

WA 1 – Beam Physics

Cristina
Vaccarezza
May 30th 2022

On going actions

- S2E finalization for :
 - 30 +200 pC at 1-1.2 GeV
 - basic (now at HE TL)
 - w X-band at Gun exit
 - w ramps at plasma in-out
 - LE&HE virtual diagnostics
 - 50 +230 pC at 1-1.2 GeV
 - basic (now at Linac exit)
 - w X-band at Gun exit
 - w ramps at plasma in-out
 - LE&HE virtual diagnostics
- X-band at @Gun finalization
 - 200-300-500 pC beam

Outcome closed actions & Decisions

- Photoinjector actual layout:
 - (3m + 3x2m) S-band
 - X-band structure=9 cells
-> space after Gun allocated
 - Phase Locker space allocated

To Do

- Finalize plasma focusing w ramps
- Cluster evolution of Power9 setup ~ 57 k€ ⇒ 3D PIC (AlaDyn)
- Finalize 2nd transfer line to ARIA undulator
- Finalize spectrometers & dumpers
- 50+500 pC plasma WoP

WA 1 – Beam Physics

Upcoming milestones

Reasonable milestones:

- **November 2022** end: S2E completion (30-50 pC Witness at 1.-1.2 GeV w preliminary stability considerations)
- **May 2023**: Stability&jitter sensitivity studies plus virtual measurements: critical both for people and computing resources availability (RFD specs input)
- **June 2023**: Laser heater parameters w mbi studies for all RF beam: critical for people resources availability

Potential risks

Right now:

- WP1 = 0.6+0.9 FTE (average with SPARC – ELI_NP-INFN-MI activities)
- WP2 = 0.7 FTE (average with SPARC activities -> 0.5 w SPARC restart)
- WP3 = 0.6 (average w SPARC-INFN-MI activities)
- TOT=2.8 FTE
- **Risks: slow recruitment and/or further lack of personnel**
- **No cluster upgrade for Power9**

Good news:

2 PhD students, maybe 1 people from TS, Shpakov partial relief from SPARC operation responsibility.

General Status

Business re-adapted
But some issues might become critical

S2E status & Tasks
