIROLAMO, Tristano (NA)

**Session Classification:** g-rays
